As it is some individuals who constitute governments and as they are human beings, they are morally and intellectually as fallible as other human beings. It is not axiomatic, therefore, that such persons are incapable of acting from bad motives. Hence, if in some circumstances some motive of action or inaction appears very probable and reasonable, the imputation of such motive cannot be morally wrong. It may, no doubt, be legally wrong all the same, and therefore punishable.

But the punishment of such imputation of bad motives is not a sufficient remedy. It ought to be proved that the persons accused of such motives were not guilty of them. Otherwise, though a few persons may

be punished for openly imputing bad motives to the Government, the public at large would continue to believe in such bad motives. It may be that the duty of the judges is simply to punish persons who are guilty of any legal offence, it is not their duty to convince the public that the Government was not guilty of wrong motives. In that case, it ought to be the duty of some other officers to prove the innocence of the Government. As that is not done, in spite of punishments inflicted on many persons guilty of sedition that offence continues to be committed. For there will always be persons who will not be deterred by fear of punishment from saying and writing what they consider to be true. A more effective means of preventing them from saying and writing such things is to prove the falsity of their belief.

—

Punishable Words, Unpunishable Actions

The following paragraphs, taken from *The Leader*, show that while in India mere words are punished in Britain and Ireland preparations for rebellion were not punished.

The *Sunday Times* is publishing extracts from Sir Charles Catwell's biography of Field Marshal Sir Henry Wilson which show that he was actively engaged in the consultations for organizing a rebellion in Ulster while director of military operations at the War Office. Among the important personages involved in this interesting pastime were Lord Stamfordham, Lord Roberts, Lord Milner and Mr Boscawen. Early in 1913 Sir James Craig came over from Ireland with the complete plans of the proposed Northern Ireland rebellion. This was what Sir Henry Wilson wrote in his diary at the time —

"Jimmy arrived having come over on deputing to Boscawen. He told me of the plans for the North of the 25000 armed men to act as cavalry and 10000 men to act as constables, of the arrangements for the banks, railways etc., election provisional government and so on. As far as I could judge all very sensible."

Three days earlier he was asked by Lord Roberts if he, the paid servant of the Crown and of the British Army would take a position of the chief of staff for the insurgents in the event of an Ulster rebellion. Here are his exact words in his diary —

"Dined at Almond's Hotel with the chief, Atleen and Ladyship. He is just back from his speech at Wolverhampton which was a great success. He told me he had been approached to know if he would take command of the army in Ulster and if he could get me to go as his chief of staff and he wanted to know if I would I said that if the alternative was to go and shoot down Ulster or shoot for Ulster I would join him if he took command. Imagine our having come to such a state."

Lord Roberts ultimately decided not to lead the Ulster rebels. Those opposed to Irish home rule achieved their object by threats and intimidation and the occasion for the rebellion did not arise. In 1913 in the words of the *New Leader* the leading Tories were openly engaged in equipping a rebel army suborning the armed forces of the Crown bullying the King and generally organising disloyalty and insurrection. It further remarks: "These are the patriots many of them still living and talking who are now prating of constitutionalism. The Conservatives however much they may talk of law and order loyalty to the Crown discipline of the army and constitutionalism will not hesitate to resort to unconstitutional methods if it suits their purpose. This is the moral to be drawn from the startling facts disclosed in Sir Henry Wilson's diary."

suit the taste and convenience of lip reformers and dilettante destroyers of untouchability? How is it that no mention has been made of the Brahma Missionary Mr V R Shinde, the founder and for years the chief worker of the Depressed Classes Mission Society? How is it that no mention has been made of the work of Mr K. Ranga Rao of Mangalore? How is it that the work of the Arya Samaj and of many of its energetic and self-sacrificing workers has not been referred to? Nor that of the Abhaya Ashram? The Theosophical Society in the days of Col Olcott and Madame Blavatsky did similar work. But we need not try to prepare an exhaustive list of workers and organisations in this field for we do not know all that has been done.

Pandit Malaviya on untouchability

The Guardian of Calcutta writes —

In early July an untouchability conference was held in Bangalore at which representatives from South India were present a part of the country where the problem is most acute. Among the spectacular events was the visit paid to and the speech delivered by Pandit Madan Mohan Malaviya. It was a courageous speech and one filled with hope. The Pandit declared that a retrospect of the last twenty years would reveal the very changed attitude which had come over the country and the Hindu community regarding the Untouchables. The reasons were threefold. In his opinion, our missionary friends deserve all the credit in this connection for having laboured in this cause in many places in the country. In the second place the life and teaching of Mahatma Gandhi had had a remarkable influence on the removal of untouchability. In the third place a revolutionary change had taken place in the mental attitude of the thoughtful classes throughout India. Pandit Madan Mohan is perfectly right in his estimate of the influences at work, but in our opinion he overlooked in his speech the influence of the Hindu social reformer himself whose activities though less spectacular than Mahatma Gandhi and inferior in a multitude of Christian Missions achieved a success in the intellectual and moral plane which must never be forgotten. We would refer to the work of Ranade and in our own time to Mr K. Natarajan who for over thirty years has carried aloft the banner of freedom of the depressed classes.

Broadcasting in India

The opening by the Viceroy at Bombay of the beam wireless service and the station of the Indian Broadcasting Company supplied Lord Birkenhead with an occasion for making a speech in England, in the course of which he said:

I ask you to visualise the day not, I am confident so distant as the sceptic might suppose when in every village of the countryside there will be men, women and children listening through the medium of their own vernacular to the true story of the day to day happenings of the world and to the expression of quickening thoughts and ideas which but for this conquest of the other world would never reach them. It is a truism that in spite of the great progress during the past century the never-to-be-satisfied need of food is still for education and yet more education, not only for her children and youth but for her adults as well. It is because I believe that by inaugurating this service the Indian Broadcasting Company is throwing open the sluiceways of education and enlightenment to flood the areas which have hitherto seemed almost beyond their reach that I so heartily wish the company and its supporters prosperity.

The truth and beneficial character or otherwise of the story of day to day happenings of the world would depend very much on the teller of the story. We do not want to know contemporary history in the way we are taught the past history of India in our schools from British-made books. If we could make and use broadcast casting apparatus ourselves, tell the stories ourselves that would be a different matter. No self-respecting people can feel pleasure or pride in occupying the position of mere recipients of benefits from masters and patrons.

It is provoking and absurd to talk of "the great progress [in education] during the past century" in India. And why is India's need for education "never-to-be-satisfied"? It is true, of course, that no country can at any time be said to have received enough education. But in that sense each and every country's need for education is "never-to-be-satisfied," insatiability as regards education is not a peculiar characteristic of India. Or, has Lord Birkenhead in an unguarded moment betrayed his inmost desire that India should ever remain subject to Britain, tantalised with hopes of the life-giving waters of knowledge but never given a sufficient quantity of it?

Unless the highest scientific and technical education is made available to Indians, unless large numbers of Indians themselves can do their own broadcasting, it is bound to remain a luxury for the few. If the millions of India remain steeped in illiteracy and ignorance, how can they understand and benefit by "quickeniog thoughts and ideas"?

It would have been tolerable if Lord Birkenhead's speech had merely fallen flat on us. But it is irritating.

Did not the absurdity of making a grandiloquent speech on the occasion of a very belated opening of a single broadcasting station for a vast area strike Lord Birkenhead's mind?

Under British rule in India, the opening of the 'since gates of education and enlightenment' cannot very often fail to be the opening of the since gates of official propaganda.

Political Prisoners in Russia and India

Describing the lot of socialists in prison in present day Russia, *The Manchester Guardian* writes —

The agents of the G P U (the Cheka) make arrests without a warrant. As a rule there is no trial and no possibility of defence. The arrested man or woman is sent to prison or exile without any kind of legal procedure, simply by an administrative order. The system somewhat resembles that of the *lettres de cachet* which flourished in France under Louis XIV.

How people are blind to their own faults! *The Manchester Guardian* ransacks past history for a parallel and finds it in France under Louis XIV! Why, under its very nose, so to say, there are to-day scores of Bengalis imprisoned or interned without any kind of trial! We suppose such things are very wicked in Russia and smack of barbarism.

But in the British Empire they are proofs of humanity and enlightenment. The British journal states that in Russia the sentences are indefinite. That is the case in India, too. The mental torture of this indefiniteness has unhinged many minds, leading some to commit suicide. Others have fallen a prey to fatal maladies.

Profession, Not Practice

In reply to the Muslims' claim for a share of the appointments in the public services proportionate to their numbers in Bengal, the Governor of Bengal is reported to have said at Khulna —

No government could override the claims of efficiency of the public services in an endeavour to secure a mathematically proportionate representation based merely upon population. It should be the Government's unremitting aim to attain a position where it should no longer be necessary to secure by safeguards the special representation of any particular community.

Sir Stanley Jackson knows that Muslims have been given a fixed proportion of posts in many services, irrespective of the fact of the existence of far better qualified candidates among non-Muslims. Even in the Indian Civil Service the system of nomination has been introduced in recognition of what are called communal claims.

Floods in Gujarat and Kathiawar

The floods in Gujarat and Kathiawar have already caused such terrible devastations and had assumed such alarming proportions that it is some relief to learn that the waters are subsiding. Relief workers are already busy in many centres in giving all the help they can. We hope and trust contributions to the relief funds will be sent from all parts of India.

Satindranath Sen Goes to Jail

Satindranath Sen, leader of the Patuakhali Satyagraha movement, has preferred imprisonment to binding himself down to keep the peace and giving securities. He has done what was expected of a man of his high character. To have bound himself down to keep the peace would have been indirectly to admit that he had criminal tendencies.

The trying magistrate paid high tributes to his character and self sacrifice but inconsistently enough did not acquit him. That Indian magistrates should have to write judgments like the one written by Mr J K Biswas is a tragedy and a source of humiliation to Indians.

The Registration of Graduates

The Educational Review of Madras gives the following comparative statement of the fees charged by different Indian Universities for the registration of graduates —

Name of the University	Initial fee	Annual fee	Late fee	Compound- ing fee.
Calcutta	Rs 10	10	10	150
Patna	5	5	10	40
Allahabad	5	2	10	20
Punjab	10	2	10	25
Bombay	3	2	2	10
Madras	3	1	10	5

The journal adds —

These figures are not a correct guide however to the relative charges as the facilities in the shape of the supply of publications and other things differ in the various Universities. Apart from the fees charged for registration there is also the question of other restrictions imposed on the graduates. In all Universities there is a restriction with regard to the number of years which should elapse before a graduate can be eligible for registration. The figures with regard to the years standing required by the various Universities are given below

Calcutta	Ten years.
Punjab	Ten years
Madras	Seven years
Patna	Six years
Allahabad	Three years

Progressive and Independent Siam

A recent issue of the London Times gives the following account of the "new standing of Siam" in the family of nations —

With the exchange on March 25 last of ratifications of the treaties with Belgium and Luxembourg the last of the Consular Courts in Siam were closed and two days later the new

Customs tariff came into force. The attainment of fiscal and jurisdictional autonomy coincided with the Siamese New Year and at a State banquet in Bangkok the King referred to these developments.

Addressing the leading Princes and officials His Majesty said that Siam had attained a new standing among the nations a position for which she had laboured long. The first three kings of the Chakri dynasty had fought against the enemies on their frontiers as in olden days. The danger that had to be guarded against came from possible foreign invaders. Then came a new danger springing from the country's more intimate connexion with the European nations if unprepared for that eventually. That danger Siam's neighbours were unable to resist and they succumbed and became dependencies of European Powers. Siam alone was able to save her independence thanks to the sagacity and ability of the second three kings of the dynasty. It was to be regretted that King Rama VI who had carried this development to so near its end had not lived to see the completion of his labours.

On an altar in the room were placed the golden caskets containing the relics of the three preceding kings—Mongkut, Chulalongkorn and Rama VI—placed there His Majesty said that they might all make as it were an offering to those august predecessors of the knowledge of what their labours had now accomplished an offering too of love and devotion. Before the altar His Majesty prayed for a blessing on all his people and that they might have the strength and will to work steadily for the further advancement of Siam.

We suggest that the Government of India should appoint a worthy Indian statesman to represent India in the court of Bangkok. There are several tens of thousands of Indians now residing within the kingdom of Siam, and there is a traditional cultural relation between India and Siam. It is necessary that some scholars chosen by the Greater India Society should go to Siam as India's cultural representatives to promote Indo-Siamese friendship. Will the Hindu University or the Calcutta University or the Visvabharati invite a Siamese scholar to give a course of lectures on Siamese history and civilization? Will the All India National Congress send a proper message of congratulation to the King and the people of Siam for Siam's assertion of full sovereignty as an independent Asian State?

UNITY

By SAROJINI NAIDU

Love if I knew
How to pluck from the mirrors of the dew
The image of the sunrise rob the tint
Of living blood
From the wild hly and pomegranate bud,
Deft and the halcyon of its purple ghnt,
The sea wind of its wing,
The sea-wave of its silver murmuring,

If I could teach
My meaning to be severed from my speech,
Breath from my being, vision from my eyes,
And deftly part
The tremor of my heart-beat from my heart,
Perchance for one vague hour I might devise
Some secret miracle
To be delivered from your poignant spell.

You permeate
With such profound, supreme and intimate
Knowledge, possession, power, my Life's domain !
O are you not
The very text and title of my thought,
The very pattern of my joy and pain ? . . .
Shall even Death set free
My soul from such intricate Unity ?

LOSS OF FREEDOM AND THE GENIUS OF A GREAT NATION

By J T SUNDERLAND

THE terrible fact seems to be that India's loss of freedom has for nearly two centuries practically deprived the world of one of its greatest and most important nations—turning this historic and renowned people into (if I may be allowed the figure of speech) a stagnant pool giving forth almost nothing of benefit to mankind instead of allowing it to be what, if free, it would have been a great flowing river pouring the abundant waters of its activities and genius (its industries of many kinds, its manufactures, commerce, material wealth, art, science, rich intellectual and spiritual life) into the great and growing civilization of the modern world. How can any intelligent mind fail to recognize this loss as a calamity to mankind of the first magnitude?

British rule in India has been very significantly compared to a banyan tree. Under a banyan tree little or nothing can grow. The tree overshadows and kills essentially everything beneath it. The only growths that can live and thrive are the stems or slender branches sent down to the ground from the tree itself; these take root and develop, nothing else can.

So in India everything that has any chance of life is what comes down from the all powerful, all overshadowing "Banyan tree government."

Here we have the strongest of all reasons why the Indian people desire to escape from foreign domination. They feel that their very life depends upon their gaining freedom to stand on their own feet, to be men and not slaves or nonentities, to think their own thoughts, to follow their own ideals, to cultivate their own national and racial genius, to develop their own important civilization, to shape their own destiny, as they can never do under the chilling, discouraging, dwarfing, character-weakening initiative killing ambition, destroying, hope blighting shadow of the banyan tree of a haughty, unsympathetic and despotic foreign government.

Professor Paul S. Reinsch says in his work on "Colonial Government —"

The essential thought in dealing with native societies should be that they must not be deprived of their morale and of the feeling of responsibility for their own destiny."

Here England has failed absolutely and disastrously in her treatment of the Indian people. She has taken their destiny out of their hands into her own. Politically she rules them wholly. Financially and industrially they feel that they are constantly at her mercy. The influence tends to break their spirits. There is no incentive for ambition. Young men, no matter what their talents or education, have little or nothing to look forward to. A situation more depressing it is hard to conceive. England tries to justify herself by the claim that she can rule the Indian people better than they can rule themselves. This is the claim of autocracy the world over.

What tends most surely to destroy the physical strength of a man is the absence of the possibility of physical exercise. The most brilliant minds may be reduced to dullness, and the most powerful to weakness, owing to lack of opportunities for activity. Just so nothing else so effectually weakens and degrades a people as the loss of liberty and the power of self direction. The highest end of government is not law, it is not even order and peace. These may be present under the most monstrous tyranny. The highest purpose of government is the creation of the capacity for self government. The sufficient condemnation of all vassalage and of all government of weaker peoples by stronger is, that thus the weaker peoples are deprived of their right to plan for themselves, and to work out their own self development.

This is something which the better minds of India feel very deeply. Especially is it felt by ambitious, earnest, educated young men who want to make the most of their lives who desire to do something for their communities and their country, and to be come leaders in movements for social, industrial, educational, political and other reforms.

On every hand such young men are met

by the fact that neither they nor the people are free. They are for ever under foreign masters. If they make plans for public improvements, their plans can come to nothing without the assent and co-operation of the Government, because it has all power. The very fact that the plans are initiated and carried on by Indians—by "natives," is most often likely to be regarded as a sufficient reason why the Government should ignore or oppose them. The Government wants it understood that it never follows "native" lead, it never welcomes, or if it can help it, even tolerates, native initiative, unless for the sake of policy it has to do so in comparatively small matters. That would lower its "dignity." That would destroy its "prestige." The government stands on the lofty height not only of supreme power, but of supreme wisdom, and it cannot stoop to be instructed or directed even to have suggestions made to it, by the "inferior" people of the land, who, of course, do not know what is good for them or what the country requires.

Thus initiative on the part of the people is chilled and killed. They soon learn to say, "What is the use?" Educated young men who in free lands where the people have a voice, would look forward to influential public life, to careers of public usefulness and service to doing something of value for their country, have in India little or no such possibility before them. They have no country. The English rule it, monopolize it, treat the Indians as strangers and foreigners in it. King George calls it, "My Indian Empire." And when Indians presume to interest themselves wholeheartedly and earnestly in public matters and make suggestions as to reforms and improvements which in any quite vital way touch politics, they may find themselves in danger of being arrested and sent to prison as pestilent "agitators" and "seditionists" or if they escape that, then they are likely either to be ignored, receiving no co-operation and no encouragement from the superior powers, or else they get the virtual reply "Mind your own business. Who are you, that you presume to teach us how to manage this country?"

Sir Henry Cotton tells us that the British policy in India has always been to discourage and so far as possible to suppress native ability and native initiative. He tells us of hearing Sir William Harcourt say in a speech in the House of Commons

"The officials at the head of the Government of India have never encouraged men of ability and force of character. They have always hated and discouraged independent and original talent, and have always loved and promoted docile and unpretending mediocrity. This policy they have inherited from the Roman Tarquinius Superbus. Although they have not actually 'cut off the heads' of the tall poppies, they have taken other and more merciful means of removing any persons of dangerous political eminence."

I shall never forget an experience I once had in Ponna. I was there attending the session of the Indian National Congress. One afternoon I went out for a stroll with a company of young men who were students in the Fergusson College. After walking an hour or so we all sat down under a great tree for a long talk. They were keen-minded, earnest fellows, all of them desirous of making something worthwhile of their lives, and all ambitious to serve their country. But in a land where everything was in the hands of foreign masters, how could they do either? If, ignoring their country's needs and forgetting her sorrows, they would consent to be docile servants of their alien rulers, shaping their education so as to fit themselves for employment as clerks, accountants and subordinate helpers of one kind or another in the offices of the Government or of British merchants, then places would be opened for them where they could gain at least a meagre living with the hope of some slight advancement later, and thus their paths for the future would probably be fairly smooth.

But if, standing on their own feet as men, they determined to shape for themselves independent careers, and to make their lives of real service to the land they loved,—what was there for them? This was the pathetic, the tragic question, asked by all those young men, again and again and again. The Government had many low positions—too low to be accepted by Englishmen—to offer them, and a very few fairly high ones. But all persons permitted to occupy these positions must give up their patriotism and their manhood, keep out of politics, be loyal to the alien Government, that is, must not criticise it or advocate any vital reforms, and be dumb and docile servants and satellites of their British lords. Could those earnest, patriotic, splendid young sons of India, of the holy "Mother" whom they loved and worshipped, stoop to this humiliation and this shame?

Alas! that afternoon I realized as I never had done before how bitter, bitter a thing it is for educated young men, in whose breasts burn the fires of a patriotism as true and as holy as was ever felt by any Englishman or American, to know that they have no country, to realize that their country, as dear to them as their lives, has been taken by force and is held in subjection by the sword of the foreigner!

This Poona experience illustrates and emphasizes the undeniable fact that one of the very grave evils of British rule in India is its influence in crushing out the native genius of the Indian people—thus robbing not only India but also mankind of something very precious. There is nothing in the world that is of higher value, and therefore that should be more sedulously guarded than genius—the peculiar genius of nations and of races, and there is nothing which when destroyed is a more serious or a more irreparable loss.

Writes James Russell Lowell

All nations have their message from on high
Each the Messiah of some vital thought
For the fulfilment and delight of men
One has to teach that labor is divine
Another freedom and another mind.
And all that God is open eyed and just.
Aye each a message has from God's great heart.
And each is needed for the world's great life

Who can estimate how great would have been the disaster to humanity if, by foreign domination or otherwise, the genius of Greece had been cut off before it reached its splendid flowering in art and literature?

I will not compare the genius of India with that of Greece, although some eminent scholars both in Europe and America have done so. But I will say, what no one will deny, that no other nation in Asia has shown in the past so rich and splendid an intellectual and spiritual genius as India has manifested in many forms and throughout a long series of centuries. That genius should be preserved, fostered, and developed, not only for the sake of the Indian people, but for mankind's sake, for civilization's sake, as a precious contribution to the world's higher life.

How can this be done? What is the indispensable condition of the efflorescence, nay, of the very existence of genius anywhere? It is freedom. But India is not free. This is her calamity, it is also the world's calamity. So long as she continues to be humiliated, crippled, emasculated by being held in bondage to a foreign power, by being robbed of her proper place among the nations, by being deprived of the right to direct herself and shape her own career, it will be impossible, in the very nature of things, for her genius to rise to its best, or anything like its best, and thus for her to make that important intellectual and spiritual contribution to the world's civilization that her past history gives the world the right to expect and demand. Thus we see that India's freedom is a matter of concern not to herself alone, but to mankind. Her bondage is a world disaster—an offence against the world's higher life.

ISHWARCHANDRA VIDYASAGAR AS AN EDUCATIONIST

(Based on unpublished State Records)

By BRAJENDRANATH BANERJI

IF the 18th century saw a revolution in the political history of Bengal, the 19th century saw another and equally far reaching revolution in our life and thought. This second change has been rightly called the Renaissance of India. At the time of the English conquest, not only were our indigenous kingdoms in utter dissolution, but

our society also was decayed and our medieval civilization was dead. The old order was dead but the new order did not come into being till seventy five years after the battle of Plassey, i.e. in the age of Lord William Bentinck.

This beneficent revolution in intellect and morals received its start from Rajah

Rammohun Roy It went on gathering force and volume till it created a new literature a new faith a new social organization and a new political life—in short, a new civilization in India.

In the intellectual sphere it took two forms first the acquisition of the new learning and scientific method of the West, and secondly the recovery of the literature thought and spirit of our ancient forefathers in their true and pure original form. In both of these fields Ishwarchandra Vidyasagar took a leading part. He was not only the first great critical Sanskrit scholar among the modern Bengalis he was also the founder of vernacular education on sound modern lines and the creator of the first English college conducted entirely by Indians. Great as Vidyasagar admittedly was as a social reformer and philanthropist he was not less great as an educational pioneer in two very important and untrodden fields. A study of this aspect of his career from original records is therefore a source of instruction to us who are easefully reaping where he sowed with so much toil and anxiety.

Ishwarchandra was born on 26th September 1820 at the village of Birsingha in the district of Midnapur. He gave promise of future greatness at a very early age. Following the tradition of his family his father Thakurdas Banerji considered it his duty to educate the boy in the Sanskrit lore. Ishwarchandra, when 9 years of age was admitted (1 June 1829) into the Government Sanskrit College in Calcutta, where he studied 12 years and 6 months and made himself thoroughly proficient in grammar literature rhetoric, arithmetic, logic theology and law. His college career was all along brilliant and when at the age of 21 he left the Sanskrit College (early in December 1841) his Professors marked their high appreciation of his uncommon merits and attainments by bestowing on him the title of Vidyasagar or Ocean of Learning.

Soon after leaving college Vidyasagar secured employment in the literary and educational line in which he was afterwards to become so pre-eminent. On the death of Madhusudan Tarkalankar on 9th November 1841 the office of the Sherishtadar of the Bengali Department in the College of Fort William became vacant and Ishwarchandra stood as a candidate for the post. Capt Marshall the Secretary of this college who very much identified himself with the

activities of the Government Sanskrit College also was aware of Ishwarchandra's brilliant career as a student and recommended him to the Government in the following terms:

2 I beg to recommend, for the situation of Bengali Sherishtadar Ishwarchandra Vidyasagar whose acquirements are similar to those of the late Sherishtadar as appears by the two mentioned certificates which he holds:—

1st A certificate from the Government Sanskrit College of very good proficiency in every branch of literature taught at that institution [Dated 4th December 1841]

2nd One from the Hindu Law Committee of eminent knowledge of Hindu law and qualification to hold the situation of Law Pandit in any of the Court of Judicature and

3rd One from the Examiners of the College of Fort William of qualification to instruct these students in the Sanskrit and Bengali.

Ishwarchandra possesses also a moderate knowledge of English of which he acquired the rudiments in the English class of the Sanskrit College but he was unable conveniently to improve his knowledge after the abolition of that class. He bears a high character for respectability of conduct and for industrious habits.

Government approval of the selection and Vidyasagar was appointed to the post on 20th December 1841 on a monthly salary of Rs 50. This was the starting point in the active career of the greatest educationist of modern Bengal.

Capt Marshall was highly pleased with the work of his Sherishtadar indeed he found in him a very useful hand. The more he came in contact with the Pandit, the more he was charmed with his keen intellect, profound knowledge, bold and persistent spirit, untiring energy and above all his excellent character. While in the College of Fort William Vidyasagar came into close touch not only with the best Englishmen in Calcutta, but also with many respectable Indians. It was through Capt Marshall that Dr Mouat, the Secretary to the Council of Education first came to know Vidyasagar and he afterwards became his benefactor through life.

Vidyasagar's appointment in the Fort William College was really a turning point in his career as it induced him to undertake a thorough study of English in which language he soon became remarkably proficient.

In 1846 the Government Sanskrit College lost two of its worthies Rammankya Vidyalankar Assistant Secretary and Pandit Jai

* Letter from G. T. Marshall, Secretary of the College of Fort William dated 24th December 1841 to G. A. B. by Secretary to the Government of Bengal General Dept. No. 10 Miscellaneous is No. 574 Vol No 1 pp 23 also p 124

is with Arab, the Council would have preferred his appointment as Head of the Sanskrit College but as this is out of the question the Council are compelled to adopt such means as are available.

They therefore suggest that the Sanskrit College be placed on exactly the same footing as the Madrasa by the creation of the office of Principal and the abolition of the offices of Secretary and Assistant Secretary.

For the office of Principal by far the fittest person known to the Council or in whom well acquainted with the subject whom they have consulted is Pandit Ishwarchandra Sharma who has been recently appointed to the Professorship of Sahitya. He is not only a first rate Sanskrit scholar but is well acquainted with English and is considered the most elegant Bengali scholar in the Presidency.

His translation of *Chambers's Biography* and the *Belal Panchabingshati* are used in all the Government colleges and schools in Bengal as text books and he has, for several years past conducted the Sanskrit College Scholarship Examinations to the entire satisfaction of the Council.

He is in addition a man of an amount of decision and energy of character rarely met with in a native of Bengal—qualities essential to the proper discharge of the functions of a Principal.

His appointment would vacate the chair of Sahitya, to which the Council recommended the present Assistant Secretary (Shrishchandra Vidya-ratna) who was the second candidate on the 1st when Ishwarchandra succeeded Madanmohan Tarkalankar.

These changes will involve no increase of expense as the salaries of the Secretary and Assistant Secretary amounting to Company's Rs. 100 per mensem will suffice for the remuneration of the Principal and the new Professor of Sahitya would draw the existing salary of that office.

Pending the sanction of Government to these changes the Council have relieved Babu Rassomoy Dutt from the duties of Secretary and placed the control of the college in the hands of Pandit Ishwarchandra Sharma.*

Government sanctioned the Council's proposal (22 January 1851)† The offices of the Secretary and Assistant Secretary were abolished and Ishwarchandra Vidyasagar was made Principal of the college on a monthly salary of Rs. 150 from 22nd January 1851‡ The suggestions contained in the report submitted by the Pandit were approved by the Council and ordered to be adopted in the next session October 1851—September 1852

† *Education Con.* 29 January 1851 No. 4

‡ Letter from the Under-Secretary to the Government of Bengal to Pandit Ishwarchandra Sharma, dated 22nd January 1851—*Education Con.* 29 January 1851 No. 4

In fact, the Council of education seem to have given him full powers at this stage to remodel, reform and simplify Sanskrit education.

The history of the Sanskrit College for the years 1851 to 1853 is virtually the history of the re-organization effected in it by Vidyasagar, who had to work hard in order to raise this seat of Hindu learning in the public estimation and to place it on the more efficient footing required by the general advance of education in the country*.

The laxity of discipline in the college attracted his notice first of all. 'Strict and steady attention was now paid "to ensure regularity of attendance, to put a stop to students constantly leaving their classes on trivial pretences and to prevent needless noise talking and general confusion." He abolished the practice of closing the institution on the lunar days—Ashtami and Pratipad—twice every fortnight and fixed Sunday for closing the college once a week, as in other Government institutions.

The privilege of reading in the Sanskrit College had been confined to Brahman and Vaidya students only† but in July 1851 Vidyasagar, desirous of promoting education among all his countrymen extended it to the Kayastha caste, and finally, 10 December 1851 threw its doors open to respectable Hindus of all castes without restriction.

In January 1852 Vidyasagar brought the claims of his institution prominently before the Council of Education in the hope that they would use their influence to induce the Government to afford that encouragement to the qualified passed students of the Sanskrit College which had already been extended to those of the Hindu College and the Calcutta Madrasa. He wrote—

It is well known that several distinguished pupils of the Hindu College, and some of the

* I have not succeeded in tracing the proceedings of the Council of Education (156 folio volumes) either in the Bengal Government's Record Room or in the office of the Director of Public Instruction which succeeded that body in January 1855. These records when unearthed will bring to light much interesting correspondence and many reports of Vidyasagar relating to the re-modelling of the Sanskrit College during the years 1851-54. I have of course, read the letters addressed by the Council to the Bengal Government on matters which necessitated a reference to it.

† Vidyasagar dealt fully with the injustice of this restriction in his report to the Council of Education dated 30 March 1851 (S. C. Mitra's *Vidyasagar* p. 91).

Madrasa have been honoured by Government with appointments as Deputy Magistrates but such favour has in no instances been extended towards the pupils of the Sanskrit College. Though the majority of these pupils it must be admitted are not in affluent circumstances, still it must be borne in mind that they are all drafted from the most intelligent and respected classes of the Hindu community and that not a few among them enjoy an indisputably high and respectable position in native society. There is, however, no doubt that the education received at the Hindu College is superior and it is to be expected that the students of that institution should receive greater consideration. But I would beg leave to submit, that the qualifications of the students of the Sanskrit College are at least equal to those of the students of the Madrasa. In both cases the study of a classical Oriental language forms the basis of the educational course and a fair proficiency in English is encouraged as an adjunct which is attained by a few in each of these institutions. The Sanskrit College has however one important advantage over every other collegiate establishment. The course of study here adopted enables its students to acquire a thorough knowledge and a complete mastery of the Bengali language in which the business of the mortals is transacted.

Under the circumstances I trust I may be excused for bringing thus prominently the claims of the institution under my charge to the notice of the Council of Education whose powerful influence I hope may be used to induce the Government of Bengal to show that consideration and to afford that encouragement to the Sanskrit College which have already been extended to other educational institutions. The principles of equal and impartial but discriminating encouragement to the several Government colleges being once admitted it would not be difficult to select a few well educated and students of the Sanskrit College who would be found in every way qualified to enter the service as Deputy Magistrates.

Although the subject was necessarily beyond the jurisdiction of the Council, yet in deference to the ability and zeal of the Principal in advancing the interests of the institution over which he presided, they did not deem it right to withhold his communication from the Government†.

The Government gave a favourable reply and the Council was informed that the claims of qualified students from the Sanskrit College would be considered equally with those of the scholars of other institutions§.

* Letter from Ishwarchandra Sharma, Principal of the Sanskrit College, to F. J. Mount, Secretary to the Council of Education dated For William 13 Jan 1852—*Education Con* 15 April 1852 No.3

† Letter from the Secretary to the Council of Education to the Secretary to the Government of Bengal dated 13 March, 1852—*Education Con*. 15 April 1852, No. 2

§ Letter from the Secretary to the Government of Bengal to the Secretary to the Council of Education dated 15th April, 1852—*Education Con*. 15 April 1852, No. 4.

The Sanskrit College from its foundation in 1844 was a free institution and as such, was subject to many 'inconveniences and abuses. Vidyasagar now sought to remedy these evils.

It was the practice with some pupils to procure admission into the Sanskrit College and to run away in the course of a few months. Their guardians, finding the Sanskrit College a free institution used to get them admitted into it and to withdraw them as soon as they found opportunities of procuring for them an entrance to an English school. There were others again who frequently absented themselves without leave and thereby had their names struck off the roll. This was no sooner done, than they, or their guardians, importuned so much for re-admission that in many cases it became irksome to refuse the favour.

To guard against these practices, to effect a marked improvement in the regularity of attendance and to exclude the insincere pupils from the benefits of reading free, Vidyasagar introduced a fee of Rs 2 for admission or re-admission in August 1852. This measure was intended to gradually pave the way for the introduction of the school fee system, which came into force after 16th June 1854 when every pupil admitted was required to pay a fee of Re 1 per mensem, only a limited number of free studentships being reserved for poor boys. The introduction of the fee system had a beneficial effect on students of a vacillating nature, and gave the much needed impetus to improvement of educational institutions specially by enforcing regular attendance.

An improved system of study was set afoot in the Sanskrit College in November 1851. The Grammar Department was remodelled. Previous to November 1851, Bopade's *Mugdhabodh* had been used in the Sanskrit College as a text book. Young pupils, who had to begin their study of Sanskrit with this very difficult grammar written in Sanskrit, had to spend four or five years over it and, unable to comprehend its contents, they merely learnt by rote what their instructors said. Thus, when they proceeded to study the Sanskrit classics in the Literaturo Class they had not been so well grounded in the language as expected. Vidyasagar fully realized the difficulty of the students, and adopted the students' mother tongue as the medium of teaching Sanskrit grammar. He discontinued the study of *Mugdhabodh* and introduced in its place *Vyakarana Kaumudi*, or *Outlines of Sanskrit Grammar* written in Bengali, and three Sanskrit Readers (*Riyupath*),

gopal Tarkalankar, Professor of Sahitya (Literature) died in March and April respectively. They were pandits of great eminence, and their loss was severely felt, because orthodox pandits of such high repute could not be prevailed upon under the then uncertain conditions of service, to offer themselves as candidates for such appointments. Dr Mouat, Secretary to the Council of Education, consulted Marshall, Secretary to the College of Fort William, on the subject of appointing an Assistant Secretary for the Government Sanskrit College who must combine a knowledge of Sanskrit with that of English and be capable of effecting improvements in the existing condition of the college. Marshall at once recommended Vidyasagar for the post, thereupon the Council of Education appointed him Assistant Secretary of the Sanskrit College in April 1846 on Rs 50 a month. Vidyasagar was succeeded in the College of Fort William by his second brother Dina bandhu Nyayaratna a distinguished ex student of the Government Sanskrit College, who took up his duties on 4th April 1846.*

After Vidyasagar had joined the Sanskrit College, its Secretary, Rassomoy Dutt was willing to appoint him to the vacant chair of Sanskrit Literature (Sahitya). Although the acceptance of the post would have meant an addition of Rs 40 to his monthly income he declined it in favour of his old class-friend, Madanmohan Tarkalankar (Head Pandit Krisbhnagar College) who was accordingly selected.

Vidyasagar began his work in the Sanskrit College with great zeal. He soon drew up an improved plan of studies mostly from data furnished by the Secretary Rassomoy Dutt. Major Marshall, who had conducted the Scholarship Examination at the Sanskrit College in September 1846 remarked in his report on the performances of the competitors

The Assistant Secretary consulted me some time ago on a plan of study which he had prepared at a great sacrifice of time and labour. The suggestions therein contained appeared to me highly judicious and the scheme altogether seemed well adapted to produce order to save time and to secure to each subject of study the degree of attention which it deserves, as such I would beg strongly to recommend the Council to give it a trial. If I am not much mistaken the result would prove highly satisfactory.

The Secretary of the Sanskrit College submitted the chief recommendations contained

in Vidyasagar's report to the Council of Education, who approved of them. According to these recommendations, the period of study in the Sanskrit College was extended from 12 to 15 years, and some modifications were made in the routine and subjects of instruction*.

Unfortunately Vidyasagar could not continue long in the Sanskrit College. His drastic reforms made the Secretary nervous and when some of his suggestions were disapproved, Vidyasagar resented it. He had been honestly working for the well-being of the college and the moment he received a check in his reforming career, he lost all interest in his work. This was a trait of his character. A conscientious worker Vidyasagar thought it his duty to resign the office of Assistant Secretary, and repeated attempts failed to dissuade him from taking this step. He was a man of independent spirit and strong determination. He seems to have severed his connection with the Sanskrit College in the second week of July 1847 as we find from the records that Taranath Bachaspati, Professor of Grammar 1st Class officiated as Assistant Secretary from 17th July to 30th November 1847 in addition to his usual duties, for which he was allowed to draw half the salary of the Assistant Secretary, viz Rs 25, out of the savings effected†.

But Vidyasagar had really been an acquisition to the College of Fort William, and Major Marshall soon found an opportunity for reinstating him. The vacancy which Vidyasagar was asked to fill rouses our interest even at this distant date. Durgacharan Banerji of Taltola (the father of Sir Surendranath Banerji) was the head writer and cashier in the College of Fort William, but he had, in addition to his college duties attended the Medical College lectures as a casual student for some time and now resolved to set up as an independent medical practitioner. So he sent in his letter of resignation to Major Marshall on 16th January 1849. Vidyasagar succeeded Durgacharan on 1st March 1849, after depositing the necessary security of Rs. 5000, on a monthly salary of Rs. 80 §.

* General Dept Proceedings 10th April 1846 Nos 37-39.

In November 1850 the Sanskrit College lost another of its luminaries when Pandit Madanmohan Tarkalankar resigned the chair of Sahitya, on being appointed Provincial Pandit of the Murshidabad Circle. Ishwar Chandra Vidyasagar was appointed in his place. Vidyasagar was at first unwilling to accept this post, but Dr. Mouat induced him to consent on the understanding that the Council of Education would ere long vest him with the executive powers of the Principal.* This would find an excellent outlet for the energies of a man of his stamp, and it was a happy day for Bengal when he resigned the office of head writer and cashier of the College of Fort William on 4th December 1850,† and was appointed the Professor of Literature.

Immediately after assuming the chair of Sahitya Vidyasagar was directed (5 Dec 1850) by the Council of Education to draw up a report on the existing state of the Sanskrit College and to suggest measures for making the institution more efficient and useful. He accordingly framed (he tells us) as the results of a long and anxious consideration of the subject, a detailed report which advocated many changes in the system of the institution and on 16th December 1850 submitted it to the Council with the hope that the happy and speedy result under an efficient and steady supervision would be, that the college would become a seat of pure and profound Sanskrit learning and at the same time a nursery of improved vernacular literature and of teachers thoroughly qualified to disseminate that literature amongst the masses of their fellow countrymen.‡

Vidyasagar was just the kind of man of whom the Council stood in need at the time. His able report was of great help to them. They were seriously considering the question of re-organizing the Sanskrit College. And now the only obstacle to the accomplishment of this desire was removed by the resignation in December 1850 of Rasmoy Dutt, the Secretary of the college as well

be seen from the following letter of Dr. Mouat to the Bengal Government:

The Government is already aware, from my communication No 574 dated 27th March 1850 regarding the re-organization of the Calcutta Madrasa, of the principles which the Council of Education deem essential for the efficient control and management of the colleges entrusted to their charge. They are of opinion that the official heads of those institutions should be present within their walls during the working hours of the day that they should be capable of taking part in the instructive duties of the college, and be able to exercise a strict personal supervision over every department.

In regard to the Oriental colleges it is considered absolutely necessary that the controlling officers should be well acquainted with the language and literature of the respective institutions viz. Arabic, Persian and Urdu for the Madrasa Sanskrit and Bengali for the Sanskrit College.

The application of these principles has already received the sanction of the Government in the case of the Madrasa of which Dr. Sprenger the most eminent Arabo scholar in the country has been appointed the Principal.

It was the wish of the Council at the same time to have re-organized the Sanskrit College and to have placed it on exactly the same footing as the Madrasa, but a difficulty arose from the tenure of the office of Secretary by Babu Rasmoy Dutt, who could not consistently with the discharge of his other public occupations undertake the duties of Principal nor would he probably have been disposed to accept the office even if the Council had considered him eligible for it.

The office of Secretary has been held for the last ten years by Babu Rasmoy Dutt, who has discharged its duties as efficiently as could be expected from an officer unacquainted with or at all events possessing only a limited knowledge of Sanskrit whose whole day was occupied in the performance of arduous and responsible duties in another office and who could seldom or never have been present in the institution during its working hours or be able to rectify the abuses likely in such circumstances to occur.

The consequence of this has been that the discipline of the college has become relaxed little or no reliance can be placed in its registers of attendance there is some reason to believe that a fictitious system of admitting pupils to swell the apparent number on the rolls has obtained and the institution generally is not in the sound healthy efficient state which the Council desire.

It is already one of the most costly colleges in Bengal, as the students contribute no schooling fees toward its expenses.

Under a more vigorous and efficient rule it might be rendered of much service in the great movement now taking place to create a vernacular literature for Bengal, and to enrich the language of the Presidency.

The only obstacle to the re-organization of the college having been removed by the resignation of Babu Rasmoy Dutt, the Council beg to recommend the following changes for the sanction of Government.

Had there been an European officer available as well acquainted with Sanskrit, as Dr. Sprenger

containing graduated selections in prose and verse. The remodelled system* proved a

* This was noticed in the Council of Education's Annual Report on the Sanskrit College for the Session 18-23.

It is unfortunate that the detailed reports which the Council issued annually on the Sanskrit College, are not forthcoming. Copies of these reports used to be submitted by the Council for transmission to the Secretary India House, but they are not available here, although they can be

great success, and a student of ordinary ability did not require more than three years to complete the course.

Thus Vidyasagar solved the difficulties in the way of studying Sanskrit, but he had yet to reorganize the English Department.

(To be concluded)

read in an abstract form in the *General Report on Public Instruction in the Lower Provinces of the Bengal Presidency*.

POPULATION AND SUBSISTENCE IN INDIA

By C N ZUTSHI, M.A. (London)

IT is now more than a century since Malthus published his famous Essay on the Principle of Population in which he established the theory that in every country population tended to outrun the means of subsistence. He stated that population increased in geometrical progression while the means of subsistence increased in arithmetic progression and that such checks as wars, epidemics, famines and immorality only held in abeyance the danger of overpopulation. Malthus further argued that humanity would do well to restrict the growth of its numbers by having recourse to such social legislations as would be calculated to postpone the age of marriage and discourage improvident marriages. In other words he wanted people to voluntarily restrict the growth of population by Birth Control. It is needless to discuss whether Malthus was right, for, since he promulgated his theory much water has flowed under the bridge and time and experience have amply proved that although the exact mathematical data on which Malthus based his law may be misleading his main contention is true. The industrial nations of Europe had long ago reached their maximum limit of population and if they are able to support yet larger numbers it is because of their industrial advance that they have made and the political power that they have acquired which have given them an exclusive command over the surplus food products of other countries. Ultimately therefore, the population which a country can support must be determined by its food producing capacity.

Applying these tests to India we find that the state of things in this country is quite different. India is mainly an agricultural country. She has to meet her requirements by agricultural produce. She must produce

food stuffs sufficient to feed her teeming millions. Her industrial development is practically nil by the side of Europe, and before she reaches that level of development in her industrial products whereby she may be able to command the food stuffs of other countries, she must face the problem of having to feed her own population exclusively by her own produce. Let us now examine whether the total production of food grains is or is not sufficient to meet the total requirements of her population. Working out the actual numbers from the Census Report for 1921 there are in India—

99,832,096 men over 15 years of age	
91,657,077 women	
and 124,433,307 children under 15	
Hence at 2 lbs. per day of cereals	
per man we want	33,277,865 tons
1½ lbs per day of cereals per woman we want	27,044,979
1 lb per day of cereals per child we want	20,742,218

or grand total of cereal requirements 81,064,462 tons

Now the average (1900-1922) total grain resources of India are—

	(in million tons)	
Rice	32.3	less 2% exported
Wheat	8.7	13
Barley	3.3	
Jowar	7.2	
Bajra	3.5	
Ragi	3.2	10
Maize	2.6	
Gram	4.8	
Others	10.5	
Total	76.0	4.5

So a net available food grain supply in the country 71.5 million tons per annum.

But out of the total production we must deduct 10 p c.

by way of waste i e 76 million tons	
requirements for cattle i e 132 million tons	
for seeds	20
and exports	45

263

This gives us a total net available cereal supply in India on an average of 760-263 or 487 million tons against the total cereal requirements of 81 million tons odd. This means a deficit in food supply only of 40 p c.

From the above figure we are driven to the obvious and unavoidable conclusion that the Indian people are underfed. Or to give a mathematical turn to this statement we may say that either one in every three individual must go hungry or every one must eat one out of every three meals necessary to him. This is the condition of the Indian people which accounts for their progressive deterioration in physique and energy. The circle of their misery is complete. The Indian people cannot produce sufficient for keeping their soul and body together—what to say of providing other comforts of life—because they are lacking in strength and energy bordering as they do on the verge of starvation.

And yet the champions of British rule in India have maintained invariably that it has been of untold blessings to India that India is prosperous and contented and that Pax Britannica is largely responsible for better sanitation, peace, increased efficiency of hospitals in saving lives and better provision against famines. It is indeed an irony of fate that in this land of starvation and destitution these people should see signs of amazing wealth. It is not conceivable why these people should fight shy of the fact that it is Pax Britannica which has heaped upon a country—that cannot even feed its own people at the lowest standard—an enormous burden of taxes. Home Charges, heavy charge of costly administration—and what not—that only go to make the life of the people progressively miserable, driving them to the pitiless edge of destitution and suck the very life blood of the country. Let me quote here a few persons of authority who have studied the real conditions in India so as to unfold the real India to which the champions of Pax Britannica point with pride. Dr Snodgrass of New York, with whom India has been a subject of constant attention and study all his manhood years

in his recent book—'India, America And World Brotherhood' says,

As a matter of fact famines are really perpetual in India. Even when the rains are plentiful and crops are good, there is always famine somewhere in the land. When epidemics appear such as plague and influenza, depletion from life long starvation is the main cause of terrible mortality.

Sir Charles Elliot, long the Chief Commissioner of Assam says,

Half the agricultural population do not know from half years end to another what it is to have a full meal.

Said the late Hon Gokhale

"From 60,000,000 to 100,000,000 of the people in India do not know what it is to have their hunger satisfied even once in the year."

However the champions of British rule may try to deceive the people in India and outside India by guilting the pill the one solitary fact remains true in the words of John Bright who said

If a country be found possessing a most fertile soil and capable of bearing every variety of production, yet notwithstanding the people are in a state of extreme destitution and suffering the chances are there is some fundamental error in the government of that country.

The champions of Pax Britannica further maintain that there are still large tracts of fertile land in India which, when brought under the plough, will add to the volume of foodstuffs and India will then be able to support a larger population. The following figures from the Agricultural Statistics of India 1921-1922 may be quoted which tell their tale and may well form a basis for discussion on the contention of these enologists of British rule.

Area by Professional Survey	in 1921 22 606,619,000 acres
Area according to village papers	1921 22 663,508,000 acres.
Area under forest	1921 22 80,419,000 acres.
Area under culturable waste other than fallow	151,173,000 acres.
Area not available for cultivation	153,178,000 acres.
Area fallow land	50,504,000 acres.
Area sown (net)	223,184,000 acres.
Area irrigated	47,900,000 acres.
Area under food crops	215,008,000 acres.
Area under commercial crops	40,731,000 acres.

From these figures it is clear that one-third of the total area of the country is cultivated at all. Allowing for land not available for cultivation either because it is covered with forest or by roads, railways, canals etc. there is still a possibility of an equal area being available for cultivation. Taking the classic assumption underlying the

Ricardian theory of rent to be true let us suppose that this additional area will yield $\frac{2}{3}$ of the produce yielded by an equal area already under cultivation. Thus $\frac{2}{3}$ of 760 million tons total produce quoted above will be equal to 506 million tons and deducting 17.8 million tons i.e. $\frac{2}{3}$ of the total deduction 563 million tons quoted above and even assuming that the export of 10 million tons will remain the same we will get the total increase in production by 328 million tons i.e. 487 million tons plus 328 million tons equal to 811 million tons net cereal supply in India against an equal number of tons of her cereal requirements. It is thus clear that India will then be able to just balance her produce and requirements with the present population. But what will happen when after the maximum limit of production has been reached and the population has increased which is bound to? And then we must take into account the operation of the Law of Diminishing Returns the effect of which would be to tend to decrease the volume of production. Thus even if we bring the whole of the area available under cultivation the problem of keeping the numbers within the means of subsistence will ever remain unsolved. Sir James Card in his Report on the condition of India (dated October 31 1879) said

An exhausting agriculture and an increasing population must come to a dead lock. No reduction of the assessment can be more than a postponement of the inevitable catastrophe.

To this state of dead lock India is slowly but surely drifting.

What then is the solution of the population and subsistence problem of India which is a very perplexing one? In my mind three things occur. Firstly that the Indian people should adopt such practices as may give them command over birth control. This means changing certain social customs and I think India can ill afford to

do that as social custom and religious sanction have still a binding force in this country unparalleled elsewhere. Secondly Homn Rule which will be the panacea of all economic ills with which India is for long sorely afflicted. A Free India will be better able to cope with such problems by enacting laws to check the export of her foodstuffs which go to feed other nations abroad at the cost of bringing starvation upon her own people and by making rapid strides towards industrial advance. Thirdly emigration on a large scale in countries which are not populated by anything like the number we have in India will prove effectively useful in keeping numbers within the means of subsistence. But the champions of the White African and the White Australian policy who glory in reaping the benefit from the penalty which is paid by India stand in the way. They fail to understand in their own small way that humanity is one and that there ought to be an equitable distribution of material well being among men of all races and creeds. This ought to be the aim of all human activity in the domain of economics. The business of the race is even more important than that of the government, for on that depends the ultimate salvation of humanity and the Government that does not care to alleviate the misery and obviate the poverty of the masses toiling under its rule has no claim to be called civilized. Considering India's position in the world politics the problem becomes a world problem—a world menace too. Unhappily the attention of our Indian leaders has been so much engrossed by political problems that they have relegated to social and economic matters almost a secondary position. Let the Indian leaders awake and bestir to solve this all important problem of population and subsistence in India upon which alone hangs the question of life and death to India.

WAR WITH NICARAGUA

By SCOTT NEARINO

SINCE the Hawaiian revolution of 1893 and the Panama revolution of 1903 the United States economic interests and its diplomats have been specializing in the art

of fomenting revolutions in weak countries where they desire to make political changes. One very significant illustration of this policy comes from Nicaragua.

United States bankers hold many Nicaraguan bonds. United States timber interests are equally interested in Nicaraguan mahogany. The U S Navy wanted a base on the Pacific coast of Nicaragua. The U S Government wanted a canal across Nicaragua. This combination of economic and strategic interests led to the establishment of a U S protectorate over this little country of slightly more than one half million inhabitants.

In 1909 Zelaya was president of Nicaragua. A revolution broke out against him in that year financed by Adolpho Diaz, who was employed by an American mining corporation at a salary of \$1000 per year. Diaz advanced \$600,000 in support of his revolutionary cause.

Zelaya was driven out of Nicaragua and a successor elected. Still the United States continued to support the revolutionists. The Nicaraguan Government protested officially to the United States, but Washington compelled Nicaragua to allow American ships carrying arms and munitions for the rebels to pass the blockade which the Nicaraguan Government had set up.

Nicaragua's troops, in August 1910 surrounded the rebels and attempted to destroy them in Bluefields. The U S fleet landed marines and checked the government campaign.

In October, 1910, the United States State Department sent an agent to Nicaragua who arranged for loan for American bankers to be secured through a customs lien. During the same month the leader of the revolution, aboard an American warship, agreed to negotiate the loan as soon as they came into power. With the assistance of the United States the revolutionists were successful. Estrada was elected president and Diaz vice-president. Within three weeks this government was recognized by the United States State department. The terms of agreement between the Estrada and U S officials were subsequently made public and turned the Nicaraguan masses against the conservative Estrada government.

During 1911 the National Assembly of Nicaragua adopted a constitution aimed to prevent foreign loans. This constitution was opposed by the U S State department. After its adoption President Estrada dissolved the Assembly, but the country was against him and he was compelled to resign, leaving Diaz as acting president.

The Diaz government was not more

popular than the Estrada had been. The United States minister wired to Washington: "The Assembly will confirm Diaz in the presidency according to any one of the plans which the State department may indicate. A war vessel is necessary for moral effect." On May 25, 1911, he wired that a war-vessel should be provided "at least until the loan has been put through."

Meanwhile representatives of the Diaz government in Washington signed a series of agreements under which certain New York bankers made a loan to Nicaragua and the State department appointing a customs collector who had the confidence of the New York bankers. These measures made Diaz so unpopular that in July, 1912, the country rose in revolt against him. The State department sent 412 U S marines and notified the U S Minister that the American bankers who have made investments in relation to railroads and steamships in Nicaragua have asked for protection. This "protection" included eight war vessels and 2725 sailors and marines. Managua was bombarded, and the U S forces took part in several land engagements against the revolutionists. The leader of the revolutionists finally surrendered and was exiled to Panama on board a U S warship.

The expenses of this revolution led Diaz to apply for another loan which was made in 1913, with railroad and bank property pledged as collateral. In 1913, also, a treaty was drawn up with Nicaragua providing for the construction of a canal, for the U S control of the Corn Islands and for a U S naval base on the Gulf of Fonseca.

After 1913 the conservatives remained in power for more than a decade. U S marines were kept in Nicaragua from 1912 until 1925. In 1924, a Liberal candidate was elected to office and the next year U S Marines withdrawn, the conservatives under Chamorro, defeated candidate in the presidential election, engineered a revolt which restored them to power. In May, 1926, the Liberals captured Bluefields and set up an opposition government. Immediately, U S marines were landed at the port of Bluefields, it was declared a "neutral zone," and ultimately this policy was followed by the U S officials to the point where each important center of liberal influence was "neutralized" under the control of American marines.

Nevertheless, in spite of all discouragements the Liberals continued to win—perhaps, as Diaz claims, because of the support which they were receiving from Mexico—perhaps, as the Liberals claim, because of the support which they received from the masses of Nicaraguan citizens. Be that as it may, the U.S. State department, in pursuit of American economic and diplomatic interests, recognized Diaz, provided marines for his protection, appointed a collector of customs for him, denounced his opponent as a Bolshevik, instructed the American mahogany companies to pay taxes to Diaz rather than to the Liberals and finally, on January 6 1926 ordered to Nicaraguan waters new naval units which provided the American admiral in charge with 15 war vessels and 2000 landing troops.

Replying to attacks from opposition Senators, the State department announced that this was not intervention but merely the protection of American interests. However, on January 10 in a special message to Congress, President Coolidge made very clear the policy that the United States

Government would follow. 'If the revolution continues American investments and business interests will be very seriously affected, if not destroyed. The currency, which is now at par, will be inflated, the proprietary rights of the United States in the Nicaraguan Canal route places us in a position of peculiar responsibility. I am sure it is not the desire of the United States to intervene in the internal affairs of Nicaragua. Nevertheless it must be said, we have a very definite and special interest in the maintenance of order and good Government in Nicaragua at the present time. It has always been and remains the policy of the United States in such circumstances to take the steps that may be necessary for the preservation and protection of the lives, the property and the interests of its citizens and of this Government itself.'

This is, in effect, a declaration of war on the Sacasa Liberals who will be fought by the military units of the United States just as the Liberal revolutionaries of 1912 were fought, until the Conservatives are again thoroughly established in power.

THE BAKULE-INSTITUTE AT PRAGUE

By PROFESSOR M. WINTERNITZ

DIRECTOR Bakule of Prague (Czechoslovakia) is the most remarkable educationist I have ever come across. He is indeed an educational genius. In 1897 he began his career as a village schoolmaster. As he had his own ideas about education he could not help coming into constant conflict with the school authorities. Like his great contemporary in India, Rabindranath Tagore, he claimed freedom for the child and was convinced that the children had to learn more from life itself and from the book of nature, than from school books. His leading idea was that children must learn by experience, not by being talked to. As he says:

Until Milca has hurt his nose by running down the hill you will never convince him that it is foolish to rush down a hill in a hurry. And Joseph will never believe Francis to be stronger than him, till as long as he had not been thoroughly thrashed by him.

Love and devotion on the one hand, and art on the other, are the chief instruments of education for Director Bakule. He is the greatest master in the art of *developing all the creative powers in the child*. He has made his boys drawers, painters, wood cutters, carpenters, builders, musicians, and writers and taught them these and other arts, of which he himself had only a faint idea—simply by finding out the faculties which are hidden in the individual child, and developing them to the highest possible degree. That is to say, he inspires his children with such enthusiasm and energy, and makes them enjoy their work so much, that they themselves develop every faculty that may be in them.

In 1913 a prominent professor of surgery at the Czech University of Prague conceived the idea of founding an institution for the

education of crippled children, and he appointed Bakule as teacher. This was Bakule's great opportunity. He searched and searched, and gradually found the ways to make these poorest of the poor, boys without arms, without feet, or with maimed limbs, happy and useful members of society. He began by showing them what life is, real life. Human life means social life, means co-operation, living and working together. Thus the first thing he did was, to form these poor little creatures into a *society*, a society of little ones, but a real society. And they soon found out by themselves that being a member of a society involves duties, to be fulfilled. They had to learn to work. And he taught them to work—those who had no hands, to work with their feet, and those who had neither, to work with their brains and with what remnants of limbs a cruel fate had left them. He did not care about their learning to write or to read (at which of course, the school authorities were greatly annoyed) but he waited until life itself would make them wish to learn these things. And the boys did learn writing as soon as they began to feel a desire to write to their mothers, or sisters, and soon enough they learned reading when once a desire arose in them of making themselves acquainted with the contents of books.

Bakule's experiences during and immediately after the war read like the most thrilling novel. One of the first results of the war was an ever increasing number of invalids. There was new work for Bakule in a school for war cripples. He worked hard, but as he always cared more for the poor children than for the bureaucracy and its rules, difficulties arose. And after six years of most useful work he had to leave his place of activity. Now a strange thing happened. The little band of crippled pupils declared their solidarity with their master. They decided not to leave him but to go with him and help him to build a new institution in which he could carry on his educational work, free from all shackles of bureaucratic narrow mindedness. There were eleven boys and one girl who without a penny in their pockets and without any resources other than their courage and energy were resolved to follow their master and earn their livelihood by their own efforts in order to prove that their teacher's method was good. For some time they declined to accept any financial help offered to them

even by the President of the Republic and by a rich countryman of theirs living in America. They wanted to prove to the public that their teacher, the "rebel", as he was called, was right, that they the poor cripples, had learned to work and were able to keep themselves by their own labour. This proof was given under the most difficult circumstances. It is true, they had no home and wandered about like vagabonds from village to village, but in the evening, Bakule himself gave lectures and the boys earned what they needed by wood cutting, painting and other work of their hands or feet as far as they had any.

At last help came from an unexpected quarter. Children of the American Red Cross had collected a sum of money for a children's camp in the Tatras mountains in Slovakia. There the Bakule children were invited in the summer of 1919. Miss Harrison, the leader of the camp, was struck with the achievements of these crippled children and promised to tell the American children about them and to send them help—help not for themselves but for *social work among the children of the poor*. For this was the idea and the aim of the 'Bakule Community,' as it was called, to found an institution in which poor children from the streets should have a home and be educated according to the principles of freedom and good will in the spirit of master Bakule.

A hard winter came after the beautiful summer in the Tatras. The little band had to work hard enough to make both ends meet, they suffered from hunger and cold, and had no home. Yet they never lost their good humour, their courage and their self-confidence. But Miss Harrison was true to her promise. A gift of 2000 dollars came from The American Red Cross children, and soon also a price of 25,000 dollars. Now after they had actually *proved* that they had been able to keep themselves, they no longer refused to accept gifts, the less so as they wanted to use these gifts not for themselves but for work of social service for the "*Bakule-Institute*" that was to be founded.

This Bakule Institute is now one of the most remarkable educational institutions in Prague and, indeed, in the world. In one of the suburbs of Prague there stands a house, not very large, with a garden. Here Director Bakule lives and works with his children like a happy family. Any boys and girls from the streets come, as they like

and join the little band of workers, to work and to learn with them. Now there are not only crippled children, but also healthy boys and girls, and they come of their own sweet will, to learn to work and to find pleasure in work. But no, it is not only work that awaits them in Bakule's home. After the day's work the boys and girls gather in the kitchen, which has to serve as a hall and learn to sing. And this is one of the greatest marvels of Bakule's educational art. Here are boys and girls from the street, street-urchins, proletarian children, no selection of good voices or of specially gifted young folk, and here is Bakule himself who tells us that he knows no more of music than any village school master would, and yet he has formed and trained a band of singers, a chorus, whose songs not only have won the hearts of the people in many countries, but are also admired by some of the first musical authorities for their wonderful harmonical and rhythmical exactness and their expression of feeling. Even without knowing the Czech language, one is moved to tears, whenever one hears the "Bakule-Chorus" sing such folk songs as that of the orphan child on the grave of its mother. The "Bakule concerts" are now well-known and highly appreciated not only in Czechoslovakia, but also in America, where Bakule with his children had been invited in 1923 and had a most enthusiastic reception. In 1923 he and his chorus attended the third International Conference of the New Education Fellowship at Heidelberg (Germany), where both Bakule's lecture on his work and the songs of the "Bakule-Chorus" aroused the greatest enthusiasm. When Director Bakule returned from Heidelberg, I asked him to repeat his lecture in our German Ethical Society at Prague. He kindly did so. His lecture had been translated from his mother tongue Czech into German, and he himself read it, without knowing the German language, as well as he could. Yet it was astonishing what a deep impression this lecture, in which he told us

of his educational work and ideas, made upon all his hearers. Nobody thought of the language, but everybody listened only to what he said without caring how he said it.

When Rabindranath Tagore came to Prague in October last year (1926) I suggested to him, on the very first day of our happy punardarsana, a visit to the "Bakule-Institute", as I knew it would interest him more than anything else in this town. For there is a wonderful agreement between the educational ideals of the Poet and those of Bakule. There was only one afternoon on which this visit could take place, as Director Bakule had to leave Prague for a visit to Denmark the day after. The Poet was greatly impressed with what he saw at the Bakule Institute, and both the director and his children were extremely happy and proud of having the great Indian Poet in their midst. And they were immensely delighted, when the Poet said a few kind words, which were translated to the children, inviting them to come to Santiniketan. Director Bakule said that it was not at all impossible that they would some day avail themselves of this kind invitation. For the "Bakule Chorus" actually plans a journey round the world. Last year they gave numerous concerts in Copenhagen and in the whole of Denmark. This year they will come to Switzerland to be present at the fourth Conference of the New Education Fellowship at Locarno. All this travelling about to different countries of the world has a definite and noble purpose. By their songs these little children of Czechoslovakia wish to win the hearts, and have already won the hearts, of the children and of the people of foreign countries. They wish to demonstrate that we are all brothers and sisters, whatever our country, nationality, language, or religion may be. Thus Director Bakule is not only a pioneer of a great educational movement, but also a worker for peace and good-will among the nations of the world.

THE SILVER JUBILEE OF THE MAHARAJAH OF MYSORE

By PROFESSOR P SESHADRI M A

Today is the Silver Jubilee of His Highness The Maharajah Sr Krishnaraja Wadiyar Bahadur G C S I of Mysore an event which is being celebrated with great enthusiasm not merely by his subjects, but also by his numerous admirers outside the state. His Excellency the Viceroy paid a well deserved tribute to the peaceful and progressive administration of His Highness on the occasion of his recent visit to the state and testified to its appreciation by the British Government by the graceful announcement of the perpetual remission of the large sum of ten and a half lakhs of rupees from the annual subsidy of the state.

It is pleasant to see an Indian state keeping itself abreast of the developments of modern government and achieving results worthy in many respects of comparison with British India.

Born on the 4th June 1884 His Highness had the misfortune to lose his father Maharajah Sir Chamarajendra Wadiyar Bahadur as a mere boy of ten when the state came under a Council of Regency with Her Highness the Dowager Maharani at its head an arrangement which continued for a period of seven years from February 1895 to August 1902. His Highness was invested with full powers by His Excellency Lord Curzon in August 1902 and it will be conceded by all that His Highness has amply fulfilled the high expectations entertained of him and has given an account of himself as an administrator of which any ruler in India to day may be proud.

It is true that His Highness started with many advantages with some of the best traditions of good administration which any state may possess. For the long period of fifty years, from 1831 to 1881 the state was administered by the British Commission which has left numerous memorials of good government all over the state to-day. It must however be recognised at the same time that the good traditions have been maintained unimpaired and even improved upon in many respects by Sr Krishnaraja Wadiyar. With an enlightened

appreciation of the responsibilities of a ruler intense devotion to work and a respect for

Maharaja Sr Krishnaraja Wadiyar
Bahadur G C S I of Mysore

constitutional forms of government rather unusual with Indian states he has guided

the administration with great ability and success. His work as ruler has always been the primary concern of His Highness and he has never swerved from the path in pursuit of pleasure a compliment which cannot be paid to many Indian rulers to day. To those familiar with the conditions of the administration of the average Indian state it is a relief to enter into Mysore and realise the enormous extent to which it represents an improvement on the type.

Among the numerous features of good administration in the state during the last twenty five years special reference must be made to the steady development of its industrial resources and the provision of great engineering facilities for progress. The Sirasamudram Electric Works represent one of the large Engineering concerns in Asia for the harnessing of a waterfall to produce power. The Kannambady Reservoir—called appropriately the Krishnaraja Sagara after His Highness—is again another gigantic scheme of water storage of great economic value to the state. The Bhadravati Iron Works are only second in magnitude to the Tata Works at Jamshedpur and promise to serve the state in an effective manner in the coming years. By means of special Economic Conferences and surveys and directions by the authorities several new industries have sprung up and progressed in the state. The silk and sandal wood industries of the state have already acquired a reputation for themselves and have helped the economic progress of the state.

The admirable progress of the state is not less evident in other departments. Special attention has been paid to Education and beside a University of its own it can now boast of a well ordered and ever

progressive system of educational development. Its judicial administration has maintained the highest ideals of integrity and not a whisper has been heard against its civil or criminal courts of justice. The people have shared gradually in the work of government by the introduction of representative institutions corresponding to those in British India. Besides the popular institutions in charge of local government, it has a large representative assembly where the people come forward with their grievances before the state and a legislative council whose share in the government is growing more and more real. Above all the state has built up a regular civil service independent of the personal caprices of the ruler (as is unfortunately not the case in many Indian states) guided by ministers enjoying considerable freedom. It is no wonder in these circumstances that Mysore has enjoyed the services of some of the ablest Indian officers of these decades. Sir K. Seshadri, Sir M. Vishweshwaraya and Sir Albion Bannerjee to mention some of the most prominent of them.

While felicitating His Highness on the occasion of his Silver Jubilee one cannot help drawing attention to his excellent example for the emulation of his contemporaries in the Indian states. If every one of them rendered as good an account of himself as a ruler as His Highness, Sir Krishnaraja Wodeyar of Mysore, they would not only be conferring lasting benefits on their subjects but also solving automatically the problem of the states which is agitating the mind of all interested in the future well being and progress of India.

8th August 1927

BEGINNINGS OF OLD HINDI

By K. P. JAYASWAL

RAI Hira Lal Baidar the premier scholar of the Central Provinces who has had to his credit elucidation of the history, geography and ethnology of his Province has thrown light on a new field of research. By his *Catalogue of Sanskrit and Prakrit Manuscripts in the Central Provinces*

(Government Press Nagpur 1926) wherein 8185 hand written books have been noticed the learned scholar has given us authentic information from Jain manuscripts which may be described as the real history of old Hindi now available for the first time.

Mr Hira Lal has dealt with the Prakrit-

MISS in notices Nos. 6922 to 8155 pp 620 to 710, with extract covering pp 717 to 768. The oldest MS. is dated Vikrama Samvat 1415, the exact date corresponding to the 6th June, 1359 A C. The actual dates of authors cover centuries from the 1st to the 17th of the Christian era.

In the Prakrit Volumes composed in the tenth century A C we see Hindi emerging in its earliest form. New verses unknown to Prakrit literature but known to Hindi and to Hindi exclusively are employed and verses are rhymed—a feature again unknown to Prakrit. A feature more important than these is the adoption of grammatical forms which is a clean breaking away from Prakrit. The vocabularies are still mainly Prakrit or Prakritic with an introduction of new *deś* words but the grammar is essentially the grammar of Hindi or old Hindi. This I shall illustrate below.

Darsana Srivastava (Nos 6990-7013, 7247 & 7371-73, 7478-7935) who has composed all his works except one in Prakrit lived about Vikrama Samvat 990-993 A C according to the date given in his *Darsana-sara*. Mr Hira Lal with his usual accuracy familiar to Indian epigraphists discusses the date of the author in the *Introduction* to the *Catalogue* at pp XVII-XVIII. His *Sraṇakachara* (notice No 7935) of which the manuscript is the library of the Sena-gana Iaina Temple at Karanja in the District of Akola. Berar is a work in 200 *doha* couplets. He was the first Jain author to produce a religious work in *dohas*. Mr Hira Lal has quoted from another work of the same author two stanzas which say that this other work (*Narayachara*), was first composed by Deva Sena in *dohas* but when he read it to Subhankara the critic laughed and said that the *dohas* did not suit the subject matter and advised *gāhābandhana* *tan* *blan* *ha* say it, (which is to say) through *gāthā* (the well-known Prakrit) metre. Mailla Diavala the pupil turned that book into *gāthā* stanzas. But Deva Sena who evidently wrote for the Jain public at a time when Prakrit had become a dead language preferred the *dohas* and stuck to them in his *Sraṇakachara*. This reminds us of the objection raised in the time of the Buddha to his preachings being in the vernacular of the time and the suggestion that they should be put in the language of the *chhandas* that is Vedic or Upanishadic Sanskrit. The proposal was of course rejected by the great teacher as it would have defeated the very

object of the Master who wanted to speak to the populace. The objection is such as would be raised again and again with the march of language. It was raised in our time when Pandit Sridhara Pathak and Babu Marthili Saran Gupta started writing Hindi poetry in spoken Hindi instead of the archaic Vraja Bhasha. The men who care that their composition should reach and become popular, with the populace and be not confined to the learned few, will give up the shackles of classics cast off the artificiality of learnedness, and appear in homely intimate language of the public. Deva Sena did it.

Mr Hira Lal has put us under obligation by giving extracts from the *Sraṇakachara* (pp 701-2). I give here a few lines from them.

दुख दुखित होत कति
दुख ददाति उदर ॥
अनिन्द-उरिनु बाहर जमद
जिय मगत कहिय ॥

Here the only Prakrit *śloka* is in the last word which is metric cause.

स जमकीष उदरगत
जमु दुखि दुख पाद ॥
दादुख उदरपाय पद
उदर उदर पाद ॥
मागद गद-उदरपाय
गद-गिर पद विजति ॥
ज विज-उदरपाय पादियत
पा मर कहियत पाद ॥
दुख दादुख गद-गिर
दुख गद उदरपाय ॥

The next specimen of the proto type of old Hindi we get from the famous Pushtadanta the voluminous Digambara author. His date is fixed by the Rai Bahadur with reference to inscriptions and historical events to be about Vikrama Samvat 1025-1035 A C. In about 30 years we find the vernacular conquering. His epic works on subjects which every Jain must know and hear recitations on—his *Adi Purana* and *Uttara-Purana* his *Charitas* or biographies are all written in vernacular. Pushtadanta employs *Chau-pai* so well known to us from Jayasi and Tulsi Dasa. Samples of his language are

स भयद काहिय विधि गोपन ॥
दुख भयद कहिय उदर ॥
उदर भयत उदरपाय दुख पद
उदर कहियत उदरपाय ॥

SRICHANDA who flourished about 936 A C adopts vernacular not only in various vernacular metres (some of which have now become extinct) but also in Sanskrit metres like Vamsastha

तदा सुवि कायकसेल सोद्वि ।

मरोर क्त तवसोर वाद्वि ॥

प्रविड पूया कुमुदोद सोद्वि ।

गुणोद स भूय फलोद राद्वि ॥

An example of an extinct metre is

सुदुहाद वाद्वि ॥ चारदवाद्वि ॥

कारण, लद्वि ॥ म च हो कद्वि ॥

[दुहदाय नाम क्त]

Duhadaum metre

The Vamsastha verses of this author remind us of the present day leading poet of Nepal who has given a modern literature to his country using Sanskrit metres

DHANAPALA lived in the eleventh century Mr Hiralal points out that Dr Jacob has edited his *Bharishya datta Charita* recently Unfortunately this is not yet available to me Dhanaapala uses the Hindi metre *soratha* and begins his work with a *soratha*. From his *Srutapanchami latha* extracts have been given pp 70-2 6) We find him using Chaupai as his main metre

अद्विषय जय, सोद्वि च होद्वि ।

अथ स भय विज, उषद्वि च होद्वि ॥

YOGACHANDRA MUVI (12th century) has *doha* as the prevailing metre in his *Yoga saita*, and occasionally *sorathas* and *Chan pails*

जीवा जीवद्वि म उ

जी जावद्वि त जाविषद्वि

मोक्षद्वि करण य उ

मयद्वि जाद्वि जीवद्वि भावि उ

काद्वि सयद्वि कर उ जी म य उ ।

इति अद्विषय करिषि का म य उ ॥

We are thankful to Mr Hira Lal for putting before us the connecting link between the Chand Bardai Jayasi epoch, and Raja Sekhara We also congratulate the C P Government on this production which tells us that even their territory which was believed to be devoid of literary treasures has so much new knowledge in store for us.

I would here sound one note of disagreement with the learned historian He says that *doha* may be regarded as 'to have come into use about 9, 7 A D.' (p xviii) I respectfully differ *Doha* must have been well established

before 933 A C Then Devaseena thought it advisable to adopt it But evidently its field had been secular, or at any rate not Jain. It was introduced for the first time in Jain religious literature by Devaseena (933 A C), but it must have already existed for some centuries and would have been widely popular

The question arises when did this language which had cast off inflexion and declension come into existence? The Prakrit grammarians ignore this new variety of language They take notice up to *Apabhramsa*—a technical term employed by them to denote an intermediary or transitional Prakrit But the examples given by Rai Bahadur Hira Lal do not answer the *Apabhramsa* characteristics so much as they display old Hindi features. We know from the later language, that is Old Hindi, that the language brought to light is clearly to be identified as the mother of Old Hindi What then is the term for it? The answer is given by Narada the law-giver

वारद वाद्वि ।

म क्तुते, प्राकृतवाक्ये; प्रियामनु क्तवः

इत्यभाषाद्, प्रायेण बोधयेत्स गुरुः, क्तुते,

Narada cited in the *Viramitrodaya* p 72 (Calcutta, 1875), see also Jolly, *Saored Books of the East* Narada and Brihaspati' p 266

The Preceptor (or Teacher) was to give instruction to his pupils through Sanskrit, Prakrit, and *Desa bhasha* The last one means 'the spoken language of the country' There was thus *desa bhasha* distinct from Prakrit. *Apabhramsa* was included in Prakrit *Desa bhasha* was something besides Prakrit cum *Apabhramsa* and not identical with them *Desa bhasha* was thus the term for vernacular It is probably this language which is implied by Prakrit Grammarians in their term *desa* for certain class of words which are not Sanskrit and Prakrit. Our examples having metres which are not Sanskrit or Prakrit and having a grammar quite distinct from them is the *desa bhasha* of Narada. It is a justifiable inference from the verso of Narada that when that direction was laid Prakrit had ceased to be a spoken language The vernaculars would thus have arisen in or about the Gupta period

The known faithfulness of the religious scribes of the Jains ensures the preservation of the original texts. *Prima facie* the texts as we find them have to be taken to represent the ascertained periods of their authors.

CANADA CELEBRATES DIAMOND JUBILEE

By SUDHINDRA BOSE, Ph.D

Lecturer in Political Science State University of Iowa

CANADA celebrated sixty years of its national existence on the first three days of July. Just as the people of the United States celebrated this week the 151st anniversary of the Declaration of Independence, so the Canadians held the diamond jubilee of the confederation of united provinces. The Canadian celebration was on a scale never before attempted in that country.

The two notable achievements in the brief Canadian life have been the winning of responsible government and the establishment of a federal system side by side with this political development has been a steady growth of agriculture, manufacturing, commerce, mining and lumbering. Technically it may yet lack some parts of an independent national outfit but Canada to all intents and purposes is a free country under its own steam rather than an English colony under the hoof of the London government. Canada from 1867 to 1927 has made a record of marvellous progress.

Canada did not always have a national consciousness. It is a modern phenomenon. The Canadian population is a mongrel breed of many races in which the English and the French predominate. Although the idea of a Canadian nation had spread amongst the peoples of Canada even before 1867 when the confederation took place, some of the leading provincial politicians were unrelenting antagonists of a federation.

The opposition to the union was specially strong in the maritime provinces. The anti confederation sentiment is well indicated by the expressed opinions of the majority of the newspapers in that section of the country. Perhaps the following from the *Halifax Citizen* of June 21st, 1867, will give some idea of the strength of this sentiment.

"The Canadian government has already before the Confederation Act comes into force assumed the government of Nova Scotia and New Brunswick and has issued an order-in-council appointing the first day of July a national holiday throughout the Dominion and also ordering the volunteer

forces of the four provinces to turn out in their respective districts and celebrate the day by a review firing of salutes and other moles of rejoicing. The order also provides that all volunteers who turn out shall receive one days pay.

We doubt if even this magnificent reward thus generously offered will induce all volunteers in Nova Scotia to observe the day in the manner prescribed or prevent those who do obey the command of their officers from feeling a hrob of shame as they hear a *jeu de joie* over the grave of their country's freedom.

One of the religious weeklies suggests that divine service should be held in all the churches and that the day should be observed as one of thanksgiving. By all means open the churches not however for thanksgiving and rejoicing but for the more appropriate services of humiliation and prayer let every flag in the country float at half mast, and let the day be observed as an occasion of lamentation and mourning over the lost liberties of unhappy Nova Scotia.

These extracts show how bitterly the opposition viewed the outcome. There was much weeping and gnashing of teeth. There were among the irreconcilables days of fasting and lamentation.

It was such a hot fight the anti confederate group waged that it is now difficult to visualize it. Among the confederation's bitterest enemy none was more vehement than Mr Joseph Howe a native of Nova Scotia and reputed to be Canada's foremost orator of the time. Voicing his preference to be known as a British subject rather than a Canadian citizen, the loyalist Joe Howe burst forth

"We belong to a great Confederacy now—the British Empire. I am a British subject, and for me that term includes free trade and common interest with fifty provinces two hundred and fifty millions of people forming an empire too grand and too extensive for ordinary magnates."

Canada, we are told has invented a new flag isely, I suppose with the meritable beaver upon it gnawing himself of a maple tree. Verily we should be inferior animals, and our fur not worth much if we were to gnaw ourselves off the great tree whose tap roots are in the British Islands—whose limbs stretch far and wide over the universe—beneath whose majestic shades are at once dignity and repose. Born for the universe as every British subject is, I cannot narrow my mind to accept the great privileges prepared for us.

Nobody can accuse me of blasphemy for certainly the constitution we are asked to accept is unlike anything in heaven or earth or under the earth. The Confederacy is neither an empire, a monarchy nor a republic. It is to be a nation without an army or navy—without a king or President or foreign office—with no capital but debts clubbed together and a frontier of four thousand miles.

That was what Joo Howe said in Canada some six years ago. An Indian in reading Joo's logobrius oration might think that it was delivered by some "nper loyalist" of India of today. The minds of the ultra loyalists both in India and in Canada strangely enough run on the same track.

The majority of the Canadian people however soon perceived that those who are opposed to the union were moved by petty jealousies and rivalries and were seeking their own local selfish aims. To the altar of the united nation must be sacrificed the local and provincial interests. The fathers of confederation sought therefore to establish national institutions capable of handling national affairs common to all the colonies.

"Many of them believed that federation would be the main factor in building up a Canadian national sentiment," writes H. Duncan Hall in his book *The British Commonwealth of Nations*, "a consciousness of unity springing from the fact of high purposes pursued in common and a wider loyalty binding together each to each. Nova Scotian, French Canadian and United Empire Loyalist. They saw too that only by creating a Canadian state exercising all the powers of a state could the inhabitants of the Colonies in Canada be given a sufficiently wide field of action and of responsibility to enable them to raise themselves above dependence and to the level of human dignity reached by say the citizens of the United States or of the United Kingdom. Nationalism thus meant the end of colonialism. But it did not necessarily mean the formal severance of the connection with the Mother Country. That connection as all parties agreed should be strengthened rather than weakened but the more far-sighted leaders realized that it could not safely be strengthened unless it were rebuilt upon a new basis—that of free co-operation between virtually independent states.

Finally delegates from various provinces met at Quebec in 1864 and adopted 72 resolutions presenting a plan for federation. Then in 1867 the British Imperial Parliament

passed the British North American Act, providing federation of all British North American provinces ratifying it made Canada the first of the British possessions to attain autonomy. The Act created central government of a royally appointed Governor General and a Senate of 78 appointed life members and a House of Commons of elected members *apportioned to population* and a Cabinet responsible to the House of Commons. Each province was to have a Lieutenant Governor, a legislature and a responsible ministry.

Specified local powers were assigned to provincial governments while the general and residuary powers were entrusted to Dominion Parliament at Ottawa. In short, Canada became a full self-governing entity within the British empire.

One of the strangest members of the British empire in the New World is Newfoundland. It is an island separated from Canada by a narrow strait. This island is smaller than England but larger than Ireland. Newfoundland the oldest settled territory on the Canadian side is independent of the Dominion. Newfoundland has a government and a written constitution of its own.

At the time of the confederation Newfoundland held aloof. Since then there has been considerable discussion of uniting with Canada but the union has never taken place.

Professor Robinson in his *Development of the British Empire* tells us that in 1894 when Newfoundland was confronted with a crushing financial disaster it sought to join the Dominion. Canada however was unwilling to assume Newfoundland's debt of forty-eight million rupees. It is probable that Newfoundland whose chief feature of life is the industry of fishing would continue to live alone—outside the Dominion. With the exception of Newfoundland the Dominion of Canada is inclusive of all the varied life of the nation from one sea coast to another.

Unlike India Canada is not a subordinate member of his majesty's government. There is still the British appointed governor general but he is no longer the representative of the British cabinet. He is more of a social ornament than a political power. If he should forget this at any time God help him! Since the new imperial shake up it has been decided that henceforth communications are not to be through the Governor General but directly from Cabinet to Cabinet. A self-governing member of the empire, Canada is master of its own destiny. It is subject to

great severity—and even with ruthlessness hundreds and hundreds of hated Loyalists and Tories across the border to Halifax. The city of Halifax came to be known as the infamous head quarters of traitors and oemies of liberty. Today the past seems to have been wiped out, and a complete understanding exists between Americans and Canadians.

Everything points to a coming time of trial for the nation and the empire remarked Dean Inge of London the other day in one of his jeremiads. Like every Tory Englishman of his class, the gloomy Dean believes that the large populations of the British empire should remain in subjection forever. There is but the duty to bow down in humility and contribute

financial and—in war times—military support. The Reverend Doctor William Ralph Inge is a specialist in imperialism, celestial and temporal. Independence is barbarism. If it is then some three million Americans turned crude barbarians 151 years ago and their descendants are now enjoying the splendid savage state. The fact is that it is as hard for a Tory to judge Americans justly as it is to get out of his hide. Happily Canadians and most sensible Englishmen understand the American state of mind which prefers an American state of mind which prefers an English nation.

PROBLEMS OF INDIAN STATES AND THEIR POSITION IN FEDERATED INDIA

By CRIMANLAL M DOCTOR M. A. LL. B.

"AUTOCRATIC rule will in future be an exception and an anomaly and in the vast majority of the countries of the world the realisation of the danger that attends autocratic rule without proper regard to the interests of the people has led to the substitution of Government by the people for the uncontrolled authority of an individual sovereign (Lord Chelmsford at Bharatpur 1919).

The time for appointing the statutory commission on the Montford Reforms is drawing near and the Chamber of Princes has already appointed a Committee to report on the future of the Indian States and their relations to the future Government of India as constituted by a further instalment of Reforms. The Committee is expected to report on the ways and means for the maintenance of the present dignities, privileges and rights of Indian Princes. The Princes have become very jealous of their rights and are trying to advance their claims to particular territories or suzerainty over particular smaller States under the old treaties. The Nizam asked for the Rendition of the Berars and the Gaekwar claimed his paramountcy over his tributaries in Kathiawar but the late Viceroy Lord Reading gave a stunning blow to the growing ambitions of such Princes by

his memorable reply to the Nizam on the 27th March 1906 finally rejecting his claim to the Berars with the concurrence of His Majesty's Government. In the course of that reply he said —

"The sovereignty of the British Crown is supreme in India, and therefore no ruler of an Indian State can justifiably claim to negotiate with the British Government on an equal footing. Its supremacy is not based only upon treaties and engagements but exists independently of them and quite apart from its prerogative in matters relating to foreign powers and policies. It is the right and duty of the British Government, while scrupulously respecting all treaties and engagements with Indian States to preserve peace and good order throughout India.

The right of the British Government to intervene in the internal affairs of Indian States is another instance of the consequences necessarily involved in the supremacy of the British Crown. The British Government had indeed shown again and again that they have no desire to exercise this right without grave reason but the internal no less than external security which the ruling Princes enjoy is due ultimately to the protecting power of the British Government and where imperial interests are concerned or the general welfare of the people of a State is seriously and grievously affected by the action of its Government, it is with the Paramount Power that the ultimate responsibility of taking remedial action if necessary

must lie" *** The varying degrees of sovereignty which the Rulers enjoy are all subject to due exercise by the Paramount Power of this responsibility"

Lord Reading has thus proclaimed a new orientation of policy towards the Indian States in an authoritative manner, and it is our duty to examine its implications. The British Government has, by its concurrence in the principles enunciated by the late Viceroy, converted its former Allies and Friends into vassals, emphasised the Paramountcy of the British Crown over them, and reaffirmed its right of intervention in the internal affairs of Indian States, if the imperial interests or the general welfare of State subjects require it. The Government has declared in unequivocal terms its duty to preserve peace and good order throughout India, and to take remedial action in the interests of State subjects if their general welfare is seriously or grievously affected by the action of a State Government.

The reply also reminds the Princes that the internal security that they enjoy is due ultimately to the protecting arm of Britain and that without that support they may find their position quite insecure owing to the revolt of their subjects. Lord Reading assures the State subjects that as they have lost the right of revolt, the Paramount Power is bound to protect them against the tyranny and misrule of their Princes.

The Montford report contemplates a revision of treaties with the Indian States, and the time is ripe for such revision in view of the pronouncement of Lord Reading.

The future of Indian States involves the future of their subjects. State subjects are showing signs of dissatisfaction against their present condition and a number of State subjects conferences are being held, pre-eminent among them being the All India Indian State subjects conference, the Deccan States subjects conference, the Kathiawar Political Conference, the Baroda State Praja Mandal, Cutchhi Prajakiya Parishad and some others. The demand for responsible Self-Government in Indian States is growing apace, and it is being supported by a section of the Indian Press like the "Kesari" and "Maharatta" of Poona, the "Dnyan Prakash" and "Servant of India" the "The Tarun Rajasthan", "The Nava Gnjarat", "The Saurashtra" and the great Dailies of Bombay like the "Bombay Chronicle", the "Hindustan", the "Bombay Samachar", the "Sanj Vartman"

and some others. Mr G R Abhyankar the President of the last sessions of the Deccan States Conference held on the 22nd May, 1926 in Poona is a great student of problems of Indian States, and relying on the latest pronouncement of Lord Reading and the previous history of the development of the Paramountcy of the British Power over its former allies, he emphatically asked the British Government to *advise, encourage and even dictate* the introduction of representative institutions and development on democratic lines leading to the realisation of full responsible Self Government in Indian States.

As the Royal Proclamation of 1917 has declared full responsible Self-Government for India as the goal of British policy it involves the federation of Indian States with the different Self Governing provinces of British India.

The Montford Report expected enlightened Indian Princes to follow in the wake of British India and introduce parallel constitutional reforms, but that expectation has not been fulfilled and as there cannot be a real federation between potential democracies with actual autocracies without jeopardising the very existence of the Commonwealth of India, the time has come for the British Government to intervene and make the Princes introduce constitutional reforms parallel to those in British India in their States and put constitutional checks on their autocracy. Mr Abhyankar, therefore, pleaded for a Royal proclamation expressing the will of the British Government to extend the Royal pronouncement of 1917 to Indian States. The King Emperor may call upon the Indian Princes to carry out the Royal behest, and the Princes will have no alternative but to obey the Royal will backed by the full prestige of the British nation.

In his speech at Bharatpur Lord Chetmsford reminded the Princes that the days of autocracy were gone and that the time had come for substituting Government by the people for the uncontrolled authority of an individual sovereign. But our Princes, just like the Bonobons, learn nothing and sit on a fence depending upon antediluvian methods of administration.

Lord Curzon once remarked that *Indian Princes should remember that they exist for the people, and that the subjects do not exist for them*. He, therefore, required the Princes to take the permission of the Governor-General and Viceroy for their foreign travels.

and absentee rule. Some frequent sojourners to Europe like H. H. the Gaekwar felt the humiliation but judging at this distance I think the rule was salutary and the present practical abrogation of that rule has only led numerous Princes to make annual pilgrimages to European watering places, pleasure resorts and sporting centres under one excuse or other resulting in many scandals like that of Mr. A. in the Mrs. Robinson case.

The situation has become so unbearable the grievances of States subjects are so great, the extravagance of most of our Princes has become so scandalous that the conversion of our States into constitutional monarchies or their absorption into British India are the only alternatives left to us.

Mr. Abhyankar wants a Royal Commission and the Conference supported him in that demand in order to go exhaustively into the question of treaty rights, status of Princes, their obligations and duties as constitutional monarchs, the method of introducing responsible Government to Indian States, the machinery by which matters of common interests can be adjusted and the part which Indian Princes and States subjects have to play in reaching the goal of Federated India. The Rt. Hon. Mr. V. S. Shrivastava Shastri emphatically supports the demand and says that personal rule must go however benevolent it may be in particular cases. The demand for a Royal Commission is quite opportune and if the Governor General accepts it, the work of the Statutory Commission will become somewhat easy.

The doctrine of self-determination was one of the fourteen points of the late President Wilson and it was partially applied to the territories and peoples of the vanquished countries in Europe and Asia. Here also it may not be in the interests of Britain to make an unlimited application of the principle and allow India the choice of complete independence or Dominion Status as against the present bureaucratic autocracy. But the principle may well be allowed to have operation in determining the future of Indian States. A plebiscite may be taken in each individual State by secret ballot under guarantee of British protection against harassment by the Princes or their administrations to the States subjects under direct British supervision and control requiring all adult males and females to vote whether they prefer to continue as States subjects or want to be British Indian subjects and

desire absorption of their States in British India.

If the Royal Commission goes through the grievances of the subjects of each individual State and gets a plebiscite I am sure the vast majority of the Ryots of Indian States would vote for absorption in British India, and the British Crown will be bound to respect the wishes of the majority and annex most of these States as rotten States, pension off the Royal families and extend the comparative blessings of bureaucratic autocracy with a veneer of democratic institutions of British India.

Even the elementary rights of man viz., liberty of speech, Press or Association, security of life and property and the right of *habeas corpus* are almost nonexistent in most of these states. Religious toleration and the protection of the honour of women are not to be found in some of these states and rapes and abductions to broad daylight by the Princes or their underlings are frequently reported.

It is no fault of the states subjects if their minds are alienated from indigenous rulers and turned towards the Paramount Power for protection and benevolent intervention. The incidence of taxation in most of these States per head of population is very much higher than in British India, while the sources of income are lesser owing to want of development of industries, commerce and agriculture. The states subjects carry the lot of their British Indian brethren just as they in their turn are dissatisfied with their present condition and want Dominion Status and full responsible Self Government under the British Crown.

As Mahatma Gandhi once said states subjects are slaves of slaves and as such their lot is only to be pitied and they cannot be asked to plunge into the vortex of non-cooperation. The lot of direct slaves is much better than that of slaves of slaves and hence any measures that tend to remove the middle slaves and convert the states subjects into British Indian subjects are welcome. I therefore urge upon the British Government the need of Royal Commission and the application of the doctrine of self-determination in a limited sense to Indian states and their subjects.

The Commission ought to have representatives of states subjects, Princes, British Indians and the British Government with power to co-opt local members while

bearing the grievances of particular states and their subjects. As Sir Robert Holland said in London recently before the East India Association the British Government cannot tolerate for a moment any tyranny in an Indian state under its protection, and the people want a sincere attempt to apply the principle. The ways of the foreign and Political Department of the Government of India are indeed inscrutable, but in view of the recent pronouncement of Lord Reading, it must encourage the people to come forward with their grievances and the political officers should try to remedy them and help the Royal Commission in their work with their official confidential reports against particular Princes.

The late Maharaja of Gwalior has laid down the golden rule of two percent of the gross revenues of the state for the Privy Purse, to be followed by all our Indian Princes. The Dewan of Baroda compared the Khargi grant of the Gaekwar with that of the Nizam, Holkar etc., and showed that the Gaekwar's grant was much less than that of these states and stood at between nine and ten percent of the Revenues. When even an enlightened Prince like the Gaekwar wants rupees twenty lacs for himself, two hundred seventeen thousand for the Hereditary apparent and some more lacs for providing other members of the Royal Family as announced by the Dewan in his budget speech, what must be the state of affairs in other states can better be imagined than described. The economic strain on the resources of the States is terrible and in view of the fact that there are nearly 700 states, big and small with a population of nearly seven crores, the problem becomes very important. The gross revenues of these states must be nearly seventy crores taking Rs. 10 as the *moderate* of taxation per head of population at a moderate computation. Taking the Gaekwar as an example of an enlightened Prince with a percentage of ten percent for himself and some more for the Hereditary apparent and the Royal Family at one end and some of the Rajput Princes spending more than half their revenues on their personal expenses, at the other end, we may strike the golden mean and be quite certain that our Princes are spending from twenty to twenty-five percent of the State Revenues on themselves and their Royal Families on the average. This means that an amount ranging from 14 crores to 17½ crores of

rupees is spent to maintain these Princes. Much of this amount is spent in dissipation, wine and women, intrigue and moral degradation, long sojourns in Europe, and purchase of foreign furniture, and foreign materials for their palaces. The atmosphere of most of these Darbars is full of petty intrigues, chicanery and low morals, in which the resources of the State drawn from the lifeblood of the subjects are frittered away. If these states were annexed the expense of maintaining the Princes and the Royal Families will be saved and the administration can be run at a very low cost. As an "Ex minister" says in the "Hindustan Review" of April 1926, the cost of maintaining the head of an Indian Province is not more than one percent, so that Indian States subjects will be benefited by an immense amount in case of annexation. Till that consummation is achieved it is the duty of the British Government to see that no Prince exceeds the two percent standard of the late Maharaja Scindia for his Privy Purse, so that more money may be available for progressive departments like education, commerce, industries and agriculture, medical relief and sanitation, local self government and village reconstruction etc.

The partition of Bengal was a blow aimed at the solidarity of the Bengalis by Lord Curzon and it is a matter of history what efforts were needed to get it unsettled. In the Gujarat speaking territories of the Bombay Presidency there are a large number of Indian States in the Maha Kantha, Banas Kantha, Rewa Kantha and Kathiawar Agencies ranging from the Gaekwar of Baroda and the Rao of Cutch to the pettiest Chief of three or four villages in Kathiawar totalling nearly 300. There are British Gujarat Districts also like Surendra, Bhach, Ahmedabad, Kaira and Panch Mahals. The number of such States is legion and the Gujarati speaking population has been partitioned into as many jurisdictions owing to historical causes. The solidarity of the linguistic province of Gujarat has been thus destroyed, and in any future scheme of linguistic provinces, the problem how to restore the full solidarity of the population and remove the evils of mutually exclusive jurisdictions—will have to be faced. Such a condition exists in some other parts of India also. I would suggest that the Royal Commission should be asked to recommend the ways and means of

achieving such solidarity and unity in any given linguistic province in any future Federated commonwealth of India. In my opinion we should follow the German method of mediatising the smaller states and create a sub-federation of Gujarat Kathiawar and Cutch states with British Gujarat constituting a new linguistic province with a uniformity of law and administration converting the states into so many Districts or Talukas or circles as the case may be. The Princes may either be pensioned off or, if that is impracticable, they may be treated as hereditary officers of the Government, holding their offices during good behaviour. This will unify the whole province and the population may well be trusted to develop a sort of provincial patriotism.

The same solution will apply to other parts of India where the same difficulty arises. The proposed Royal Commission may examine this question very thoroughly as it vitally affects the future constitution of the federated states of India.

In any scheme of federation there can be only two Houses, viz. the Congress or House of Commons representing the population of the whole of India including the Indian States, and the Senate or the upper House representative of the various Provincial Legislatures and Governments. There is no

place for a Chamber of Princes or a House of Representatives of States subjects, but till India becomes a full-fledged federation of United States of India, it is necessary to have a separate House of Representatives of Indian States subjects to balance the Chamber of Princes. The functions of the suggested House which is proposed by the Deccan States Subjects Conference should be that of the House of Commons for Indian States subjects while the Chamber of Princes may remain as the House of Lords with no greater Powers than that of a similar Body in England. Where there are questions of common concern to the whole of India there may be joint sessions of the Legislative Assembly and the House of Representatives of Indian States subjects and there may be a similar joint sessions of the Council of States and Chamber of Princes. The Royal Commission should be empowered to recommend to the statutory commission of 1929 what should be done for the representation of Indian States subjects in order to safeguard their interests and the redress of their grievances by the Central Government.

The problems of Indian States and their subjects are so many that it is not possible to do justice to them in a single article, but I shall be glad if my article stimulates interest in others and leads to a greater study of the Indian States problems in future by our leaders and politicians.

evinced great personal interest in the welfare of the people and in the problems connected with the administration. Lord Curzon who was present at the installation ceremony of the Maharaja rightly remarked

'We have seen the natural good sense of the Maharaja develop by steady degrees until we feel satisfied of his capacity to assume the full and final responsibility of the government of men. He has made frequent tours among his people. He has studied their wants and needs at first hand. He has thereby acquired the knowledge which will enable him to understand the problems with which he will be confronted.'

The Viceroy hoped that 'fortified by this knowledge, his (the Maharaja's) natural business-like habits and instructive self-reliance should enable him to steer a straight course.' And the Viceroy's hopes have never been belied. From the day he became the ruler, His Highness the Maharaja, assisted by a succession of brilliant Dewans has been taking Mysore right on the path of progress and today Mysore is acclaimed as the most well governed and progressive Indian state.

The Maharaja of Mysore has always been amidst his people working for and with them for the common good of all but at the same time keeping in perfect touch with and some times being abreast of all current movements and thought in the outside world. This intelligent and sympathetic administration of the Maharaja has resulted in a general advance towards prosperity of both the people and the state.

Since 1902 people are being gradually associated more and more with the administration of the state. The revenues of the state have practically doubled. Numerous large industries have been either started or fostered by the government. Thousands of acres of arable land have been brought under cultivation and great agricultural facilities given to the peasants. Large irrigation works have been undertaken. New roads have been constructed and fresh railways laid. Education is spread on a large scale. Public health and sanitation have very much improved. Great facilities for medical relief are allowed. In fact in every way Mysore has been well on the onward march of progress.

All these improvements would not have been possible without the aid of able assistance. And His Highness the Maharaja has been particularly happy in his choice of ministers and other principle officers of state. These ministers, well known for their

most unselfish devotion and genuine loyalty to the state and its ruler have all been brilliant administrators who have in succession contributed considerably to the present progressive state of Mysore.

It was, however, an act of the highest political sagacity on the part of the Maharaja when he took courage with both his hands and appointed Sir M. Visvesvaraya, an engineer all through his life to the Dewanship of Mysore in the teeth of strong opposition from all sides. And today the people of Mysore are reaping the lasting benefits and advantages of what was at the time considered a rash and autocratic action of His Highness the Maharaja. It was during Sir M. Visvesvaraya's tenure of office that Mysore has made the greatest progress and the large schemes of reconstruction formulated by this great patriot, statesman and administrator are yet being carried into action by the succeeding Dewans.

It is easily conceded on all hands that in spite of short waves of communal and sectarian animosities that threatened for a time to unsettle the steady progress of the state these twenty five years of His Highness's rule could well be the proudest period of administration for any prince in India.

The present Dewan Amin ul Mulk Mirza Md. Ismail, C I E M B E, a Mysorean by birth is an idealist to the core. At the very first public utterance after his taking charge of this high office he declared

'I regard the office of Dewan less as an appointment than as a great mission of patriotic service. He is ably assisted by the three members of the Executive Council. Mr. K. Chandy an experienced and well tried civilian of the state. Dewan Bahadur M. N. Krishnarao, who had not a little share in steering the state finances successfully through the recent crisis and Mr. C. S. Balasundaram Iyer one of the most able and distinguished members of the Mysore Civil Service, whose ability was perceived and appreciated very early in his career by the Darbar and by outsiders like Lord Kitchner. With such combination of brilliance and capacity to assist His Highness, it would be well within bounds of reason to expect that Mysore would continue to fill its proud place among the foremost progressive states.

Mysore is one of the most picturesque beauty spots in India. The long ranges of hills of the Western Ghats covered with

thickly wooded forests, the gardens and plantations, the undulating stretches of park and of fertile fields of corn, the absorbing panorama of the country through which numerous rivers run their course enhanced here and there by the awe inspiring and magnificent waterfalls and beautiful lakes, the healthy hill stations and the marvellous hill forts scattered all over the state, the many relics of ancient architecture renowned for their exquisite beauty all these and others that nature and man have bestowed on this land make Mysore the veritable Eden of South India.

Stretching from the eastern slopes of the Western Ghats the state spreads over the Deccan plateau covering an area of 29,000 square miles and has a population of about 60 lakhs. There are more than 5½ thousand miles of good roads and about 700 miles of railway connecting all important places in the state. The state maintains travellers' bungalows in every district and taluk head-quarter and on some of the important hill stations for the benefit of travellers.

The revenues of the state have nearly doubled within these twenty five years, increasing from about 2 crores to 3½ crores per year. This result is not due to mere fresh taxation in any form. It is the effect of the natural growth under the stimulus afforded by the opening out of the country through better means of communication, by the execution of important irrigation works of unsurpassed magnitude by the general expansion of industries and commerce and in some measure by the better administration of public funds.

Within this period the political institutions in the state have undergone considerable changes. The Representative Assembly which was started by Dewan C. Rangachari in 1881 and which was merely a body of men brought together from all over the state on a very limited franchise, to make representations regarding local wants and grievances, if any, was the only political institution at the time the Maharaja ascended the throne.

On accession the Maharaja expressed the hope that "it could prove a valuable adjunct to the administration and in course of time will take its proper place among the chief political institutions of the land remarkable for its spirit of independence and its sobriety." And accordingly the Representative

Assembly has since been growing both in prestige, popularity and usefulness.

In 1908, another house of legislature smaller in size but with larger powers and functions, was created. Both these institutions have now been thoroughly overhauled under the Reforms granted by His Highness the Maharaja in 1923. By this the Representative Assembly has been placed on a statutory basis and has been given a definite place in the constitution of the State. The franchise has been very much extended. Sex disqualification has been removed. The privilege of moving resolutions on the general principles and policies underlying the budget has been granted. Resolutions can be moved on matters of public administration, representations about public wants and grievances can be made and interpellations put. The Assembly is also consulted before the levy of any new taxes and on the general principles of any measure of legislation before the same is introduced in the Legislative Council. The Assembly has of course, an overwhelming non official majority.

The Legislative Council also consists of a clear non official majority having twenty official and 30 non official members. It used to exercise the privilege of interpellation, the discussion of the budget and of moving resolutions on all matters of public administration. Now it has been granted the power of voting on the demands for grants and of introducing private bills. The Council elects a Public Accounts Committee which examines all audit and appropriation reports and brings to the notice of the Council all deviations from the wishes of the Council as expressed in its budget grant.

They have also got three standing committees composed of members of both the Houses—the Representative Assembly and the Legislative Council—to allow greater opportunities to the non official representatives of the people to influence the everyday administration of the State. One of these committees deals with matters connected with the railways, the electrical and public works departments, the other with the Local Self government, Medical, Sanitary, and Public Health departments, and the third committee concerns itself with finance and taxation.

Local Self government institutions have also made a good headway. There are the village Panchayats, the taluk boards, the district boards, the Unions and the municipal

palities. The powers and functions of these institutions have been considerably enhanced. Many of these bodies are presided over by non-official presidents.

The Village Panchayat Act recently passed by the Mysore Legislative Council has made the villages the real basic units of Self-government in which the villages enjoy a large measure of freedom in the civil, criminal and civic administration of their own Village.

Apart from these, there is the Economic Conference with its committees to look to the economic interests and development of the country.

It might be mentioned here that while some of the other Indian States are making frantic efforts to cover their sins of omission and commission, of autocracy and maladministration by passing stringent laws against the Press and thus gag and stifle all healthy growth of public opinion the Mysore State has recently made substantial modifications in the existing Press Act.

Education, as everything else has made rapid strides in the state during this quarter of a century. Free and compulsory primary education has been enforced in all the cities and towns and is now spreading to the villages. Lower secondary education has been made free. Large numbers of scholarships and freestudentships have been instituted in the high schools and colleges. A net work of schools is spread all over the country, giving a school for every $3\frac{1}{2}$ sq miles and for 726 persons of the total population.

While in 1902 they had about 2232 schools for the whole state and were spending about 12 lakhs of rupees on education, today the Mysore government have established over 8000 educational institutions and spend on them more than 60 lakhs of rupees per year. The percentage of the expenditure on education to the total revenue of the state works up to about 15. How favourably this compared with the figures for the neighbouring provinces administered by the benign British bureaucracy could be seen from the following. The percentage of expenditure on education to the total revenue in Bihar and Orissa is 14, in the United Provinces it is 13.5, in Bombay and the Punjab 13, in Bengal it is a little over 12, in Assam it is 10, in Central Provinces 9.5, and Burma 9. Nearly 36 per cent of boys and girls of

school-going age in the State are receiving instruction.

The education of girls has also made good progress. There are in the state about 788 girls' schools of all kinds and grades in which about 39,000 girls are reading.

Increased facilities are being afforded for the education of the children of the depressed classes known in Mysore as Adikarnataks. About 16,600 of these children are reading in the 605 schools that are specially maintained by the state for them. Of these about 2,500 are girls. The children of this community are also allowed entrance into all other state maintained general educational institutions without any social barrier. The Government maintains four free boarding homes with tutorial classes attached to them, for the depressed class children at Mysore, Bangalore, Tumkur and Chikmagalur. Besides general education these boys are also trained in certain handicrafts, such as weaving, carpentry, mat making, shoe-making, smithy etc.

Mahomedan education is also receiving its due share of recognition and encouragement. There are all over the State a number of Anglo-Hindustani schools maintained for the benefit of the children of the Moslem subjects of His Highness the Maharaja. Special *pardah* schools are provided for the education of Moslem girls. Moslem students are given half free studentships in all the general government schools and colleges as a sort of encouragement for their prosecuting higher studies. In fact, owing to the various facilities created for the education of this community, the percentage of literacy among the Moslems in Mysore has been gradually on the increase.

On this broad based and firm foundation of primary and secondary education, has been built the edifice of the seat of culture. The Mysore University, which was started in 1916, really symbolizes the culmination of a liberal and progressive educational policy that the Mysore Darbar has been consistently following. The University has Arts, Science, Engineering including civil, mechanical and electrical—Medical and Teaching Faculties. The Arts and Teaching colleges together with a ladies college are situated in Mysore, while the science, engineering and medical colleges are in Bangalore. The University was modelled after the Australian universities, but recently it is being remodelled in the light of the recommendations of the Sadler

Commission At present there are post graduate courses in Arts History and mathematics and the starting of post graduate courses in Science is in contemplation

The progress of agriculture in the State has been greatly accelerated by the establishment of a separate department The Mysore Agriculture Department is perhaps one of the most well equipped and efficiently managed of its kind in India. It has a big agricultural laboratory at Bangalore under the direct supervision of a distinguished agricultural chemist It has established experimental farms at five different places in the State at which experiments are conducted in regard to the unit production of paddy ragi potatoes areca nuts sugarcane and other produce and the combating of certain insect pests that infest the crops and ruin them A Coffee Experimental Farm has been recently started at Balebonnur in the midst of coffee growing area to conduct experiments in regard to coffee pests Agricultural education is being imparted by the Hebbal Agricultural School where diplomas are awarded to the students after finishing three years practical and theoretical instruction Shorter courses of instruction have also been arranged for the benefit of the agriculturists at three other experimental farms The department also maintains Live Stock Civil Veterinary and Sericulture sections each under a separate expert, who is also the head of the department and with a large staff of assistants scattered all over the State

These and other facilities afforded by the agricultural department for the introduction of improved and scientific methods of cultivation and farming coupled with the numerous schemes of irrigation some of which are of exceptional magnitude carried out during this period and the large sums of money spent every year in giving liberal assistance to the peasant classes by issuing agricultural loans on easy terms to them irrespective of their being small or large holders all have contributed to a general increase in the area under cultivation and the consequent increase in the prosperity of the agricultural classes in the State While in 1902 there were 55 lakhs of acres of land under cultivation today there are 63 lakhs of acres of cultivated land thus showing an increase of more than 9 lakhs of acres of land which have been brought under cultivation during this period

Of the irrigation works undertaken in recent years, two are worthy of mention The Krishnaraja Sagara near Mysore is a reservoir created by the construction of a high dam 130 feet high across the Cauver river and is the biggest of its kind as yet constructed in India It is considered to be second in size only to the famous Assuan Dam in Egypt When completed it is estimated to supply sufficient water to irrigate 1,20,000 acres of land Apart from the benefits it is able to confer on agriculture, it has contributed to a tremendous increase in the output of electricity both at Sivasamudrum and at the Dam itself The work is nearing completion and already 20,000 acres of land are being irrigated by its canals The Krishnaraja Sagara is estimated to cost over 4 crores of rupees to the Darbar

The other the Vani Vilas Sagara is also a similar dam constructed across a river in Chitaldrug district, which was completed more than a decade and a half ago It is a beautiful lake extending over an area of about 40 square miles and has been constructed at an enormous cost It has at once facilitated the bringing under cultivation of tens of thousands of acres of arable land

Besides these, there are numerous other minor irrigation works that have been undertaken during this period and which have all added substantially to the solution of the problem of water supply for agricultural purposes

With the increase of the general prosperity of the people through agriculture, industries and commerce in the State have also made much progress The Industries and Commerce department have not been sparing in their efforts to stimulate fresh trade and industry A large number of industries had been either started or aided by the Government during these twenty five years The general policy of the Government in this respect has been to afford facilities to people who have reasonable schemes for the starting of any particular industries. They would give them loans for the purchase of machinery and other requisites on very easy terms They would give them the benefit of expert advice when possible, and do everything that they possibly could to help the industry This has resulted in the establishment of a number of weaving factories, oil mills, rice mills the manufacturing of chemicals varnishes and paints slate pencil tile factories saw mills, spinning factories, the mining of manganese and other

minerals and various other industries, too numerous to mention

In cases, however, where the public are shy or have not the necessary facility by way of expert knowledge or otherwise to take the initiative, the Government have undertaken to start such industries themselves to demonstrate to the people the value of the industry and to create the necessary confidence in them. With this object in view, the State started a few industries the chief among which are a metal factory, a button factory, a soap factory, a weaving factory, the industrial and arts and crafts workshop. Of these the first two have already gone into the hands of private companies and are working very satisfactorily. The Mysore Soap Factory produces the best soap available in India and is working well. The government is anxious to hand it over to a private body provided a suitable company with sufficient resources is coming forward. The others are maintained for purposes of demonstration and have been doing beautifully well in this direction.

Nor has Government neglected cottage industries. Sericulture, hand spinning and weaving, rattan work (cane work), toy making, lacquer work, knitting, tailoring, sandalwood carving and such others are very much encouraged. Industrial schools are started at various centres in the State for the teaching of these crafts and facilities are created for taking to any one of them either as part-time work or as a profession. Special conveniences are afforded for ladies to learn these crafts and where necessary to earn an independent and respectable living by such work.

Of course, the introduction of hand spinning as a cottage industry is of recent origin, but yet the state has been making very sincere efforts to make it popular among the masses and particularly among the agriculturists. The Mysore Administration Report states

The department (of Industries and Commerce) has taken steps to organise hand spinning as a subsidiary occupation on a large scale. A suitable improved type of Charka was designed and arrangements made to manufacture these Charkas in the Art Workshop and industrial schools in the State. Over three hundred charkas are now in use and orders for an equal number have been obtained. Private enterprise has also interested itself in its manufacture. Considerable enthusiasm was evoked in hand spinning and a spinners' Association was formed and spinning demonstrations and competitions with suitable prizes were organised. All classes of the population took interest in the demonstrations and two big spinning competitions held in the cities of Bangalore and Mysore attract-

ed great public attention. Two centres viz one at Mysore and the other at Bangalore, were constituted for the supply of carded cotton. Experiments in the utilisation of hand spun yarn were undertaken in the Government Weaving factory and printed fabrics, which have a large demand, have also been made out of these cloths."

It is now to be hoped that, especially after the stimulus given to it by the presence of Mahatma Gandhi in the State, hand spinning would become more and more popular until it becomes a part and parcel of the economy of village life in Mysore. The initiative taken by the State in this matter should also serve as an object lesson to the British Indian administrators and to the many Indian princes who have not yet bestowed a moment's thought to hand spinning as a useful part-time occupation for the peasants and farmers among their subjects.

Chief among the industrial enterprises undertaken by the Government are the Hydro Electric works at Sivasamudrum and at Krishnaraja Sagara Dam, the Sandalwood Oil Factory at Bangalore and the working of the Iron Mines at Bhadravati.

The Hydro electric works at Sivasamudrum were started in the nineties of the last century by the late Sir K. Seshadri Iyer, the then Dewan and has since been gradually developed. It has been supplying current for lighting the cities of Bangalore and Mysore and for the working of Gold Mines near Kolar, but is not in a position to supply electric current to other industrial enterprises. The construction of Krishnaraja Sagara Dam across the Canyery has ensured a steady flow of water down the Sivasamudra falls and has thus facilitated the production of a greater quantity of power at the place. At the same time current is also being generated at the Krishnaraja Sagara where water is made to fall through a height of about 60 feet for this purpose. Both these have contributed to a large increase in the production of power with the result that all the industrial concerns, big and small, in Bangalore and Mysore or in their vicinity are supplied with electric power at cheap rates. Arrangements are being made for the supply of power for lighting the towns which lie along the main transmission system. "The question of making electric power available at cheap rates to rayats willing to instal pumping plant on the banks of the Arkavati for irrigation purposes' is receiving the attention of the Government. There is a

separate electric department, which is most efficiently worked

Sandalwood is a state monopoly and the Darbar started two factories, one at Mysore and the other at Bangalore during Sir M. Visvesvaraya's regime for the extraction of oil from this wood. But the factory at Mysore has since been closed down, as it was found unnecessary and expensive. The oil distilled is very fine and has the greatest demand in England, France and other continental countries. The factory brings in a net revenue of two lakhs of rupees per month to the State coffers.

The Bhadravati Iron Works also started during Visvesvaraya's time, is the biggest industrial concern as yet undertaken by Mysore and is now in its infancy. It was for some time managed by the Tatas, but is now being worked by a board of Management appointed by the Mysore Darbar. Sir M. Visvesvaraya is the chairman of this Board and is in sole charge of the works.

The blast furnace here has been built at a cost of about 2 crores of rupees. Due to abnormal conditions that prevailed during and after the Great War and the heavy odds under which the concern is being worked, the capital expenses on the Iron Works have been rather a little heavy and it has been worked for some time at a great loss. Now after Sir Visvesvaraya took direct charge of the works the losses have been considerably minimised by the proper utilisation of the by-products and effecting drastic economies in the working expenses. At the same time, special efforts are being made to increase the output of pig-iron. The furnace now produces about 60 tons of pig-iron every day. The plant is practically in a position now to maintain itself without the incurring of any losses.

The Iron Works are completely manned by Indians, mostly Mysoreans, some of whom have received special training abroad. The patriotic fervour and the spirit of self-sacrifice with which these people are working at the Iron Works is well illustrated by the generous way they voluntarily agreed to forgo a share of their emoluments ranging from 6 1/4 to 10 per cent during the six months from November 1925 to April 1926. But it is, however, unfortunate that there are certain malcontents in the State that are carrying on propaganda against its author, Sir M. Visvesvaraya and the Government for starting and working the Iron Works. These

people do not seem to appreciate the immense possibilities that the Bhadravati Iron Works holds forth for the Industrial development and the general prosperity of the State.

Of the other activities of the State that have contributed to the economic prosperity of the people, the work that is being done by the department of co-operation deserves mention. Innumerable co-operative credit societies and stores have been established in all the cities and towns of the state, which are a source of the greatest help and relief to the middle class people.

A net work of rural co-operative societies to help the agricultural classes with money, seed, etc., and thus save them from the clutches of the usurers, are working in the villages in all parts of the country. There are also professional co-operative societies in some places, such as, weavers' Societies, tailors' Societies and so on. Then there are, of course, the district and provincial co-operative banks. The co-operative movement has helped to considerably bring down the indebtedness of the rural population.

General health and sanitation in the state have also improved. Lakhs of rupees are being spent every year by the government for improving the sanitary conditions of the towns and villages. Medical aid is made available to the greatest number of the population. There are today more than 200 dispensaries for the whole state. The Victoria Hospital at Bangalore and the Krishnarajendra Hospital at Mysore are the two general hospitals maintained with public funds. There are district hospitals with limited number of beds. Along with these there are special hospitals for the treatment of various diseases. The Minto Ophthalmic Hospital at Bangalore is well known throughout South India. An Epidemic Diseases Hospital, a Leper Asylum, and a Lunatic Asylum are also situated in Bangalore. There are Maternity hospitals in Bangalore, Mysore and Robertsonpet. The Princess Krishnarajammal Sanatorium at Mysore treats tuberculosis patients.

Indigenous systems of medicine are also encouraged. The Government maintains a big Ayurvedic College at Mysore. It has newly started, as an experimental measure, an Ayurvedic and Unani dispensary at Shimoga. Some of the municipalities are also following suit.

Unlike in British India, the interests of the people and the authorities are

identical in an Indian state. And with a ruler like the present Maharaja and a sympathetic administration, Mysore has made great progress during these twenty-five years. The community of interests that exists between the authorities and the people is a very hopeful sign for the future of Mysore. And there could be no doubt whatever that it would lead to a general prosperity of the people and to a healthy growth of national life among them. In this connection one cannot do better than endorse the statement made by the present

Dewan before the Representative Assembly :

Let us by mutual friendliness and good understanding see that the ancient vision of a united national life is restored in its fulness. I feel that any one amongst us, including myself, who sought to use this Assembly for purposes narrower than the universal service of the state would thus dishonour his office. If we as a state are to achieve real progress and to win the regard and approbation of the outside world it is necessary that we should always look at things from a national standpoint and deal with the problems that face us, and some that distress us today, on lines of Co-operation, Co-partnership, and mutual goodwill. (italics mine)

LUCIFER'S LAMENT

By NAGENDRANATH GUPTA

Ah ! the hurts and aches of Creation, the wail without surcease ,
The Wind ever sighs or shrieks in agony as a wandering, lost soul ,
The Stars tremble in eternal terror of impending doom
Or, in a frenzy of fear, leap headlong into sudden death '
Red with wrath burns the fierce, driven Sun,
Pale and wan and lustreless waxes and wanes the Moon ,
And vast Space mourns, silent, the darkness of her hair shrouding her face '

The Sea is salt with the tears of the Universe,
And the foaming waves heat a refrain of woe on the shore ;
The bowels of the Mountains groan with the cries of chained Titans,
The Earth quakes and is rent with pain, and her white blood gushes forth '
And the trees sway disconsolate, rocking with their grief ,
Open are the wounded hearts of flowers—blood red and pallid white,
And the mantle of the Dawn is wet with the tears shed by Night,
And shades of sadness mingle with the gloaming of Twilight '

The fret and fever of Life, the travail of Birth and the fearsomeness of Death,
The mystery and menace of the Unknown, the brooding of the Spirit ;
The blinded Thoughts that come and go and never find a way,
The Hopes that are born to be blasted, the Fears that are born to bide ,
The questionings that are never answered, the Quest that never finds ,
The Door that is never opened, the Call that is never heard,—
Ah me ! all this is a weariness without end,
And my anguished soul yearns for the peace that is not

That notion has entirely disappeared." But the matter is not so simple in actual practice. The shareholders expect a certain return on their investment however small it might be. It is for this reason that specific additions to the functions of the South African Reserve Bank had to be recommended in the Hemmerer-Vissering report. The recent Banking Commission in Ireland rejected the proposal for a separate central bank for the same reason. There are three ways for solving this difficulty by limiting the rate of dividend by making the State the sole proprietor or by making the State a part proprietor. The first method has been followed in most of the central banks. The most prominent example of the second is the Commonwealth Bank of Australia, which has figured so much in recent discussions. An example of the third is offered by the central bank of Switzerland 20ths of the capital being contributed by the Cantons 20ths by the public and the remaining 10 by the old banks of issue.

STATE OWNERSHIP

State proprietorship, in part or in whole raises fresh difficulties. It will be conceded even by the most ardent Socialist that politics should have nothing to do with finance and state ownership is an evil which should be avoided. Arguments in favour of this view may be readily obtained from the proceedings of the Genoa Conference, the Hemmerer-Vissering report and the address recently delivered before the Economic Society in Melbourne by Sir Ernest Harvey Comptroller of the Bank of England who was on a visit to Australia at the invitation of the Commonwealth Bank to give his views on central banking. Put briefly the main argument against the establishment of a Statebank whether central or commercial is that it is called upon to grant facilities for political reasons in cases which would not commend themselves to ordinary banks as remunerative propositions. But the whole aspect of the thing is changed if it is conceded that in the case of some countries at least it is in the national interest to impose such disabilities on the State. The reason for such differentiation is obvious. What is true in the case of creditor and economically advanced countries which are politically free to lay down their own national economic policies may not be necessarily true in the case of debtor and less advanced countries on which are frequently forced measures ostensibly in their own interests but really in the interests of their financial creditors and political masters. It must not be forgotten that the League of Nations and its various Committees are dominated by people living in circumstances wholly different from those obtaining in comparatively un-developed countries, and in the case of the latter State ownership may be a necessary evil.

PROPRIETORSHIP BY MEMBER BANKS

It was stated above that in the Swiss National Bank a part of the capital was contributed by the old banks of issue. This feature is present also in the South African Reserve Bank and many other recent central banks. For instance in the Banca Central del Ecuador recently proposed by the Hemmerer Commission, the authorised capital

of 10 million sucres (5 sucres being equivalent to one U.S. dollar) is to be divided into 'A' and 'B' shares of 10 sucres each the former to be held by the banks operating within the country and the latter by the public. There is an obvious advantage in allowing the commercial banks in the country to participate in the profits in this way for the central bank can then count on their good will and co-operation. It is all the more necessary for a central bank has frequently to carry on commercial banking for a proper discharge of its duties and may thus antagonise the member banks in the absence of proper safeguards.

RESERVES

The percentage of reserves to note issues and the composition of reserves show great diversities. It is not true as stated in a recent book on Indian banking that all the banks of issue excepting the Bank of England accept foreign bills in their portfolios and reckon them in their note reserves. In Norway for instance all issues above the fixed fiduciary issue of 200 million kroner must be backed by gold alone. Not only are gold equivalents permitted in certain central banks the percentages also vary—from 20 per cent in the case of Russia to 60 per cent in the case of Spain for all issues above 4 billion pesetas to the extent of 40 per cent. In most cases again reserves have not only to be kept for notes but also for demand deposits the percentages varying from 21 per cent in the case of Austria and Czechoslovakia to 50 per cent in the case of Chile, Ecuador and Peru. The former ratio is however regarded as too low. It is provided by statute that the percentage will have to be gradually increased to 33½ per cent in the case of Austria and 30 per cent in the case of Czechoslovakia. For certain issues again beyond prescribing a certain maximum limit, no other restrictions are imposed e.g. for currency notes in England and for notes issued by the Bank of France.

PROPORTIONAL RESERVE

15

FIXED FIDUCIARY RESERVE

What are the reasons for this almost endless diversity? In a country which is predominantly agricultural the issue of notes must be necessarily elastic temporarily expanding during busy seasons to finance the exports. We can therefore lay down the general proposition that the proportional reserve system imparting as it does the necessary elasticity to currency will be suitable for agricultural countries. For a proper working of this system however there must be a large supply of eligible commercial bills, a feature which is frequently absent in many agricultural countries. Not only this there are other reasons for discarding the proportional reserve system and adopting the fixed fiduciary system. A free market for gold like London must be subject to large withdrawals of gold which will result in contraction of credit by three times the amount if a 33½ per cent reserve is maintained and this must hamper the economic activities of the country. As a set off against this it must be remembered that the fiduciary limit cannot be estimated offhand but only as a result of experiments extending over a long period.

Part II

THE RESERVE BANK QUESTION

As a matter of fact, this system is in vogue in only one country of importance viz Norway England having currency notes in circulation side by side with the Bank of England notes. Moreover, the system was adopted in England when deposit banking was in its infancy. The recent tendency is to maintain reserves not only against notes but also against demand deposits and clearly the system of fiduciary reserve is not suitable in such cases. Even in England eminent bankers like the late Dr Walter Leaf and Mr Reginald McKenna have suggested the proportional reserve system when currency notes will be taken over by the Bank of England.

RELATION WITH MEMBER BANKS

The relation of the central bank with the commercial banks in the country also raises complex issues. It is generally agreed that the functions of the two are quite distinct. As has been well put by a recent writer the central bank is the spring from which the water of life wells up the commercial banks are the pipes and channels by which it is conducted to a thirsty economic system. In theory the central bank may be a marginal lender of funds but is it realised in actual practice? Have we not had instances of central banks competing with member banks on grossly unfair terms, refusing as they do the interest free deposits of the member banks? The Bank of England has in recent years tried to maintain the high tradition of working in public interest and not as a mere money making concern. But it is a matter of common knowledge that during the 1896-97 period when credit went a begging it offered serious competition to English joint stock banks specially in its branches. Should the member banks then be permitted to have not only a share in the profits as stated above but also a voice in the management of the central bank? There is no question that the wealth of experience of practical bankers will be of the greatest possible value. But it is also true that a director from any commercial bank must stand in the way of a proper scrutiny of bills offered by it for discount. The fact should not be forgotten that in the absence of adequate safeguards directors frequently try to finance their companies with monies obtained from banks over which they may have control. Apart from this a seat on the directorate of the central bank will enable a director of a commercial bank to have an insight into the working of his competitors which is clearly undesirable.

CONCLUSION

I have now come to the end of the first part of my paper devoted to central banking in general. This is by no means an exhaustive survey but sufficient has been said to establish that it is impossible to lay down doctrinaire principles holding good in all times in all countries under all possible circumstances. One must not forget that even at best economic theories only summarise economic tendencies, their actual working being dependent on the environment. This is a truism but has nevertheless to be emphasised when approaching the Reserve Bank question.

This essentially practical nature of the problem has subjected the Reserve Bank Bill to a good deal of criticism even the name not being immune. It has been suggested not by an ardent nationalist but by a sedate banker that the name savours of Americanism and should be changed into 'Bank of Hindustan'. I must confess I am unable to agree with him—specially when I remember the tragic fate of the first institution of that name, started about 1770 by the great Agency House of Alexander and Co. Be that as it may, there is no gainsaying the fact that this measure has elicited criticism in diverse quarters. It is also true that this Bill is the first important piece of legislation which has been referred to a Joint Select Committee of the Legislative Assembly and the Council of State.

PRELIMINARY CONSIDERATIONS

Not being tied like the Joint Committee to the draft Bill published in the Gazette of India Extraordinary on January 17 1927 let us go into the preliminary considerations. The main point is that India is a country of cash transactions. The control of credit here must be subordinate to the control of currency unlike countries with highly developed credit systems like England or U.S.A. In fact the conditions here to-day resemble the conditions in England about a hundred years ago when deposit banking was in its infancy. It will therefore be necessary to give greater attention to currency than to credit in India. Besides in the absence of a regular bill market the power of the central bank to control credit cannot be paramount and will frequently amount to moral suasion only in addition to control of currency.

THE CURRENCY QUESTION

To take up the currency question first we have seen how the abstract theory in favour of inconvertible paper currency has to be discarded as impracticable. Similarly all the learned disquisitions of the Hilton Young Commission about the effective linking of notes to gold under what it chose to call the gold bullion standard can convince only the official apologists. The obvious fallacy in having a wide margin between the buying and selling rates is neatly exposed by a recent writer in the following words—'One fails to see how this gold bullion standard may be called a standard at all when gold will admittedly vary from its par value by as much as 23 per cent. If a yard stick is sometimes equal to 36 inches and sometimes to 36.8 inches no scientist would accept it as a standard of measurement.' It is a matter for sincere congratulation that the Joint Select Committee has been able to reduce the selling price for gold in the teeth of determined opposition from Government to Rs 213.10 per tola plus single transport and interest charges for delivery in Bombay instead of the double transport and interest charges as recommended by the Commission and proposed in the Bill. The reduction of the minimum saleable quantity to 250 tolas instead of the impossible 1000 tolas is

also a step in the right direction. It is an open secret that Sir Basil Blackett and the Government of India are resisting the demand for the mintage of mohurs not of their own free will but at the dictation of Whitehall. They too are convinced of the necessity of finding some further and more direct and visible means for bringing it home to the masses that gold is the standard of value.

STATE OWNERSHIP

Confidence in currency which is the *sine qua non* of success of the proposed issue can be secured only by associating it with Government in the existing circumstances in India. This was tacitly admitted by the Commission when it recommended that the Reserve Bank notes should be guaranteed by Government. I confess I am unable to appreciate how the payment of a note which is to be legal tender can be guaranteed for obviously to guarantee the payment of such notes means a guarantee to pay one type notes by another. If it is interpreted as a guarantee to convert it into gold at the stipulated rate the Reserve Bank must be said to have the doubtful distinction of being the only central bank which provides such a guarantee. The truth of the matter is that the Commission proposed to do the impossible by recommending a central bank for India independent of government. It is to be hoped that in a fit of petulance Sir Basil Blackett will not resurrect the shareholders' bank to which the Joint Committee has given the quietus at Bombay. There are many practical considerations which may be adduced in support. For instance if it is a State institution no share capital need be issued. This will prevent on the one hand the present unseemly wrangle among Imperial Exchange and Joint-Stock Banks for participating in the share capital and on the other any possible loss in the initial stages in the absence of a well developed bull market. If necessary debentures may be issued later which will in any case be a cheaper method of raising money. The only objection to this measure is that it is merely a case of a government bank taking the place of a government department charged with the control of currency. In other words it is a case of King Stork being solemnly installed in the place of King Log.

CONSTITUTION

This brings us at once to the question of control of the central bank for that is the real crux of the problem. It has been publicly stated that the unbending attitude of Sir Basil Blackett towards the exclusion of the legislative bodies from the bank is due to definite instructions received from the Secretary of State in the matter thus furnishing another instance, if any were needed of the much vaunted financial autonomy of India. It should be remembered, however that the disqualification of members of legislative bodies from having a seat on the directorate has been removed in spite of the strenuous opposition offered by Government members of the Joint Select Committee—an opposition which is quite in keeping with the usual practice of disenfranchising large bodies of people by setting up communal as distinguished from joint electorates for the

legislatures. In this matter Indian nationalists have the support of men like Sir John B. H. and Sir Felix Schuster who are as acutely conscious as Government of the experience of this system notably in Australia and partly in South Africa. Be that as it may it is now possible for Councillors and Assembly members to be elected to the Board of Directors through the various Chambers of Commerce either European or Indian and they should have therefore no reasonable cause for complaint. The commercial and co-operative banks also should take a similarly reasonable view of the matter and not insist on being elected as such but through Chambers of Commerce in the usual way.

RESERVES

The question of the proper system of reserves has been similarly a bone of contention. Mr. Jammadas Mehta it is stated informed the Joint Committee that he and his friends who supported the fixed fiduciary system and were opposed to the proportional reserve system reserved their opposition till the discussion in the Assembly. It is to be hoped that wiser counsels will prevail. As has already been stated the trend of central banking in all countries is towards the proportional reserve system. The only point for consideration is whether reserves should not be kept against demand deposits in the same way as against notes following recent practice in other countries for there is no valid distinction between the two. Apart from this as open market operation will have to be permitted to the central bank often in competition with commercial banks with their own monies compulsorily acquired interest free by statute it is clear that from the ethical point of view if from no other some obligation should be imposed on the central bank in the matter of deposits.

COMPENSATION TO IMPERIAL BANK

The compensation to Imperial Bank is another thorny question. This almost reminds us of compensations extorted from the puppet Nawabs of Bengal in the early days of British rule in India. A compensation presupposes some sacrifice but what is the sacrifice involved in this case? At most, it is the withdrawal of some special privileges when the occasion for such is no longer existent. But Sir Basil Blackett seems to have a deeper sense of the 'wrong' done to the Imperial Bank than the Managing Governors themselves. Sir Basil it is said explained to the Joint Committee that although the agreement with the Imperial Bank would expire in 1931 it was understood at the time the agreement was made that it would be continued, there was no legal obligation to make allowance for that implied understanding but there was certainly a moral obligation. We should like to know who imposed this moral obligation behind the back of the people and the unsuspecting legislature which passed the Imperial Bank Act. It must have been some responsible member of the Government whose unauthorised promise is now pricking the conscience of the Finance Member. It seems however that in fact no such wicked promise was ever made for, in their letter dated June 23 last addressed to Rai Pramatha Nath Mullick Bahadur, the Managing

Governors explicitly stated that after January 1931, the Imperial Bank will have no legal claim for any Governmental benefits and also no moral benefit rights. This extreme solicitude on the part of Government to do justice to the Imperial Bank reminds us irresistibly of the old lady in the Bengali proverb who bears greater affection for a child than its own mother. As this question has been ably dealt with by Prof J C Sinha in the July issue of the *Modern Review* his arguments need not be repeated here. Suffice it to say that instead of tying down the Reserve Bank to a definite scheme of doles to the Imperial Bank a money award may be made for the alleged sacrifices by a board of arbitrators and failing that the Reserve Bank should be brought into being after January 1931.

CONCLUDING REMARKS

I have confined myself to the main issues leaving minor details severely alone but I am afraid that I have already trespassed on the time set apart for discussion and must crave your accustomed indulgence. I would conclude by merely pleading with Government as well as legislators to realise fully their responsibilities as laid down in the preamble to the Bill—to establish a gold standard currency with a view to securing the stability in the monetary system of British India. What I apprehend is that this preamble may turn out to be a mere pious wish our Government following the dictates of Whitehall and our legislators guided by empty catchwords of politics.

[A paper read before the Bengal Economic Association on Thursday, August 11, 1927]

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu Newspapers, periodicals, school and college text books and their annotations, pamphlets and leaflets, reprints of magazines, articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc. according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M R.]

ENGLISH

THE MYSTERIES OF THE BIBLE By Sital Chandra Chakravarty, M A. Vidyandhar with a supplement Pp 39+4 Price 18/-

The mysteries are the origin of the serpent idea, the forbidden tree, the temptation, the original sin, crucifixion, resurrection and Holy Ghost.

Quotes some parallel passages from Hindu religion and philosophy. The author believes that Christ in his crucifixion took upon himself the sins of all.

JESUS THE AVATAR By V Chakla Rai, B A. P.L. Published by the Christian Literature Society for India Pp 229 Price one Rupee

There have recently appeared four notable books on Jesus and we place the conclusions of their authors side by side with that of our author.

(i) Jesus is God or God is Jesus? (our author p 57)

(ii) A careful study of 'the story of his [Jesus]' life reveals to us not God taking on the form of man but a man rising to fellowship with God. (The Story Behind the Gospels by B M. Allen M A LL B)

(iii) The foundation of all Jesus' preaching and teaching was simple and simple it was his knowledge that he was a son of God and that all men might be sons of God like him. (The Life of Jesus by J Middleton Murry)

(iv) "Jesus was a Jew and a Jew he remained

till his last breath." Jesus never regarded himself as God. (Jesus of Nazareth by Joseph Klausner Ph D)

(v) Jesus never existed as a man but is a wholly legendary figure—Jesus A Myth by George Brandes)

Brandes is a Danish scholar and one of the greatest critics of modern times. Klausner is a Jewish scholar. Murry and Allen are Christians. Our author is a Christian convert.

European scholars are becoming either liberal or sceptical on the Jesus question. But our author an Indian convert is going back to the crudest form of Medieval Orthodoxy.

MANIA CH GUOSH

PSYCHO-ANALYSIS FOR NORMAL PEOPLE By Geraldine Foster Oxford University Press Pp 232 size 6 3/4 Price 2/6 net

Contents—eight chapters and a bibliography Introduction. Terminology. Instinctive Energy. Fear. Adult fears. The Power instinct. The Sex instinct. Dreams. Sublimation and Religion. Bibliography.

In the Preface the authoress writes "This little book on a big subject was begun at the suggestion of the matron of a public hospital, who deplored the lack of a manual of practical psychology on modern lines. It is also in some degree the outcome of the remark of a well known examiner in psychology, to the effect that the papers of candidates for the teaching profession seldom show any realisation of the practical bearing

of psychology on the work of educating and training children the present book is an effort to set forth in the simplest possible way the main principles of analytical psychology in its application not to the insane, perverted or abnormal but to the ordinary people whom we meet everyday.

Modern educational machineries in India seem to be very shy of psychological implications. Applied Psychology cares away most of our British mentalities to whom Psychology as a science is almost a myth. But a small book like this will do no harm to one. The general public will find the book quite interesting. The bibliography adds to the interest in the book especially the list of fiction embodying new Psychological principles. We should request the authoress to change the heading of the last chapter in the next edition of the book and rename it as Sublimation and Christian religion.

A K S

WESTERN CIVILISATION By Gandra Chalerberty
To be had of Vyaya Krishna Brothers Calcutta
Pages 92 Price Rs 14

The readers who go to this book in order to find in it a discussion of Western Civilisation in the abstract will be disappointed but those who wish to read interesting descriptions of the people and principal cities of Europe and America will find themselves amply rewarded by a perusal of it. The book is indeed a good guide book for those who intend to visit Europe and America.

GURU NANAK AS AN OCCULTIST By Professor
H. C. Kumar B.A. Bandhu Ashram Hyderabad,
Sunda Pages 44 Price Rs 4

We are afraid the author reads too much between the lines in the writings of Guru Nanak and his book therefore savours of special pleading. Anyhow the author is to be complemented on presenting a difficult philosophical thesis very lucidly.

DICTIONARY OF PUNJABI PROVERBS By S. Kishan
Singh, Officer P.W.D., Burma Pages 41
Price Rs 8

The scope of this book is modest and does not justify its ambitious name. Still the pains which the author has taken in compiling this volume are commendable. The rendering of the Punjabi proverbs in English is not felicitous in many cases and the author will do well to revise it in the next edition.

DEWAN CHAND SARKA

THE POLITICAL IDEAS OF THE ENGLISH ROMANTICISTS
By Crane Brinton, Oxford University Press
Price Shillings 15 nett.

English Romanticism was the product of the hundred years 1750-1850. Looking at all aspects of English life this period was probably the most changeful in the whole history of England. Materially speaking tremendous development and progress is noticed during these one hundred years. One may however ask what connection it is possible to find between this progress and the literary movement known as Romanticism? The answer is that to understand any aspect of human conduct truly and thoroughly one must

study the whole field of human conduct critically. It is the mind of man that is fundamentally responsible for all that man achieves. Thus it may be said that the English Industrial Revolution was not merely an isolated material fact but it was the material manifestation of a wider revolution in English outlook and thought that took place in the years referred to above.

But why should one write a special book on the political ideas of a number of literary men? The justification for this is found in the fact that some men of letters have been profound political philosophers, makers of creeds and leaders of men as well as artists of the finest sort. Further justification is found in that men of letters play an important part in disseminating the ideas of others and in that in their thoughts we often discover the political ideas of the average man of their age.

The author introduces us progressively to Jacobin and Anti-Jacobin. The first Generation of Revolt (namely Wordsworth, Coleridge, Southey etc.) Tory and Radical (Scott and Hazlitt) the second Generation of Revolt (Byron and Shelley) and certain other writers. In his conclusion the author indulges in a little speculation—a little Psycho-analysis of the men who were the Pioneers of the modern movements in thought—and in a little optimism. The progress of democracy in the present age is not heading us for intellectual extinction far from it. The author believes we are moving towards even better things for we are becoming more and more precise in our thought, more thorough and scientific in our inquiries. Our heresies are really expressions of our intellectual humility for in them we own up our greatest doobts.

The book is well got up and well printed.

CASES OF THE LAW OF THE CONSTITUTION By
Berrie A. Bicknell of the Middle Temple Barrister
at law Oxford University Press Price Sh. 7 6 nett

In this book we find summary of a large number of important cases which go to illustrate the working of the Law of the constitution. The cases are classified as relating to (1) The Sovereignty of Parliament, (2) The privileges of Parliament, (3) The House of Lords, (4) The Relation of the Prerogative to Statute, (5) The Petition of Right, (6) The Rights and Liabilities of Servants of the Crown, (7) The Administration of Justice, (8) The Rights and Duties of the Subject, (9) Aliens and Nationality and (10) The Relation of the Crown and Parliament to the Empire. The book will prove valuable to students of Constitutional Law as well as to practising lawyers.

A HISTORY OF EUROPE THE MIDDLE AGES By
Jerre L. Phunket, M.A. (Oxon) and EUROPE AND
THE MODERN WORLD 1492-1914 By R. B. Vinal
Fellow of Corpus Christi College, Oxford Oxford
University Press Price Sh. 8-6 nett. Demy oct.
Pp. 506+xx, cloth bound with 28 maps and 140
illustrations.

This is one of the finest text books of European history that we have come across. The authors do not take history as a catalogue of political events only they put special stress on the cultural aspect of the story of nations. The numerous illustrations add greatly to the value of the book.

and the low price makes it eminently suitable as a college text book. We hope our University authorities will give this really good book a trial.

MY SYSTEM OF PHYSICAL CULTURE. By Captain P. K. Gupta late of the Indian Medical Service. Lecturer on Physical Culture under the auspices of the University of Calcutta. Published by the author at 101 C Musulbari Street Calcutta. Price Rupees three and annas eight only.

Captain Gupta is a well known physical culturist of Bengal. Many people have developed an enviable physique under his guidance and many more have regained their lost health as students of the Captain. Being a qualified medical man a fine wrestler and a very strong man Captain Gupta holds an altogether unique position among our physical culture experts. His book is the outcome of years of study and experience and will doubtless prove a great asset to men aspiring after a better state of health and physical vigour.

A ECONOMIC HISTORY OF ENGLAND 1066-1871. By Charlotte M. H. B. A. London. Late Head Mistress of the County School for Girls Bromley. Published by the Oxford University Press. Price Sh. 7 6 nett.

The authoress has tried to remove the want of a book which will tell beginners about the life and activities of the people who lived in the land in the past. Such a book has been in demand for the last few years for history these days no longer means mere political history—history of the people at the top only—the life of the majority who formed the nation deserves more attention. The book is well written, profusely illustrated and nicely got up.

never dreamt. Wars that might have taken place developments that stopped prematurely and other unknown and unheard of matters crowd the pages of this interesting book. It is almost like a collection of rare political documents.

Good printing binding and general get up make the book doubly attractive. All sound readers will like it.

A. C.

INDIAN STATESMEN. Published by Messrs G. A. Natesan & Co. Madras. Price Rupees Three 1927.

At a time when the question of the future of Indian States and their place in the prospective democratic constitution of India is agitating the public mind the volume, under notice, is sure to receive welcome from all quarters. In this book the publishers have given life sketches (with illustrations) of eminent Indian administrators of some of the well known native states of India. Besides being a biography the book presents a brief historical survey of the evolution of native states in India because with the lives of distinguished dewans and prime ministers like Sir Salar Jung, Sir M. Visvesvaraya, Rajah Sir I. Mahabhar Rao, Ramesh Chandra Dutt etc. are linked the fortunes of many first class native States in India. And our publishers correctly observe Hyderabad without Sir Salar Jung, Nepal without Jung Bahadur or Gwalior without Sir Dinkar Rao is inconceivable. Bhavnagar and Oodishwar, Mysore and Raichawar, Travancore and Sir T. Mahadava Rao, Pudukottah and Sir Sashib Sastri are so intimately connected that neither the history of the States nor the lives of the statesmen can be complete without the other.

In this connection it may be pointed out that the illustrations of this book are not up to mark and in it we miss the life story of many prominent administrators of Indian India. We hope that in the next edition the biographies of Dalhousie, Naoji, Sansar Chandra Sen and other capable and distinguished administrators would be incorporated. In offering our congratulations to the publishers for their attempt to bring under one cover critical sketches of the lives and achievements of notable Indian dewans and prime-ministers we hope that this book will be universally appreciated.

THE SOUL-GOSPEL OF OMAR KHAYYAM. By J. F. Saklatvala. Miniature Edition (5 1/2 x 1 1/2) Limited circulation. Bombay 1926.

Mr Saklatvala has in his collection translations of the Rubayyat of Omar Khayyam in many languages. The dainty little book under notice contains English renderings of some of Omar's Rubayats from the original Persian. The printing and get-up leave nothing to be desired.

P. C. S.

ANCIENT INDIAN TRIBES By Dr Bimalacharan Law M.A. Ph.D. Published by the Punjab Sanskrit Book Depot Lahore Price Rs 3 8

The early history of India still remains to be written. We have not yet got any systematic and complete history of early India—both political and cultural from any scholar. We have only a few scholars here and there, who are just reconstructing a few phases of the early Indian history. We know that in ancient India there were many tribes which tried to establish their kingdoms in various parts of India. In the present work Dr Law tries to trace the history of the Kasis, Kosalas, Asmakas, Magadhas and the Bhujas. He has utilised all the available materials from the Sanskrit Pali and Jain sources. The book is published in the Punjab Sanskrit Series which deserves to be patronised by the educated Indians. Dr Law has done good work in collecting all the facts about these ancient Indian Tribes.

P B

SANSKRIT

THE SATAPATHA BRAHMANA IN THE KANVYA RECENSION—Edited by Dr W. Caland M.A. Professor of Sanskrit at the University of Utrecht. Vol. I. Published by M. N. Lal Bhatnagar Dir. of the Punjab Sanskrit Book Depot Lahore. Price Rs 10

Many Vedic texts have been published, properly edited and translated by the European scholars. But so long the Satapatha Brahmana in the Kanvya recension had not been taken up by a competent scholar though Professor E. Zeller of Flintburgh had already rendered a service to Sanskrit scholarship by his excellent translation in the Sacred Books of the East, of the Satapatha Brahmana according to the recension of the Madanandinas. It was also announced in 1893 that Prof. Eggert would edit the Kanvya recension also in the Anecdote Oxoniensis. Towards the end of 1908 it was found out that Prof. Eggert had given up the plan of publishing the text for want of sufficient materials. It was then that Dr W. Caland of the University of Utrecht took upon himself the task of editing the Kanvya recension for the first time. The result we find in the book under review. It must be admitted that Prof. Caland has done a great service to the cause of Sanskrit learning by offering the text for the first time to the Sanskritists. He has added a well-written introduction to the book in the introduction he discusses such topics as the Vedic literature and the Kanvya Satapatha Brahmana, the manuscripts of the present text, grammatical peculiarities of the Kanvya recension and the relation of the Kanvya books 17 to the kindred texts. In the present book we have only the first part of the work covering over 200 pages, and the running portion would cover about 500 pages more. It is an expensive work undertaken by the Punjab Sanskrit Book Depot, which we hope will be patronised liberally by the lovers of Sanskrit learning. We wish Dr Caland success in his undertaking and commend the work to all cultured Indians.

P B

GUJARATI

KUMAR NAN STRI RATNO By Indulal K. Jayul. Printed at the Saurashtra Printing Press, Ranpur Paper Cover Pp 207 Price Rs 1 0 0 (1926)

Six vignettes of Indian Womanhood, so set in their frames of our domestic and social life as to transform a misogynist into a woman lover. Without indulging on our ancient lore or Puranic traditions, the compiler has presented the ideal of woman's service to society and family so as to make her fit in with their existing structures. The modernity of the education of the girls and women of these stories does not militate against the object intended to be fulfilled. That is the beauty of the compiler's pen.

MCIRU-E SMAYAN, THE DISCIPLE OF SATY By Thakur Virajay Vasa vi. Printed at the Gujarati News Prints & Press Bombay Cloth bound Pp 215 Price Rs 2 8 (1927)

The other name for the book is the excesses of the Moplahs of Malabar. It is a vivid word picture of the fanatical outburst on the part of the Moplah Muslims of Malabar six years ago (1921). Incidentally the author tries to expose the fallacy of those who preach that the Koran enjoins the principle of religious toleration. He also leechily points out the sad result of treating a very large part of her Indian brethren as un-true bibles, an evil rampant in its worst aspects in South India. It is based on a Marathi Novel. Its style is the one usual with the author edited and Sanskritised. It is full of historical information.

SAROVAR NI SUNDARI By Ramantil Nanalal Shah

A very small booklet retelling in the author's words the story by Prof. Ban of Livery of Eve, in simple style suitable for little children. The title in Gujarati is misleading though correct as far as facts go as Princess Apurajita did come out of a lake the book being based on an English one. Leads one to think as if it had something to do with Scott's Lady of the Lake.

JAK HE ZEHR By the late Mr. Chumal Prayagam Munwar. Printed at the Prayabindin Printing Works, Ahmedabad. Thick Card Board. Pp 201 Price Rs 1 4 0 (1924)

Money or Poison? This is the title of this Novel and the writer has commendably shown that in the hands of unscrupulous person possession of wealth is not a blessing but a curse. The interest of the narration is well sustained and the sequence of events such as could easily be followed by an average reader. The 'silent' Munira is the hero of the piece and the character of Ramu the humble but loyal gomastha well drawn.

We have received the following books from the Commissioner of Education and Vidyadharani Baroda State

1 THE ROCK INSCRIPTIONS OF ASOKA By Bhanusulthram V. Mitha.

"MOTHER INDIA"

By AONES SMEDLEY

Mother India By Katherine Mayo. Published
by Harcourt, Brace and Company New York 440
pages.

THE writer of this book says she went out
to India with a free and open mind to
study conditions and not to write a
propaganda book. And so her first step is
creating an "unprejudiced atmosphere was—
to go to India Office in London and explain
her plan. The result is that she has achieved
a brilliant stunt of British propaganda and
could not have done better had she been
bought and paid for it by India Office
itself. She seems to have displayed a re-
markable genius for meeting English men
and women who could show her the darkest
side of India in a convincing manner for
picking out just these Indians who are boot
lickers and who shudder to think of the

awful thing that would happen were India
free for meeting Indian princes who are
such noble chaps, or for reading those
books or extracting passages from books
whose chief virtue is damning India and
fanning British role. As I said, hers is a
brilliant achievement. An English Viceroy
could not have done better on twice the
money.

Her chief song and dance is the social
evils of India—child marriage purdah en
forced widowhood the lack of discipline in
sex life untouchability, and so on. That is
the prelude which occupies half of the book.
The latter half is devoted to apologizing for
British rule for refuting the political charges
of the Indian movement for freedom for
showing how noble the English are and how
rascally and dishonest the Indians. She

reminds me of the speech of Jawaharlal Nehru, the delegate of the Indian National Congress to the Brussels Congress against Imperialism, in which he said

'Having disarmed and emasculated us they now say we are unable to defend our country having destroyed our system of education they now say we are too ignorant to rule ourselves.'

It is not my intention to do anything but admit the social evils that exist in India. Every Indian with a shade of honesty in him must admit them. In this respect, Miss Mayo has told of horrors which as individual facts, appear to be true and which should make every Indian ashamed of the social system which tolerates them.

She gives one case after another of little girl children being used to death by their husbands, of physical injuries that ruin their lives, of men who demand their little girl wives back from a hospital because they require them for their use of the dwarfing and stunting and ruination of one generation of women after another in the vile name of religion and social custom, of the attitude of Indians that a woman in child birth is unclean, and she concludes her thesis in these words

"A sidelight will be found by a glance down the advertisement space of Indian owned newspapers. Magical drugs and mechanical contrivances whether for princes and rich men only, or the humblest and not less familiar 33 Pillars of Strength to prop up your decaying body for One Rupee only crowd the columns and support the facts.

Facts so terrible as child marriage and purdah, which strike at the very roots of human development, cannot exist for a day amongst a people who pretend to any form of culture. Until they as well as untouchability and enforced widowhood, are wiped out, I, for one, refuse to regard India as a land deserving the name of culture or civilization. Those customs have absolutely no justification in human society, and they reveal degeneracy and spiritual disease of the lowest order. Those Indians who are insensitive to them show that they have degenerated to the lowest scale of human culture, to that of the purely physical the purely sexual.

A section of Miss Mayo's book is devoted to social evils and their effects which we admit in general terms, but not in every detail, as we admitted them long before she ever went to India. But when she touches politics and economics,—then we part company with her, and even doubt her honesty of

purpose in writing the section on social evils. It looks as if she has exploited India's social evils merely for political propaganda on behalf of British rule in India. Therefore, the last part of her book, as well as the little drops of political poison interlarded throughout the pages of the first part, is absolutely untrustworthy. That social evils exist in India is no justification for British rule. We admit the social evils, but our solution of the problem is different from hers. Our solution is this: the doors of India's life to be opened to world currents—which means the immediate end of British rule that the land may be swept clean of the social evils which are bred under the present system.

That Miss Mayo has produced a propaganda book on behalf of British rule is beyond a shadow of a doubt. She speaks of the leaders in the national movement as talkers. She quotes Gandhi, Tagore, Lajpat Rai, or other Indians only when she can find something in their speeches to justify her thesis and to help her paint a picture against India. Then she stops. What these men are doing to fight India's social and other evils what the national movement is doing—she either ignores completely, or she belittles. Take untouchability, for instance, which she condemns. We all condemn it. Gandhi is the outstanding enemy of it and with a pen like a sword writes against it travelling and organizing to abolish it. Not a word from her, of this however, nor of what work other men and women did before Gandhi and have been doing even now to destroy this evil. But when the Prince of Wales went to India and was boycotted until even the cats stayed at home, she descends to the cheapest American sob stuff. She has the unmitigated audacity to publish English gossip that when this representative of British imperialism went to India to try and crush the national movement, the untouchables threw themselves before his carriage and tried to touch him crying, 'Our Prince our Prince—we want to see our Prince.' In other words, one would think that the Prince of Wales had devoted his life to working amongst the untouchables. But apart from this fact, the story is an absolute lie and is one of the concoctions of Englishmen in India to hide their chagrin about the boycott of the Prince of Wales. If pariahs in Bombay really did what she said, we may know that they were paid an anna a day to

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc. in the original contributions and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject this section is not meant for the airing of such differences of opinion. As owing to the kindness of our numerous contributors we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words—Editor, The Modern Review.]

Should Modern Christianity abandon Miracles?

Under the caption 'Why Modern Christianity is abandoning miracles' Mr. J. T. Sunderland has written a very interesting and thought-provoking article in the May number of the Modern Review. In it he presents seven difficulties which confront the modern scientific man when he tries to believe in miracles. The difficulties he adduces are both scientific and moral and though they are stated simply as difficulties yet when one comes to the end of the article he has produced in him the impression that the difficulties are insuperable. The objections raised against miracles are the following:

1. If miracles have ever happened in Bible times or any other way do they not happen today?

2. Why do they not flourish as much in light as in darkness in ages of intelligence and science as in ages of credulity and among the intelligent as among the ignorant?

3. Persons who contend most stoutly for their own miracles usually deny most vehemently the truth of all miracles outside their own.

4. The moment we have accepted any of them there seems to be absolutely no place to stop; we have got to accept each and every miracle recorded in the Bible.

5. To admit miracles is to degrade the character of God. It makes him changeable and arbitrary.

6. It is impossible to reconcile the idea of miracle with belief in the goodness of God.

7. A serious difficulty in the way of believing in miracles is the famous objection of Hume that miracles are a contradiction of human experience.

My purpose in writing this short article is to point out that modern Christianity in order to be in line with the conclusions of modern science need not abandon the age-long theological concept of miracle. This does not of course mean that the modern scientific man accepts the category of miracle in the same sense in which it was believed hundreds of years ago. The concept has certainly suffered great changes in its connotation in the course of theological controversy but I feel sure that it is both scientifically unwarranted and philosophically unsound to regard it as a thought-form that is outworn. To be sure one can see in the present day thought, a very strong tendency to reject the miraculous or the supernatural

and very often it is done on the flimsiest grounds. Even such a renowned author as Doctor Huxley in his latest book, 'The modern use of the Bible' after giving a very instructive account of the evolution of the meaning of the word miracle from very early times to the present day dismisses it with scant courtesy as a concept which is superfluous to modern religious thought. One would have expected from such a great leader of modern religious thinking a more patient and thoroughgoing discussion of a concept which has held sway in some form or other in theological circles for hundreds of years.

One of the arguments that is advanced very frequently and with almost a certain sense of victory is that miracles are an understandable contravention or inconsistent breaks in an otherwise harmonious system of nature. The uniformity of nature is said to be a conception which is a recent discovery of modern science, and since this conception means that everything in the universe is subject to inviolable laws it obviously excludes the possibility of miracles in the sense of interferences or breaks in the established order. God is said to be a God of order and not of disorder which he would certainly be if he allowed miracles to happen in the world.

The argument has very great plausibility and seems to fatally close the case against miracles so long as one does not stop to enquire into the real meaning of the word miracle. But when one questions the meaning given to the word miracle here, the hollowness of the argument becomes transparent. By a miracle one does not mean (at least in the present day) an event that is contradictory to the laws of science. If one meant that, then perhaps the argument that admission of such miracles would mean making God to behave in a self-contradictory way and disorderly way would have a great weight. But nobody believes in miracle in the present day in the sense of interferences with nature. By miracle it should be understood an event that does not at all contradict known laws of science, but only transcends known laws of science. It is an event which certainly refuses to be explained with reference to any one or a combination of the already discovered laws of science but this refusal to be resolved into known laws is not tantamount to a violation of the known laws. Possibly in course of time as science advances what is now unanalysable and inexplicable may

become resolved into its various laws and under stood as every other ordinary event is understood.

If once miracle is defined in the above sense as an event that is impossible of present scientific explanation but quite capable of a future scientific analysis, it becomes quite clear that there can be no objection to a belief in it from the side of science. What science cannot tolerate is not the occurrence of an event that is a present mystery but only that given same conditions different results should not happen. Very often the Uniformity of Nature is understood to mean that the present order of things will continue to be what it is eternally. This is a fundamental misunderstanding of the postulate of Inductive science. All that the law of uniformity means is that nature behaves in a uniform way that if an event occurs in the universe it must be because it has been produced by some cause or other or in other words that in the occurrence of events there is no possibility of what is called chance in the sense of uncaused effect. As it is usually expressed every effect has a cause and the same cause has the same effect. This does not exclude the possibility of an event occurring whose cause we do not know or cannot understand at the present time. It cannot say that nothing new or different to what has occurred in the past can ever occur in the present or future for the simple reason that science is always advancing and can never claim *at any one particular stage to have comprehended all thought and knowledge*.

Now it is in the above sense of the word miracle that Mr Sunderland criticises it and as such it commits a fatal fallacy.

There is also another statement in Mr Sunderland's article to which I would like to take exception and that is when he says in page 216 when it is understood that God works everywhere according to law miracles disappear—there is no longer any place for them. In this sentence the author expresses in so many words that God's working in this universe is according to laws. But I wonder if this is a true representation. It seems to me on the other hand that God's way of acting far from being according to abstract general laws in which things are taken in classes is according to individual needs and particular peculiarities. Law is essentially abstract it is that which is arrived at after the examination of a number of instances supposed to resemble in essentials and to differ in accidentals. But this division of qualities into essentials and unessentials is an entirely arbitrary division. Ultimately there is no such thing as classes in the universe. They exist only as our thoughts activity on the infinite variety of things that we see. God's creative activity is never so poverty-stricken as to reveal itself in the production monotonously of same things.

Again when we observe human experience we find how in our behavior towards others the strict adherence to laws is often inadequate and lands us in inextricable difficulties. The laws only tell us what we should do in a uniform way repeatedly under similar circumstances. They never tell us as to how we should behave under particular concrete circumstances. Hence it is because of this inherent inadequacy of laws to dictate to us definite details of action under particular and complex circumstances that we

are often advised to act according to principles and according to the needs of the particular situation before us. If such is the case with man that is if even with us to act according to strict and invariable abstract laws is a defect rather than merit how much more should it be with God?

Besides scientists themselves do not regard the laws they have discovered with reference to the things of this world as having anything more than a provisional validity. No scientist ever thinks of claiming an absolute validity for the scientific laws because there is always the possibility of the conclusions now accepted being revised and enlarged with the accumulation of new data. It what has been said above in this paragraph is true how can we say that God acts everywhere according to law? If I understand Mr Sunderland right it is because he is anxious to think of God as one who governs the universe in a uniform and systematic way that he wants to regard him as working everywhere according to law. But I wonder whether if he realised that in the meaning of the word law there is an essential element of impermanence and provisionality he would still continue to make that statement.

There is just one more point which I would like to make before closing this very brief and random criticism of the article. It does not pertain to any one of the difficulties that is raised by the author. But it is *supra question* as to what place would be assigned to prayer and faith on a view of the supernatural or miraculous as is depicted by Mr Sunderland? It seems to me that if one is to be consistent with the conclusion arrived at in that paper, he has perforce to deny that prayer has anything more than a merely subjective effect. The prayer of a faithful man cannot achieve things that are impossible to the ordinary individual. Prayer will be a foolish farce if it were not regarded as the condition of producing effects that are contradictory to ordinary human experience.

I am sorry I have not been able to deal with the article at greater length or in more particular detail. But my main purpose was simply to point out from a criticism of one of the fundamental arguments advanced against belief in miracles namely that which is founded on the orderliness or the Uniformity of Nature that Modern Christianity in order to be modern and in order to be in line with science need not give up its belief in miracles in the sense of events that transcend known laws of science.

DAVID G. MOSES

Late Mr 'Khare

Mr T. M. Bhat M.A. sends us the following corrections in the article relating to Mr Khare published in the Modern Review for July—

P. 60. The young husband of 14. — Though the late Mr Khare was married at that age he did not go to Satara immediately after his marriage. He passed 2 to 3 years again aimlessly at Gubhazar.

P. 63, Column 2. He migrated to Poona. He did not go to Poona in search of service. He got it and then went to Poona and at first served in an English School for about a year.

do it Gandhi, whose word is honoured by the untouchables, was one of the leaders in the boycott movement. It is strange that this American writer can condemn the ignorant Hindus who crawl before the idol of Kali in Calcutti while on the other hand, she resorts to the cheapest stage tricks to praise the few untouchables who are said to have crawled before the Prince of Wales. What is it that makes crawling condemnable in the former case but commendable in the latter? No compromise is suggested between the Prince of Wales as an individual and Kali as a goddess. But if Kali be taken to be merely a goddess of destruction belied to whom is dying away political and economic imperialism, which the Prince was brought out to save is a living force which destroys the freedom, prosperity and manhood of its victims.

One could, of course, take up literally hundreds of details like this and prove them false. She has drawn false and ignorant conclusions from both social and political facts. But in a problem so vast as that of India we must take a broader and a more fundamental view. I, the writer see the problem from the following economic view point.

Up to two centuries ago, India was the richest and most prosperous land on earth, with a culture and civilization in advance of anything that existed in England or in most of the European countries. Two centuries have passed. Today, in the year of our Lord 1927 India is the poorest land on earth, the pest house of the world so far as ignorance, poverty, and disease is concerned. What has happened in those two centuries? The thing that has happened is that England has put her hand on India—and the touch has been deadly. England, the poorest land on earth two centuries ago is today the richest and most powerful, the center of the British Empire. England was built, not only upon the slave-trade from Africa, but upon the plunder of India, and it was India's plundered wealth that gave the capital for the development of machinery that, in other words, caused the industrial revolution. England's culture and prosperity is rooted in the slavery of generations of Indians.

When the British, taking advantage of the period of chaos and reconstruction in India—similar to that in most European countries of the same period—conquered India by one war after another, and won, they laid down

a fundamental principle of rule. They said that 'all' they wanted was to hold economic and political power, and that they would not interfere in the social or religious life of the people. The Indians, being naive or ignorant people,—or both,—accepted this situation. The policy was a most cunning one. For the fundamental law of life is the economic law and upon economic conditions social and religious customs rest. Social and religious customs are indeed but by-products of an existing economic order. India is no exception to this law which has ruled all lands from the beginning of time.

India, living as it has for two centuries under slave economic condition has intensified and perpetuated slave social and religious conditions. Ignorant to the depths of animality, poor to the extent that Europeans cannot imagine, its social evils sink their roots deeper and deeper into the soil which helps nourish them. Permitted to develop economically only in so far as English capitalism (now co-operating with Indian capitalism) finds it profitable, is there any wonder that its social life is a stagnant pool and that each year shows a lowering of the average length of life, a higher death rate, a deeper nursery of the masses? Slavery produces slaves. Slavery nourishes all that Miss Mayo has written about in her book—ignorance, bigotry, cruelty, superstition passing for religion. But this is not a peculiarity of India alone. Were it possible for Japan, for instance, to conquer and establish its rule in America, to establish a tyranny such as that of British rule in India, to drain the country of its wealth, not for one generation, but for two centuries until even the memory of freedom was dead, to destroy its system of education and establish a few schools where Japanese would be the language of instruction to train clerks for Japanese rulers, to make laws whereby any man could be arrested and imprisoned for years without even a charge being brought against him, or without a shadow of a trial, to deny the light of education to the masses unless they paid for it themselves—and they had no money to pay, to cultivate the poppy and manufacture opium and establish opium shops throughout the land where opium could be sold for the adults and for babies in arms alike, in other words, were it possible for Japan to hold America on the same terms and conditions as England holds India—I would wager my life that in two centuries

America would be a stinking swamp of social evils and diseases worse than India is to-day

There is but one solution of these evils under which India groans *It is that England get off India's back*. Nothing more, nothing less. Practically nothing is possible until that is done. We can put a patch here and a patch there on a social sore, but we will not cure the *cause* of the disease. Today it is the vast system which is responsible for these diseases. And instead of the British helping in any way abolish them they act like a mill stone about the neck of the nation, preventing it from climbing upward. For every step upward the Indians are forced to take two backward. It is the British rulers of India who are far more reactionary in social matters than the Indians. They are not only social reactionaries themselves, but they use their old excuse of not 'interfering in the social customs or religion' of the people. The ending of the supremacy of the British and the servitude of the Indians in India is the first and fundamental essential of Indian progress. At the present time all Indians come up against this prison-wall of British rule, it matters not in what field of work it is, whether in education, or medicine, or social progress. It is like a prisoner who comes up against his prison-wall with every step he takes.

An Indian national Government—but not the abortion England is trying to force upon the country now—could solve all such social evils as Miss Mayo writes of in her book. An Indian dictator like Mustapha Kemal of Turkey, or a dictating party like the Communist Party of Russia could, within ten years, wipe out child marriage and many other social evils in India. Not only could they make such practices crimes punishable by death for any man or woman party in them, but they could by introducing an immediate universal free and compulsory

system of education, create a new mentality in which such evils could not exist. They could by opening up fields of activity for every Indian, settle the religious conflicts which have their roots in poverty and the miserable hunt for jobs. They could by opening India to every progressive thought, sweep away the ignorance upon which social evils thrive. Such a system requires brave men, but India has those men. It requires brave women, and India has them. India's diseases are many and deep. They cannot be dabbled with as they are being dabbled with today. The only future worth living for, fighting for and dying for, is a free India—and I mean a *really* independent India, not the thing that Englishman and Indian bootlickers wish to call free."

We to whom a free India—social, economic and political—is precious, we who hate with unabating hatred the social horrors that are eating at India's life today, hate with a no less unabating hatred the economic and political slavery which harbours and perpetuates these horrors, we do not say that Indians should wait for freedom until they think of wiping out their social evils. Up to this time the abolition of these social evils is chiefly an individual matter confined to educated men and women who should, in no way, be a party to any form of child-marriage, purdah, enforced widowhood or untouchability. Each educated Indian is duty bound to come to a dead halt in his own private life and refuse, it matters not what the consequences, to be a party in any way to these conditions. But on a *mass* scale these things cannot be abolished until India is free. They are problems with their roots in subjection—which produces in turn ignorance, disease, and superstition. To wipe out these things requires a new economic and social order.

Widows at Brindaban

With reference to a note under the heading *Widows at Brindaban* published in the Modern Review for July 1927 On page 87 written by one Miss Ingram I beg to request you on behalf of the Braya Mandal Seba Sangha, Brindaban to publish the following few lines in your widely circulated Review

This Sangha has taken up the cause of imparting true culture to the widows in general particularly those of Brindaban by doing Seba Work and trying its utmost to remove all the superstitions and prejudices which are detrimental to the growth of universal humanity The poor widows of Brindaban regularly assemble in numbers at Radheyshyam Bhajanashram Laxi Bazar and their necessities are supplied by the kind hearted proprietor of that Ashram but still some occasional friction would arise which were recently removed by this Sangha and through the help of some generous hearted gentry of Brindaban These widows come not only from Bengal but from other different parts of India also for which Bengal is not solely responsible The Sangha is suggesting to the Indian Nation to start such Ashrams throughout the whole country especially at villages, by some highly cultured Indian ladies who may promote the cause of womanhood and try to check ignorance and spread true culture among the widows

Outrages on Women in Bengal, and A Muslim Protest

In your August issue while commenting on the subject of outrages on Women in Bengal you have asserted that this is a well organized affair with brains and money behind it Such an assertion might well have been ignored had it come out from the pen of any other Editor of questionable dignity and with less reputation but coming as it does from your powerful pen, one can reasonably hold that you must have positive proof for your assertion As a layman with no editorial reputation to lose and claiming some knowledge of the affairs of the country I must say at once that Bengal has not yet gone so far to the dogs that any community thereof will be so utterly mean as to organize itself with brains and money for abduction and outrage of women of whatever creed or caste Unless and until you give the reasons which you may have ready for making such an assertion or any proof in support thereof the public or at least a large part of it is bound to regard it as an editorial aberration or slip of the pen

The rest of your comment is a thin veiled insinuation that Mahomedans are the main culprits in this nasty business. In fact, this is not the

first occasion when you have directed your attacks on that community With all respect for your old age no less than for your pre eminence as a journalist, may I humbly warn you that you are slowly but certainly sliding into an unholly communal bias? You do not understand why there are cases of Mahomedans abducting Mahomedan women when no question of conversion arises You also state that in case of Christians desiring the conversion of Hindus cases of abduction and rape etc are not usually heard of but in case of Mahomedans wanting to convert Hindus such cases are quite common I regret that these questions betray want of clear thinking on your part You Mr Editor will no doubt concede that all things in the world do not happen with a geometrical precision causing the same kind of results everywhere so that in a case of abduction—where the crime may have been perpetrated by a Christian the act may not create the same amount of fuss or give rise to the same degree of agitation as probably in a similar case where it may have been perpetrated by a Mahomedan particularly at a time when the whole atmosphere is surcharged with a spirit of antagonism between the two great communities It is not quite correct that Mahomedans abduct Hindu women often by way of conversion At least many of the cases of abduction are purely sexual crimes committed by human brutes for their gratification Sexual crimes in its grossest forms have existed in all countries and in all ages and you seem to forget this when you paint the Mahomedans rather a little too black Please do not think that I am in any way lending a laurier to either the crime or its perpetrators whoever they may be but I am really sick of seeing from day to day my community being often the target of unjust and unjustifiable attacks at the hands of publicists of the other community too numerous as they are If you have statistics to show on the one hand that the number of Mahomedan culprits abducting Hindu women are really large then it can also be proved on the other that a great deal of the modes and habits of life the treatment accorded to Hindu widows obtaining in the lower classes of Hindus generally of the mufassil easily rouse the cupidity of men and no wonder ruffians who really belong to no community bide their time In fact these modes and habits of life etc contribute largely to the creation of an atmosphere, so to speak where abduction and outrage become easy and possible You would say why even then there should be any abduction at all The only reply is that you cannot make a whole people moral

You often blame my community for their apathy towards this matter The charge is not justified for they condemn it as much as you do If they are not as much vociferous as the other community it is because they have reasons to believe that many of the cases where a Mahomedan man and a Hindu woman are involved, are not really cases of abduction and outrage but only trumpeted as such by the not often well guided activities of the Sabhas or Samithies which are now growing in the country like so many fungi My community have also reasons to believe that many cases of alleged abduction might have resulted in happy and peaceful conversions and marriages but for the vicarious attentions of such Sabhas

or Samites or a few local Hindu riots. You also seem to regret that the Mussalman community are not entitled to the over the position of Aryans or refugees. It may be true that the reason is not far to seek. You must remember that the real in this direction is almost nil for they can well afford to take into their fold any Hindu or aboriginal woman.

I hope you will show me the courtesy of publishing it in your journal as a reply to your comment.

Yours truly
A HAJEE

Editor's Note

We have read Mr Haque's letter carefully. After reading it we do not feel that we ought to alter or withdraw a single sentence or word of our note on the subject in the August number.

Some of our reasons for thinking that there are organizations with brains and money behind them for the abduction and kidnapping of girls are to be found in the first paragraph of the note itself. Mr Haque will observe that in the note we do not accuse any particular community—Hindu or Muhammadan, or both the organizers. In fact as far as our information goes both Hindus and Mussalmans are implicated in organized and supplying victims of commercialized vice. We suspect that organized attempts by some Muslims have gone on for a different ulterior purpose also, an increase in numbers. As for proofs of our allegations we may at once say that we are not in a position to publish the names of the organizers and other particulars even if we could obtain them from those who know. Mr Haque may remember that during last year's riots at the conference held at the British Indian Association Rooms, both Hindu and Mussalman leaders asserted and many newspapers also wrote that there were brains and money behind the riots. But we do not remember that Mr Haque or any other person called upon these leaders and newspapers to prove their assertions. Those who are inclined to regard our assertion as an editorial allegation or slip of the pen may please themselves.

Mr Haque says that the rest of our comment "is a thin veiled insinuation that Mahomedans are the main culprits in this nasty business." We should be sorry if what we wrote were really a thinly veiled insinuation. Let us therefore repeat what we have often written in *Arabian* and this Review. In the cases of outrage on women which are published in the papers among the offenders there are many Hindus more Mussalmans and a small number of Christians. In some cases Mussalman and Hindu accomplices commit the offences jointly and severally. This has all along been our general impression after reading the news of the outrages from day to day in the papers. To check this impression, we count the number of cases against persons belonging to different communities in the lists published in the *Sargiana* week after week. These lists are of cases which have occurred from the year 1923 B.S. In not a single list published up-to-date have we found the cases against Mahomedans smaller in number than the cases against persons of any other community.

These lists are prepared carefully and honestly. We do not know whether any human being is or can be as impartial and unbiased as God is. But this we know that the *Sargiana* has not sought to minimise or extenuate the guilt of any of our people because of his being a Hindu or to magnify the guilt of any offender because of his being a Mussalman. That paper has not been biased even upon the Hindu community than on the Muslim community. If any other paper which Mr Haque considers more careful and honest and impartial in this matter has taken the trouble to prepare and publish lists like those of the *Sargiana* he is at liberty to base his conclusions thereupon.

As for our slowly but certainly sliding into an unholy communal bias it would be fruitless to defend ourselves against such a charge. In fact, we are not competent to do so. We try to be unbiased—that is our only aim. We have been doing journalistic work for nearly forty years. During this period we have been occasionally told that we are anti-Hindu, anti-Christian and Muslim and British and even anti-Brahmin. After every such occasion we have felt that there was every possibility of there being some truth in the accusation, and have consequently intensified the process of self-examination. That is the only statement we can make. But we cannot honestly plead either guilty or not guilty.

Mr Haque says—You do not understand why there are a lot of Mahomedans abducting Mahomedan women, where no question of conversion arises. This sort of case and some of those which follow have been written probably because the writer has not read our note carefully. That is also the reason why he has said. It is not just to correct that Mahomedans abduct Hindu women often by way of conversion. At least many of the cases of abduction are truly sexual crimes committed by human brutes for their gratification. Now it is not our assertion that Hindu women are abducted by Mahomedans for conversion. What we wrote is—No one has tried to find out excuses for or to explain away the offences against women committed by Hindu and Christian brutes. In the case of Mussalman ruffians accused of such crimes, it has been sometimes asserted by some correctionists of theirs that the women run away from some of their own accord and conversion to Islam has also been sometimes pleaded as the motive. It is this latter statement of some Muslims which we discussed in our note. There may be a few cases of elopement, or of running away from home for embracing Islam but the evidence and conviction in the vast majority of cases show that they are cases of brutal outrage.

Mr Haque wants statistics. So far as we are aware, no statistics have been compiled except those to be found in the *Sargiana*, and we have already said what they show.

Mr Haque's reference to Hindu modes and habits of life and the Hindu treatment of widows, etc., confirms our observation in the August number that Mussalmans try to extenuate or find explanations for outrages against women committed by Muslims. We have never spared the Hindu community for whatever inhuman treatment of women it is guilty of nor have we ever adduced excuses for some of its modes and habits of life. But in our experience we have not yet come across a single Muslim

journalist, writer or speaker who has been as severe a critic of his community in the matter of outrages on women as we and many other non-Muslim and Hindu journalists and speakers have been severely critical of the Hindu community in this matter. If we are mistaken we are sorry for the mistake. Of course we do not either think or say that the whole Muslim community is to blame but its leaders, journalists and speakers have not in our opinion done their duty in the matter.

Mr Haque is at liberty to say as he has said. You cannot make a whole people moral. But all communities should aim at making all their members moral and make adequate efforts to gain that object. It is only in that way that a high moral level can be attained. We are not satisfied that any Indian community large or small is as moral as it ought to be.

We will not discuss Mr Haque's views on Sabhas and Samitis because in our opinion though all of them are not entirely unprejudiced Mr Haque is a biased critic. At least some

women's protection societies work in an unsectarian spirit.

As regards his remarks on asylums or refuges they are due to his not understanding what we meant when we wrote. There are non-Muhammadan organisations for rescuing and otherwise helping women who have been victimised. We shall be really glad to know that there are such Muhammadan organisations also. By such organisations we did not mean those which maintain asylums or refuges, we meant societies for finding out rescuing and making over to their relatives and guardians women who have been abducted etc. and for helping them to prosecute and bring to book those who have committed the crimes. We know the *Nari Raksha Samiti* of Calcutta of which Mr Krishna Kumar Mitra is the secretary, has helped many Hindu and some outraged Muslim women in this way. No Muslim organisation to our knowledge, exists for this purpose. What is the reason? It cannot be because Muslims condemn it (abduction etc.) as much as you (that is to say we) do, or because the Muslim community's need in this direction is almost nil."

DRAVIDIAN CIVILISATION

By R. D. BANERJI

I. INTRODUCTION

SINCE the discovery of the remnants of a civilization of the copper age in India, two serious problems have presented themselves to scholars (1) to what culture group does this civilisation belong and what are its special characteristics, and (2) what is Dravidian civilisation and what are its affinities?

There is a 'Negroid' strain among the Dravidians and that on the whole they still belong to a "very indeterminate group of varieties which range from the Dravidian and other 'dark white' stocks to the 'poor-whites' of the Near East and the Mediterranean."

Though the racial grouping of the Dravidians is still indeterminate, sufficient data have been discovered to indicate in very broad outlines their cultural affinities. The culture of the Dravidian people, in the southern provinces of India, is divided into

two distinct parts or complexes, the Pre-Aryan or the original Dravidian civilization and culture is widely different from the Post-Aryan or the so-called Hindu culture of the Southern and Central provinces of the Indian Peninsula.

The Indian Dravidian is denoted principally by his speech and the Dravidian languages in India are divided into three broad geographical groups, — (1) the Southern, consisting of Tamil, Kanarese and Malayalam, (2) the North Central, consisting of Telugu, Gondi and minor groups and (3) the North-Western, consisting of Brahui. The areas in which the first two groups are spoken are contiguous or adjoining but the third and the last group is spoken in Baluchistan only and that by a very small community. Ethnically the Brahmans, the ruling race or clan of Baluchistan, are quite different from the various people who speak Dravidian languages and dialects, in central and southern India. There are people of many different races among the latter. Beginning with the Oraon in the South-Western corner of Bengal and ending with the Tamils

speaking population of North Ceylon the Dravidian languages are spoken over a very

Monster burial Jar from Adittanallur
Tinnevely District

wide area. In order to trace the affinities of the ancient or original civilisation of the Dravidians, we shall have to begin with the remains discovered in Southern and Central India where Dravidian languages and dialects are spoken even now.

The remains in the country to the south of the Chilka lake along the Eastern Coast of the Peninsula and to the south of the *Bhima* and the *Krishna* along the western coast contain monuments of a kind all together new to other parts of India, such as the Ganges and the Indus valleys or the northern part of the watershed of the Narmada. These are tombs and cemeteries, family vaults of princes or of great cities. These tombs and vaults belong to many different varieties and the first classification possible among them is according to their contents —

I Tombs or coffins containing the entire body

II Receptacles containing a single bone

or a collection of bones of one individual, bleached but uncalcined

III Receptacles containing ashes or calcined bones. These three classes may again be divided into two general classes —

I Pre cremation burials and

II Post cremation burials

The methods of the disposal of the dead employed in districts of India where Dravidian languages are exclusively or partly spoken provide us with sufficient materials for the analysis of the culture of the Ancient Dravidians. In South India such tombs, vaults and cemeteries belong exclusively to the age of Iron. Iron implements, weapons and other objects are to be found in large numbers in the tombs, vaults, coffins and urns. But this Iron age is not far distant from the end of the Copper Age as along with Iron implements are to be found

Burial Urn with pointed end on ring stand
from Pallavaram Chinglepet District

beautiful vases, pots and other objects made of Bronze North of the Narmada exactly

similar burials are found associated with objects and implements of Copper and stone. In Northern and North central India such burials are to be found in two different areas — 1) Sindh and Baluchistan and (2) Chhota Nagpur.

Sindh and Baluchistan have come to be recognised as areas containing Dravidian burials only recently and similar burials also appear to have been discovered in south western Punjab. While Baluchistan was recognised as a Dravidian language area long ago and the first discoveries of burials of the south Indian types were made more

Indo Aryan dialect in India are considered to be such necessary adjuncts of the Sindhi language that they have been retained in the recently created Sindhi Perso Arabic alphabet used by the Amils and the Musalman inhabitants of Sindh. The only possible explanation for their occurrence or existence is their use in an area where once Dravidian languages or dialects were exclusively used. Similar characteristics are to be observed in other parts of India e.g. the southern Maratha country and Orissa whence Dravidian languages and dialects have been forced out by Vernaculars of Indo Aryan origin in recent times.

The first recorded burial of the new or Dravidian type was discovered in Sindh by Mr H. Consens of the Indian Archaeological department at Bhambrojo thul or the ruins of Brahmanabad in 1903-4 and 1908-9 but at that time it could not be recognised as burial of a new type. Similar discoveries were also made by Pandit Dayaram Sahni of the same department at Harappa in the Montgomery District of the Punjab in 1920-21.

In North Western India the first record of such burials are to be found in Dalton's account of the Mundas. * Since then more complete accounts have been published by Mr Sarat Chandra Roy of Ranchi. Mr Roy's account is in many cases based on hearsay evidence, but is on the whole reliable as affording instances of the South Indian type of burials in Northern India where some dialect of the Dravidian groups of language is still used. †

The burials of the new or the non Aryan type in southern India are generally ascribed by the local people to the heroes of the Mahabharata and tombs mounds or stone circles are called *Pandu kulis*, or the temples of the Pandavas. The general tendency throughout India is to ascribe all monuments of unknown origin to the Pandavas. Asoka pillars are called sticks of Bhimsen, forts of unknown origin are called 'fort of Bhim' in Central India. So the tradition of the locality is not a sure index of the origin of any ancient monument at any time except in exceptional cases. The general trend of races of Indo European speech was to dispose

Tripod burial urn from Berumbair
Chingleput Dist.

than half a century ago Sindh has come to be recognised as such only during the last few years. Sindhi the language of Sindh is an Indo Aryan dialect but it contains a number of additional consonants in its alphabet just as the south and central Indian groups of Dravidian languages do, e.g. their additional linguistic. This peculiar feature of the modern Sindhi alphabet is no accident. The additional consonants which are not required in writing any other

* Journal of the Asiatic Society of Bengal, 1873
Pl. II p. 112-19

† Journal of the Bihar and Orissa Research Society Vol. I p. 223-233

of their dead by cremation. In India the general practice of people who follow Hinduism is to burn the dead bodies completely or with the nearest approach to completion. Burial is practised by a limited class who cannot be regarded as though they are house holders orthodox Hindu. Who then were the people who practised burials in tombs, coffins, cists, urns etc. in the south of the Peninsula? Were they physically different from the people who now inhabit the same districts?

A number of skeletons in a comparatively perfect state of preservation enables us to answer firmly that in physical characteristics the people of Southern India who did not cremate their dead were the same as the present day inhabitants of the same country. It is certain that the people who speak Dravidian languages and dialects at the present day are not homogeneous. It was apparent also to the earlier writers and observers that the Dravidian languages are spoken by people of diverse races including some of the aborigines. A line drawn parallel to the course of the river Krishna from its source near Satara to its mouth with a northward extension at its eastern extremity would correspond to the northern boundary line of the area in which Dravidian languages are exclusively spoken. In the east Dravidian languages and dialects such as Gondi Oriso are spoken by the peoples of aboriginal extraction in the Central Provinces and Chhota Nagpur respectively. Further south pure Dravidian languages e.g. Tamil and Kanarese are spoken by a number of people who are evidently of aboriginal descent. The Iruas of the Nilgiris speak a mixture of Tamil and some other unknown language the korambans speak Tamil but their Hinduized brethren the kurabas use Kanarese. In the north the Yanadis of the island of Srinagarot in the Nellore District speak Telugu but all of them along with the Paniyans, and the Kadirs belong to a very dark flat nosed people who are ethnically related to the Veddahs of Ceylon, the Toolas of Celebes, the Batins of Sumatra and possibly the Australians. * The languages spoken by these people are impure Tamil, Telugu and Kanarese and they contain an element of one or more unknown languages which were very probably their mother tongue. In fact

the force and the extent of Dravidian culture was such as to compel the aboriginals within its zone of influence to adopt not only the language of the conquerors but also some of their manners customs and institutions.

The existence of these aboriginal people in the provinces where Dravidian languages and dialects are still spoken tend to prove that one particular people brought the Dravidian language with them when they came and settled in India. We do not know whence they came or what part of India was colonised by them first of all. We know only this much that Dravidian languages and dialects are exclusively spoken in the extreme south of the peninsula and in certain contiguous areas to the north of the lower course of the river Krishna.

Entrance to the stone cut Gajjalakonda
Karnul Dist

extending as far north east as the Rajmahal hills of eastern Bihar. In the far north west in the secluded barren valleys of Baluchistan a Dravidian dialect is still spoken by the Brahuis a people of Turko Iranian origin.

At the same time it has to be admitted that the languages of the basins of the Indus and the Ganges also belonged to the Dravidian group before their displacement by Indo European languages. The presence of the linguists in the Indo Aryas alphabet and a number of words of undoubted Dravidian origin in these languages also prove conclusively that the Aryans came into close contact with people of Dravidian speech as soon as they arrived in Afghanistan and the western Punjab. Though the Dravidian languages and dialects do not stretch in an unbroken line from the Punjab and Baluchistan to the

extreme south at the present day there are reasons to believe that at one time they prevailed over the whole of the sub continent, both in the north and the south.

There are two different theories about the Dravidian invasion or migration into India. One class of writers believe that the Dravidians migrated from India into Babylonia through Afghanistan and Beluchistan. The similarity of Dravidian and Sumerian ethnic types was recognised by H R Hall long before the discoveries at Mohenjodaro and Harappa. He is of opinion that it is by no means improbable that the Sumerians were an Indian race which passed certainly by land perhaps also by sea through Persia to the valley of the two Rivers. * The second

the Tinnevely District in the extreme south of the Indian Peninsula, through Sindh and Baluchistan the island of Bahrain in the Persian Gulf South Persia, Mesopotamia into Creta and some of the islands of the Eastern Mediterranean.

II DRAVIDIAN BURIAL CUSTOMS OF THE INDIA

The country which is now known as Dravida i.e. in which Tamil dialect is only a small part of the area in which languages and dialects of Dravidian origin are spoken. Let us take the burial customs of the province which is still understood to be Dravidian because in that part of the Madras presidency we find certain methods of disposal of the dead which are widely different from those of the Indo-Aryans.

Cremation or the burning of the dead body is very ancient custom which has prevailed in different parts of the world and among different races of people of the world at different times. At times and places it has given place to complete or partial interment while in other parts of the world it has replaced interment altogether. The general tendency of the peoples of Semitic and Hamitic origin e.g. the Egyptians was to bury their dead. After the adoption of Christianity essentially a religion of Semitic origin interment was generally adopted by all people of new faith irrespective of their origin. Cremation was an old custom in Europe. Most of the people who spoke Indo-Germanic languages practised entire or partial cremation.

The Indo Aryans generally practised complete cremation. Prof J L Myres says "Something must however be allowed here for the dispersal of the Tripolye people westwards over the middle basin of the Danube and for the prevalence of cremation among the Aryan speaking invaders of India and therefore probably among the other folk also on the northern grassland." * Rai Bahadur Rama Prasad Chanda has recently collected the Vedic and literary evidence about Indo-Aryan methods of the disposal of the dead in a monograph entitled "The Indus valley in the Vedic period." † This evidence goes on to show that full or partial cremation was the form enjoined for the disposal of

Sketch of the stone-circle and tomb at Gajalakonda Karnul District

theory is just the converse of this there is therefore nothing in the existing racial conditions and equally nothing in the existing physical conditions to prevent us from believing that the survival of a Dravidian language in Baluchistan must indicate that the Dravidians came into India through Baluchistan in prehistoric times. † The recent discoveries in Sindh and Baluchistan prove that the cultural affinities of the Dravidians extend in an unbroken line from

* Ancient History of the Near East 5th ed pp 173-4

† Prof E J Rapson in the Cambridge History of India Vol. I p 43

* Cambridge Ancient History, Vol. I p 111

† Memoirs of the Archaeological Survey of India No 31

the deadbody and there was the custom of collecting the bones of the dead and burying them in a mound sometime after the cremation. Let us take it for granted therefore that cremation partial or full is a pure Indo Aryan custom and all interments which show even traces of calcination of the bones or ashes must be regarded as belonging to the post cremation period and therefore anterior to the Aryan invasion or occupation of India.

In the districts of the Madras Presidency where the Tamil language and its dialects are exclusively spoken we find a method of disposal of the Dead which is foreign to the forms prescribed in the Indo Aryan textbooks. These burials fall into three separate classes —

I Complete interment in —

- (a) stone chambers (cots)
- (b) terra cotta coffins or chests (Larnakes)
- (c) or in large funeral jars.

II Incomplete burials or interment of some bones only without cremation in —

- (a) pyriform receptacles
- (b) pointed end urns and
- (c) flat or round bottomed

vases etc.

These burials are not to be found in isolated cases only but in great cemeteries and collections indicating without doubt that this was the generally adopted method of disposal of the dead of the ancient inhabitants of this part of the country. Skulls discovered in a comparatively perfect state of preservation enable anthropologists to state that these people, whose methods of disposing their deadbodies are so different from the present day custom were really the same people as the ancestors of the people who speak Dravidian languages at present not the untouchables or the real aboriginals such as the Kadar the Paniyan the Irula or the Kurni but of the great higher castes, not excluding the Brahmans.*

The generally accepted notion in European countries about the origin of Megalithic monuments is that they are Neolithic, but the

case is quite different in India, at least in Southern India. In many cases the Megalithic tombs or interments in the centre of stone circles have yielded well preserved implements of iron. Along with this fact we must consider the total absence of Copper implements in southern India. While in the North i.e. to the north of the Narmada and the Vindhya approximately the Chalcolithic culture slowly emerges out of the sub-neolithic phase in the south the Neolithic culture suddenly makes way for the early Iron age. This can be understood from a close study of the pre-cremation burials of

Four footed funeral Urn from unknown place in Coorg

the Tamil country proper with its natural extensions in the western edge of the Indian Peninsula and the lower portion of the Telugu speaking country. Let us begin with the latitude of Madras in the north. Large prehistoric cemeteries are known to exist in the District of Chingleput or Chaugalpeth and several of them have been excavated in this century while dolmens are known to exist near the Bay of Bengal on the Red Hills near Madras.

In the Chingleput district systematic exploration of the prehistoric necropolitan areas began late in the last century though they were well known to people who take any interest in them from the days of Fergusson. The earliest record of exploration in the Chingleput district is to be found in a detailed report by Mr. A. Rea. The site selected was a hill near the village of Trisulur close to the Cantonment of Pallavaram almost in the suburbs of Madras. Rea discovered a number of Jar burials at this site. These jars were large and pointed at one end and therefore incapable of stable

* The languages or dialects spoken by aboriginal tribes of Madras are a grotesque caricature of pure Dravidian tongues — J. Richards Monograph on so is Dravidian affinities and their sequel, p. 19

equilibrium Rea found that the funeral jars were covered with a lid whose form was almost exactly a replica of the tomb itself only of a slightly greater diameter so that it may be easily placed over and enclose the tomb proper. Rea found some bones in a very decayed condition in one of these jars but notes that they were uncalcined. The other important discovery on this occasion was that of one or more large oblong terracotta sarcophagi on numerous legs one at least of which was covered with great care to the Madras Museum. In 1883 prehistoric terminology, as yet indistinct. The funeral jars were called pyramidal tombs and the terracotta

Bath tub-shaped sarcophagus from Gajalakkudi
it was placed on a collection of iron stands

coffins earthenware tombs. The prototypes of such neopolitan furniture discovered in other countries of Asia have been aptly termed funeral jars to distinguish them from smaller jars which are called *urns* and *Larnakes*. A number of small earthenware vessels were found in both classes. The excavator observes. The remains at Pallavaram are evidently those of a burying people and not of those who first cremate and afterwards collect and place the burnt bones in the ground.

Numerous prehistoric remains were observed at the foot of a low range of hills in the southern part of the Chingleput district close to the village of Perumbair. There are stone circles the diameters of which vary from 8 to 50. In this necropolis the deposits are to be found at depths varying from 2 to 4 and consist of Larnakes of all shapes and sizes. They are 2 to 7 in length and generally resemble the Larnakes

found at Pallavaram, the only difference being that here almost all of the Larnakes are provided with three instead of two rows of legs. One Larnax only was found without any feet, a fact which ought to have aroused more attention even at that time. The excavator's description is extremely short, almost verging on incompleteness. Along with Larnakes some burial jars were also discovered but they were fewer in number. The number of Cromlechs and dolmens examined is not clearly stated and except in a few exceptional cases the reader is left to his imagination about the contents of the Larnakes.* In eight cromlechs situated near the village of Perumbair, Mr. Rea found polished, stone and iron implements and weapons, bones and shell ornaments. We do not know whether the bones appeared to be bleached or calcined. In cromlech No. 7 at this place Mr. Rea found a number of small jars and vases in the upper layer and a complete skeleton below it. The jars and vases are important. Some of them were oval in shape with three or four legs others were round like modern Indian pitchers while others were wide but shallow dishes. The position of the skeleton is more interesting. The legs were doubled up and drawn in front of the chest while the hands were crossed over the legs. Plainly the corpse must have been trussed up in this position before *rigor mortis* had set in. Inside cromlech No. 14 at Kadamalai, puttur near Perumbair a burial jar was found with a curiously shaped vase. It is elongated in shape tapering upwards with a narrow mouth at the top. But around the narrow mouth are grouped four smaller mouths or openings. The Larnakes of Perumbair are for the most part small indicating that the dead were reduced in size by being doubled up.

Numerous cromlechs and dolmens were discovered in the North and South Arcot districts. But systematic exploration for prehistoric antiquities does not appear to have been undertaken in these areas before 1916. The most interesting account of such discoveries is from the pen of the late Mr. M. J. Walhouse of the Madras Civil Service. Referring to the discovery of certain Larnakes by Mr. J. H. G. Rstin near the villages of Kollur and Devanur in the South Arcot district he made a number of extreme

* Annual Report of the Archaeological Survey of India 1908-09 Pt. II pp. 92-99

ly interesting and valuable observations in August 1876 Mr Garstin had found a number of polypoda Larnakes in the South Arcot district* in one at least of which he

Two terracotta Larnakes covered with a single stone, Gajalakonda Karnul Dist

found a number of iron implements and weapons and some bones. Mr Walhouse gave a number of interesting parallels and referred to the discovery of a similar Larnax at Panduvaram Dewal in the North Arcot District in 1852 by a certain Captain Newbold.

In January 1916 Mr F J Richards (Retd) excavated three stone cists at Odngattur in the North Arcot District in which he found large and small pottery, iron weapons and implements and fragments of human bones. Among the pottery were a number of tripod and fourlegged urns.

Further south, in the maritime districts of Madura and Tinnevely, prehistoric necropolis remains were discovered in large numbers. In 1888 Rea described a burial jar at Dadampatti in the Madura district covered with a large stone which contained bones and miniature necropolis pottery and referred to a similar discovery by a certain Mr Turner at Paravai in the same district. There is a large prehistoric cemetery at Paravai, which was partly excavated by Rea. He found that the cemetery was full of jar burials. In one jar, at least he found a skull and a large quantity of human bones in another, along with miniature or small pottery. At Anapanadi on the outskirts of Madura, there is another of

these large cemeteries. In one large jar Rea found a human skull and the complete outline of the skeleton*.

The most important discovery at this place was the finding of a skull and a number of bones in a semiglobular vessel. The discoveries in the Tinnevely district are the richest. In 1876 Bishop R. Caldwell wrote an interesting account of certain discoveries made by him at Kayal or Kail at the mouth of the Tamraparni river in the Athenaeum for the 12th August. On the outskirts of Kayal in the bed of an old tank Dr Caldwell discovered a monster burial jar, eleven feet in circumference which contained the bones of a man with a perfect skull†. Writing to the Indian Antiquary in 1877 Dr Caldwell records the discovery at Ilanj near Kartalum of a skull and the outline of a complete skeleton inside one of these monster jars§.

The complete skeleton from the Jar at Perumbar Chingleput Dist

Epoch making discoveries were made by Mr A. Rea in the excavation of the vast prehistoric cemetery at Adittanallur in the Tinnevely district close to the mouth of the Tamraparni river. In some of these mounds regular pits were excavated in beds of loose quartz in rows and very large funeral jars were placed in them. The objects yielded by these burial sites, are finely made pottery of various kinds in great number, many iron implements and weapons, vessels and personal ornaments in bronze, a few gold ornaments, a few stone beads, bones, and some household

§ Ibid. p 279

stone implements used for grinding corry or sandalwood pieces of cloth and wood preserved by rust or oxidation in contact with metals are found *

The prehistoric cemetery at Adittanallur consisted entirely of jar burials. All of these jars are pointed at the bottom and therefore incapable of stable equilibrium. Some only of the jar contained complete skeletons. Generally only a skeleton of the bones of a skeleton were interred. The position of the bones in cases of complete inhumation showed that the body had been set inside in a squatting or sitting position none of the bones were calcined †

An oblong sarcophagus from Chingleput Dist.

The examination of these cemeteries in the Tinnevely district prove that —

- I. they belong to the Iron age
- II. that the use of Copper for the manufacture of weapons had become obsolete
- III. that they were not the burial places of any primitive or aboriginal tribes but contained the mortal remains of a highly civilised and cultured people who possessed a distinctively developed artistic instinct
- IV. that they contained the graves of all classes of people from the highest nobles who used golden diadems to the poor commoner and

V. that the people who used such burial customs were a dolichocephalic race but were not possessed of platyrrhine noses

Such remains are by no means uncommon in the inland districts of Salem and Coimbatore

In 1876 the Rev Maurice Phillips, wrote an account in which he referred to Cromlechs which contained small urns, iron implements and small pieces of bones, cists in which were found large jars containing iron implements and ornaments and small terra cotta pots with large human bones but the position of the bones indicated that the complete body of the deceased was interred. The three legged jars were all well known in this district to Walhouse even in 1876

On the western coast of the Peninsula stone cists and burial jars are equally well known. Bishop Caldwell referred to the existence of huge jar burials in the Malabar coast from the southern extremity of Travancore to the northernmost limit of the Malabar district. As early as 1819 Dr J. Oldham then President of the Asiatic Society of Bengal compared the stone cists of Malabar with the cists and dolmens of Coorg and Mysore. In 1876 Mr Walhouse referred to some dolmens called Topekals, at Chalaparambal on the Beypur river seven miles from Calicut. In 1910 Mr Rea described some pre-historic remains at Kaniyampundi near Maogalam railway station in the Coimbatore district. Here the burials were placed at the centre of stone circles and consisted of the jar type. In 1911 Mr A. H. Longhurst, Mr Rea's successor visited a rock cut tomb in the same district in which were found a number of smaller urns of two types — (the flat bottomed (b) and the type with four legs so common all over Southern India. They contained red earth ashes and minute fragments of bones

We have now exhausted the Tamil speaking districts. We shall now see that such burial customs were not confined to the Tamil speaking districts but extended northwards on both sides into the Telugu speaking districts in the centre of the Peninsula and the eastern coast as well as the Canarese districts of Mysore and Coorg. The earliest known discoveries in the Telugu speaking districts or the Andhra country were recorded in 1872 in the first volume of the Indian Antiquary. In the remains in the Palnad adjoining the Eastern Ghats near Kurunpudi Mr Boswell like all earlier writers of the type of Fergusson paid more attention to construction and structural remains than to the cultural side of his discoveries

The credit of the earliest systematic exploration of prehistoric cemeteries in the

* A. n. al Report of the Archaeological Survey of India 1902-3 p. 117

† Ibid p. 119

Telugu speaking country belongs to contemporary scholars Messrs A H Longhurst and Ghulam Yazdani. Mr Longhurst's account of the excavations at Gajjalakonda shows that about two miles from the Railway Station there is a large prehistoric cemetery in an open plain. Originally most of the tombs in this cemetery were enclosed within stone circles and in the centre there were stone cists covered with cairns of boulders. The cists were rectangular chambers of rudely dressed slabs. One of the large tombs opened by Mr Longhurst at this place contained two layers of burials. In the lower layer were four different tombs the contents of which were crushed by the superincumbent weight. Only fragments of bone and pottery were found. In the upper layer there were six different tombs with dressed stone partitions between each containing bones and pottery. No skulls or pelvis bones and jewellery beads or iron weapons and implements were found. The age of these tombs can be determined from the dressing of the slabs for which iron tools must have been used. The excavator observes that none of the bones appeared calcined but rather that they had been dried and bleached in the sun before being put into the tomb.

Another tomb opened at the same place was more interesting. The excavator found a bath tub shaped Larnax containing large human bones. There was no cover to the Larnax and it had no legs as are to be found in the majority of the Larnakes from Perumbair and other places. It was supported on ring shaped stands which were quite separate. Under a small cairn Mr Longhurst found two polypode terra cotta sarcophagi with lids covered together by a large slab of stone. "Mr Longhurst observes about these burials at Gajjalakonda that 'The nature of the pottery and the construction of the tombs show that they were a highly civilised race of people and no mere wandering jungle tribe'.

Mr Ghulam Yazdani's discoveries were made at Maula Ali and Raigir in the Nalgonda district. At Raigir he opened a stone cist which contained three skulls placed on sides of a large pottery jar.

In 1853 Meadows Taylor also found complete skeletons or interment of selections of bones with ashes along with pottery in tombs in the Shorapur district of the Nizam's dominions. In 1877 Mr William King described certain cist burials in the northern part of the Nizam's dominions. In Mysore and Coorg the search for prehistoric antiquities specially necropolises remains have never been thorough. Cist graves exist at Konur and Aihole in the Badami Taluka of the Bijapur District. A stone cist containing bones and pottery was found at Gokak near the well known falls in the Belgaum district. In 1875 Captain R. Cole found cists at Margal near Bowringpet which contained fragments of bones and iron objects. In the same year Captain J S F Mackenzie found a stone arrow

Collection of Necropolitan pottery and other furniture found above the skeleton in No. 1 at Perumbair

or spear head iron implements and weapons bones and a brittle substance like charcoal at Fraserpet on the Haveri. The most important discoveries were made by Colonel B R Branhill in the Savandurg cemetery 22 miles west of Bangalore. There were found charred bones in one with a piece of flat copper jars near the pavement slab of one cist with minute pieces of charcoal husks of grain and small pieces of bones in a second and in another a complete skeleton. Plain indications of a human skeleton having been buried lying on its right side along the south side of the chamber with

the head to the east, and looking towards the north. The figure must have been in a bent posture *

Branfill also described certain Larnakes discovered in cists at Aneguttahalle near Tekkai on the Madras-Bangalore section of the M & S M railway, precisely of the same kind discovered in Chingleput Arcot, Karnul and other districts of the Tamil country.

To the west of Mysore prehistoric cemeteries are to be found in Coorg. Those on the Maribetta hill are of a different type. Here the roofs of the cists are arched being constructed of two or more slabs resting against each other. In these cists were discovered funerary urns with three or four legs and a number of *miniature pottery*. Similar urns and remains were discovered at other places of Coorg and some of the funerary urns still exist unopened in the

Indian Museum at Calcutta. Nothing is known about their find spot.

To summarize, Southern India, to the country to the south of the Vindhya and the river Narmada shows the wide spread existence of a Non Aryan burial custom in which the body was not burnt even partly, the body was buried either in full in stone cists. Only in one or two very rare instances do we hear of stone implements such as flint scrapers or knives or arrow heads being found in these tombs but in no case copper or bronze weapons have been discovered. Copper or bronze is used in certain cases as ornaments or art ware e.g. the vases and plates found at Adittavallur. In the majority of cases iron implements and weapons are found inside the coffins or jars or outside them but inside the tomb.

GLEANINGS

Glances Of Modern Russia

Muriel Paget an Englishwoman who saw Russia during war and revolution revisited Moscow and

Peasants at market in Moscow

Leningrad ten years later and tells of everyday life as it is lived there today.

Arriving in Moscow I noticed a great change for the better in the general appearance of the streets since my last visit. The houses had been repaired and painted. People looked fairly well nourished. Food I found was plentiful and not expensive and the Russian people have always eaten less than we do in America and England. The majority of the people were hurrying along as if intent on business. They were dressed neither very well nor very badly, their clothes being either remnants of old days or made of material manufactured in the country. Imported clothes are rare because they cost so much—Russia has imposed a heavy tariff on imports except raw material and machinery because she has not sufficient exports to justify further imports. As a result an overcoat imported from abroad costs about \$100—a doctor's salary for two months.

The streets of Leningrad gave me a different impression—and a sharper emotion for Leningrad had been the center of our hospital activities during the war and revolution and the place was full of memories. The brilliant court and diplomatic life of the city I had known was dead.

Leningrad seemed to me tragic because it had fallen from a high to a very low estate—from the sparkle and gaiety of a royal capital to a threadbare city without even the dignity of the present governmental activities, since Moscow is the capital.

Both in Moscow and in Leningrad I interviewed

officials of the Ministries of health and Education I visited hospitals, schools, infant welfare centers.

From Moscow River one may look back at the ancient Kremlin at golden domes catch the sun and grim walls in whose shadows so many have died.

A view of the Cathedral of Christ Our Saviour, Moscow's largest church.

and other institutions. One of the most acute problems for such agencies in Russia is that of the

(Ewing Galloway)—Leads of the present Russian Government dream of the time when radio and electricity will reach even such isolated peasant farms as this one high in the mountains of the Caucasus.

wild children." At one time as a result of war famine and revolution there were as many as two million homeless orphans wandering about the country. They lived during the summer in the towns and when the cold weather came migrated south like the birds. Today it is estimated that there are still about 300,000 and that about 80,000 of these were in Moscow last autumn. Institutions are absorbing them by degrees but they are still a tremendous problem. Securing suitable people to handle them is as urgent as the building of homes for it takes great tact and patience and a knowledge of psycho-therapeutics to tempt these children back to ordinary civilized life after they have led the wild life of the streets.

Most of these professionally homeless children have spent one to seven years of wild life. They seek shelter at the stations in old asphalt boilers and sleep on doorsteps or in refuse boxes. For the most part they steal their food and drugs.

Perhaps ten per cent of them drink and take cocaine. Having snuffed cocaine you become more brave, you are no more hungry, you feel so happy—so one of them explained the habit. Imagine hundreds of children cold and hungry, craving love and care, finding their happiness only through a sniff of powder unconscious of the inevitable coming horrors of despondency and hallucination. The Ministry of Health is trying to treat these tragic narcotic children but the lack of funds is hampering in one home I saw twenty six narcotic boys in charge of a woman doctor—boys small for their age but very intelligent and keen their wits sharpened by necessity.

Another woman doctor a very remarkable one sits at the head of the section that deals with the health of mother and child up to the age of six.

(Fring Galovay)—Be a of the stern old Fortress of St. Peter and St. Paul now clang out the International instead of the old national anthem of earlier days. The slender gold spire of Peter Paul Cathedral rises over the church where most of the Romanoffs were buried.

She is responsible for a very complete and admirable permanent exhibit illustrative of the health of women and children. Several large rooms are devoted to this purpose and here are educational posters painted by the best artists together with medical surgical and dietetic exhibits. Wax figures portray with almost horrible reality every form of childish skin disease and statistics of every description are graphically displayed. Thousands of people visit the exhibition.

The housing problem in Russia is acute especially in Moscow, where there has been a population increase of forty per cent since the war and a twenty per cent decrease in housing accommodation.

Radio is a new factor which is bound to improve Russian life. By this means it is possible to transmit information, amusement, music and education without the medium of reading or writing—pleasures and interests formerly unknown have been brought into the lonely lives of people living miles from civilized centers.

Russia holds great promise for the peasants in the shape of development of the Co-operatives—a movement not new of course.

I gathered that the present strength of the Co-operative movement is eleven million members and that about twenty five per cent of the peasant population are associated with the movement. Membership is limited to voters in the towns and to agricultural workers in the country. In the towns sixty per cent of the members are Communists and in the rural districts only nineteen per cent. Administrative posts are barred to the clergy and the well to do classes—the employers of hired labor. Eighty per cent of the sales of sugar and salt and seventy per cent of textiles are effected through Co-operative societies. In the grain trade during 1926 out of twenty five million pounds the Co-operatives handled over one-third of the amount.

The present organization is in part political having the aim of developing Socialism and annihilating private trade. It also carries on educational work by special schools and courses. These are attended by nearly 10,000 students.

Education under the present regime is a subject of great interest. After the Bolshevik revolution everybody had access to the universities and technical high schools.

All orthodox forms of teaching were rejected and new and fancy methods were tried.

I was much impressed by the intense and universal desire of all young people to acquire general information.

Communists of course are implacable foes of religion but religious tolerance is theoretically practised.

I share the belief of many others who know something of the Russian temperament that the Bolshevik movement in Russia in spite of all its brutalities and the appalling destruction which it has brought to Russia itself is developing not only as a new system of government but as a new religion. It seems to me a sort of blind and blundering attempt to escape from old injustices and to set up new ideals—not only for Russia but for the world at large.

Undoubtedly there is much more discipline now than in the first years of the Revolution. By

degrees order has been restored and such independence is no longer tolerated

The World's Citizen

Pinkie

We reproduce here a painting on the canvas which is known as "Pinkie." It is by the famous British artist Sir Thomas Lawrence and was sold in a London auction room on November 2 for 14,000 guineas or about \$37,000 said to be the highest price to be paid at an auction anywhere in the world. The fortunate possessor is likely to be an American since the purchaser, the Messrs

Pinkie—By Sir Thomas Lawrence

Duveen have announced that the picture will come to America sometime in the spring. Another interesting fact in connection with the canvas is that the young lady here painted was Mary Moulton Barrett who in later life was the aunt of Elizabeth Barrett Browning.

New System of Education

A geography class in the Alabama school has been studying Hawaii and graphically illustrates the native costume

Marietta Johnson is pioneer prophet and demonstration center for the people who believe that "education is identical with growth" and who are sure that developing the latent abilities of a child is better for him than stuffing him with extraneous information.

Marietta John is a vivid visionary a warmly lovable prophet of a cause. She speaks of things dreamed of afar and brought near for the glory of your children and as you listen you catch fire from that glowing voice and burn with the desire to make these dreams come true. Her face is motile warmed with charm and humor and lit with an all embracing love of humanity.

Fairhope Alabama, is the bubbling experiment station where youngsters from six to twenty years old demonstrate various stages of growth under Mrs. Johnson's theories. The Edgewood School at Greenwich Connecticut is probably the

difficult to manage. Books she would ban until children are eight years old. And so skilfully is her program planned that the children are busy with concrete things up to the point where they feel the imperative need for the knowledge that is in a book.

Religious instruction in the schools is prohibited.

The whole undertaking is an interesting example of intelligent co-operative effort among parents in a small suburban community in an attempt to solve the ever discussed problem of schooling.

For many years it has been the American tradition and not always an applauded one that the teaching of children should be in the hands of women. Mrs. Johnson transcends the tradition making schools instead of just teaching them. And the schools she makes with their emphasis on healthy growth instead of on book learning, are active as a leaven in the over heavy mass of the established system forcing up bubbles here and there which let in light and air to old ideals and old methods.

The Woman Citizen

Mrs. Marietta Johnson who believes that "education is identical with growth"

best known of her Northern schools and the Manhasset Bay school at Port Washington. Long Island is her youngest fledgling. A dozen other private schools from Cape Cod to the Golden Gate bear witness to her inspiration and her unflinching enthusiasm and public school officials in the most enlightened cities are experimenting with her methods and trying to adapt them to the larger groups of children they must handle.

Little children are provided with projects that keep their small bodies in healthy action let them move around freely and do not demand too fine co-ordination or too long concentration. Games and folk dancing supplement carpentry and needlework and nature study and develop good physiques and muscular control as well as stimulating and feeding that natural curiosity which is the thing that makes education possible and so

Sun Spots

Mussolini Paints His Own Portrait

Mussolini the Great Leader of modern Italy has made in the last four or five years a vast number of spirited and eloquent speeches. From these we have culled a few characteristic phrases that reveal the Duce to us in his own words. In reading these speeches one is both struck by his evident sincerity and amazed at his acute understanding of mass psychology. His skill in manipulating the word of power beloved of the ancients is remarkable. He has constructed what amounts to a ritual for the close of many of his speeches specially to his beloved Black Shirts.

We control the nation not in order to enslave it, but to serve it, with humility, with absolute devotion and with a sense of duty that I would describe as religious.

Violence for us is not sport. It is not nor can it ever become a diversion. For us violence is like war the hard necessity of certain fated and historic hours.

Violence is not immoral. On the contrary it is sometimes moral.

Fascism is a phenomenon that interests the entire world which has discussed it eagerly ever since its inception. A literature regarding it has grown up in all languages. Men have come from Japan, China and Australia to study it. Evidently they too suffer from the ills that have been ours.

We must stay in the League of Nations for the reason that others are in it, others who might be glad if we were to withdraw and who would arrange their affairs and protect their interests without us and possibly at our expense.

Signora Mussolini

My ambition is this—to make the Italian people strong, prosperous, great, and free.

The foreign policy of the present Government is inspired by the necessity for a progressive revolution of our diplomatic and political position in Europe and the world.

Imperialism is at the base of the life of every people which desires economic and spiritual expansion.

May God help me to carry my arduous task to a victorious end.

The Literary Digest

INDIANS IN EAST AFRICA

BU K 074

B RITISH East Africa comprises Uganda Protectorate Kenya Tanganyika Zanzibar Nyasaland and Northern Rhodesia. The whole region is inhabited by the black races of Bantu origin and extends from 5° North to about 18° South of the equator. It is supposed that the Phoenicians and the Hindus traded in ancient times with the East Coast. The element of Sanskrit in the Swahili language and a similarity of some Bantu rites with Indian animistic ceremonies have led some people to assume that a much closer connection existed between India and Africa than has been generally granted. In the eighth century Momhasa and Malindi were important centres of Arab power and important Persian settlements existed at Kilwa at the same time Zanzibar which appeared on European maps for the first time in the twelfth century had been for long an emporium of trade with the East—with Arabia India and China. The Portuguese and the Turks followed in the fifteenth century. The former were massacred at Mombasa in 1631 and finally annihilated by the Imam of Muscat in 1696. Zanzibar was captured by the Arabs in 1784 and for a hundred years afterwards the Arabs were supreme on the East Coast from Somaliland to the Runuma River. The United States of America established a Consulate at Zanzibar in 1836. England followed in 1840 and France in 1844.

The general belief on this side is that there has always been an Indian population on the East Coast of Africa. Vasco da Gama found an Indian colony and according to "the Chronicle of Kilwa" a temple to a Hindu goddess at the Persian settlement of Kilwa. At Malindi, he encountered rebellion amongst the native crew that he had engaged. Unsatisfied in his determination to reach India the Portuguese Captain decided to sail without the aid of natives along the African Coast. It is stated that had he done so, he would have perished amongst the shoals and reefs that line that part of the East African Coast. But it was his good fortune to meet an Indian Captain from the Port of Cambay,

Kanna Mallum by name who took him to the part of Moghadisho (or as some of my friends here say Mukhadisha the point looking straight to India) and piloted him in a straight line to Calicut across the Indian ocean. There has always been an Indian Colony on both sides of the Persian gulf and the treasurers, customs officers and surveyors of the Imams of Muscat have been Indians mostly Hindus—Bhatias from the West and South west of Cutch and Sorathia Bhatias from Kathiawar. When Zanzibar was formed into a separate Sultanate, the Indians who helped the Arab ruler of Muscat and traded between Zanzibar Muscat and India also came over here and settled in the Island metropolis of Africa. The names of Jeram Shivji Ibi Shivji and Lala Baiker are household names in the Protectorate. They had the farm of the customs and probably of other revenue sources and carried on a thriving trade in ivory and slaves. There were also Indian Mussalmans from the West Coast, followers of the Shia Imamite sect.

These men came across the Indian ocean in frail sailing barques from the ports of Memmut and Porehender. These barques are not even now out of use. Messrs Gopal Parshottam a large banking and trading firm of Tanga still possess their own fleet of barques for importing Indian goods and exporting African wares. The enterprising Kharmas of Cutch and Kathiawar put to sea in September with miscellaneous Indian ware pottery, gauls, household necessaries, ~~rice, millet, and sundries, etc.~~ to Malindi sometimes round the Cape Comorin for Rangoon and then cross over here about March. The familiar cry of the potter pedlar or that of the bird catchers' castellan selling simple toys for Indian children is heard with great interest by Indians on this coast during this month which is looked forward to with intense eagerness. The Mussulmans had no other trouble on the voyage but the Hindus who came with the Arabs were staunch Vaishnavas and took great care to remain pure. Even as late as 1910, they used to have their own water and their own food untouched.

by any non-Hindu on the voyage. There is a Vallabhacharya Vaishnavite temple, two Jain temples and a small place housing the phallus of Shiva in Zanzibar besides a Parsi Fire Temple. A Jainite temple has also been recently erected in Mombasa.

From Zanzibar Indians penetrated the territories of the East Coast along with Arabs. With the advent of European conditions began soon to settle down every where and the Indian was the first to take advantage of the establishment of peace. It is generally supposed that the Indians are to be found only on the coast. It is not so. Both Hindu and Mohammedan traders are established in the remotest native villages of East Africa some have even crossed the lakes and are settled in Belgian Congo. I saw a flourishing Indian Colony of 50 traders at Kigoma which is about 750 miles inland on the shores of Lake Tanganyika. About five miles by road across the hills is Ujiji a native village of about 5000 men. Livingstone met Stanley here in 1861 on the beach of Lake Tanganyika under an old mango tree which is still in existence. It was a pleasant surprise to find that there were here Indian shops in the village, two of which belong to Hindus and three to Mussulmans. Travelling over the Tanganyika and Kenya and Uganda Railways we find that all stations have at least one Indian Duka. In the wake of the Indian trader have followed the Indian barber, the Dhobie, the shoe maker, the taxidermist, the milk-seller, the carpenter, the mason, the goldsmith and finally also the Brahman. I was shaved by an Indian barber at Kigoma while the steamers of the Zanzibar Government are entirely manned and captained by Indians. Both Indian Mussulmans and Hindus have also been putting in special effort for getting their children educated and most of the bigger villages have Aga Khan schools or Indian primary schools run by private subscription. Lately has come the Indian clerk, a very useful and cheap instrument in the hands of Government for manning their subordinate services. The political awakening of India and the great publicity which the situation in Kenya received in 1923 have attracted Indians of liberal education to look to East Africa. An Indian press is struggling to grow up and Indian medical men and lawyers are slowly coming in and trying to establish themselves.

In spite of the growth of Indian immigration the establishment of the White races in East Africa has been distinctly injurious to our interests. Our position at the court of Zanzibar has been entirely lost to us and the initiative we possessed in the development of business has passed away from our hands to those of the European races. Before the war it was clearly recognised that the Indian community had only a subordinate role to play in East Africa. As soon as it was found that the Highlands of the mountains of East Africa were suitable for permanent white settlement, deliberate attempts began to be made for confining Indians to only a subordinate role. And when we raised our head in 1923, what formerly were attempts and experiments became definite measures and assumed the forms of a defined attitude. We were to be tolerated in East Africa if we consented to be petty traders and clerks and did not claim social equality with Europeans. The moment we looked up, a blow would be dealt to us.

I shall explain this further. We had in Kenya big Indian merchants and land owners before 1923 and it was with a view to handicap them that the white settlers manoeuvred the political situation to their advantage. The decisions of the White Paper of 1923 were not far reaching enough to satisfy the hunger of the white men. Ever since 1923, therefore, the settlers of Kenya have been trying to draw the settlers and merchants of other East African territories into the orbit of their influence. Wherever there are suitable highlands, prompt steps have been taken to occupy them and get them thrown open for settlement. While a demand for White self government has already been put forward in Kenya white public opinion has been cleverly educated to press for a Federation of East African territories, self-government for Kenya has been refused, but the refusal has been tempered by the decision to appoint a Commission to proceed to East Africa and explore the possibilities of a Union of British East Africa which may either take the form of a Federation or an Empire. This decision has been announced along with a declaration that while making their recommendations, the Commission will adhere to the White Paper of 1923-4 entitled 'Indians in Kenya' in the matter of the Federal or the Imperial policy with respect to our people.

The latest blow to our position lies firstly in the definite move taken in the direction of a federation of East African territories, and secondly in the declaration of policy. The White Paper of 1923-4 definitely and perpetually assigns us an inferior and subordinate role of life in East Africa. A closer union of East African territories is being demanded to make white supremacy secure in East Africa.

Though the position of Indians in Kenya and Uganda was determined by the White Paper, other territories were not affected so far by its principles. Indian position had suffered in Zanzibar and was not what it should be in Tanganyika, yet, theoretically we suffered under no harsher misfortune both on the island as well as in the mandated territory. His Highness the Sultan's Government has always been very liberal and the European and Indian communities in the island have always lived on terms of cordiality. In Tanganyika there has been special endeavour both on the part of Europeans as well as of Indians to keep out the Kenya atmosphere, and it was therefore that the Hon S N Ghose, one of the Indian members of the Territorial Legislative Council, gave his support to Sir Donald Cameron's scheme of non-native settlement on the Iringa highlands. When the Rt. Hon Mr. Sastri

was in Darassalam, the Hon Mr. Dundas, Secretary for Native Affairs, speaking at a lunch given in honor of the former assured him on behalf of the European community that there was no reason why in Tanganyika at least the relations between the two communities should be strained.

The application of the White Paper to Zanzibar and Tanganyika and the ultimate possibility of its extension to Nyassaland and Northern Rhodesia changes all this and makes the position of Indians uniformly risky all over East Africa. In fact, the better class of Indians seem to have realised that there is hardly any future for us on this coast. Petty traders, clerks, and petty artisans have been coming on in great abundance, but no big merchant has come over to invest his capital in this country nor have any large purchases of land been made by Indians. This stoppage of the coming of capitalists, merchants and planters from India is a bad sign. It spells the elimination of Indians from East Africa. Indian clerks are being rapidly displaced by natives and as education advances, native artisans and traders are also beginning to come out. Nobody can object to this, but anybody may also see that the death knell of Indians in East Africa has been already tolled.

THE REVOLUTION IN GYMNASICS AMONGST GERMAN WOMEN

By ALICE MEYER

Berlin

TAKING the German women as they are, one can put them under three categories:

1 The old generation—having no physical culture of any kind.

2 The middle old generation—to whom gymnastics were obligatory in the schools. Their physical culture was of the same nature as that of the boys and originally based upon military drill. There was no separate or special department of female gymnastics, and

3 The younger generation—among whom one finds a reformed gymnastic system specially adapted to the female constitution.

From the middle of the last century, it was thought necessary that women should also have some kind of physical training and culture, but the organisers introduced the same sort of gymnastics as was prevalent amongst the boys. The girls were to take up drill (mostly military) twice a week, and try to do the following exercises very carefully—

Heels together—toes apart,

Fig. I

Fig. II

Breast—up,
Abdomen—in,
Knees—straight, etc.

In fact, it is that kind of exercise, absolutely followed by the boys, and every movement was done by command and sharp military order.

Fig. III

Fig. IV. Childrens' Exercise

During the last decade, a great change has taken place; and the after-war period has revolutionised the woman's gymnastics introducing various systems, which are quite suiting the woman's constitution, and thereby becoming very popular. The individual

Fig VI

Fig. V

Fig. VIII

Fig. VII

systems are, of course, quite different, but there is one predominating principle, common to all *Freedom from boys' gymnastics*.

The question to-day is to give facilities to the development of each individual by all possible means. This development is both physical and according to the latest methods psychical, too.

Fig. IX

Fig. X

Fig. XI

Fig. XII

The first thing is to get rid of the military ground principles: instead of taking a stiff attention-posture, one is to have a free and pliable attitude just befitting the female constitution. Next, there should be no commands. Before any exercise is given, it is first of all fully analysed, and the object and result clearly demonstrated, so that every girl taking the exercise becomes fully conscious of what she is going to do. Thus every muscle group is taken care of, and the whole body becomes lively. Each bit of instruction, that is given, is done not in the commanding tone, but in the suggestive form. The individual exercises are arranged so as to attain the stiffest and the most elastic attitude of the whole organism through the contraction and relaxation of the muscles.

So long we have mentioned all the modern systems in general. Now each particular system will be given proper attention to. It

will be convenient to divide these systems into 3 groups viz:

1. The Hygienic gymnastic,
2. The Rhythmic gymnastic,
3. The Artistic gymnastic.

Fig. XIII

Fig. XIV

The *Hygienic Gymnastic* (Figs 1—VI) It is the oldest one and forms the ground basis for all other systems. This process is built upon the exact knowledge of anatomy. The first thing in this system is that it enforces the formation of tight breast, and tight abdomen, and breathing exercises play a great role in this system. The schools of *Mensendieck* and *Dora Menzler* are examples of this method. There are exercises to set right the hanging abdomen, to avoid the double chin, to strengthen the back muscles to prevent scoliosis, to tighten the abdominal muscles, to keep up proper form of breast and many other similar exercises. A part of the hygienic gymnastics is the *Orthopaedic*

Fig. XV

Exercise and it is mainly therapeutic in character.

The *Rhythmic Gymnastic*—(Figs VII—X) goes a step further. It teaches how to keep harmony and rhythm of the

Fig. XVI

accompaniment. We see that there is a marked development of mind as well as body and it cannot be denied that by following this method a grown up girl with a bit of intellect can make herself worthy both in mind and body. The most important schools of this class are those of *Bode* and

Fig. XVIII

Loheland. Both of them understand into well the typical womanly characteristics, which help in the unfolding and manifestation of the soul of a woman through physical culture. This system is quite popular.

The last one is the *Artistic Gymnastic* (Figs. XI—XIV). This might as well be called "Intellectual Gymnastic," because it is meant only for the highly intelligent class of girls who can carefully receive their own initiative. The propounders of this system are Rudolf von Lilien, Mary Wigman and Jacques Dalcroze. The object of this school is to make the body an instrument of the mind towards its development. The anatomical knowledge is not at all

Fig VIII

neglected and there is also a clearer process of training but it does not end there it goes further to realise the ideas and try to give expression to them (*Expressionism*) It is really worth noting how the students are put into groups while at the same time proper attention is given to the individuality and a careful psychological development of each student is particularly attended to

The traditional exercises of relaxation of the body etc are done very little the teacher gives a theme e.g. Giving Taking Joy Pain "Fight etc and each student tries to express them by the movement of her own body according to her feelings and capacities The aesthetic and graceful movement is not the first thing in this system but the definite and the most clearer expression of the most intensive feelings is what is wanted So it might seem a bit grotesque at the first sight to lay people—but one becomes simply charmed to follow how a band of young girls beginning

to express their individual feelings according to one particular idea, gradually and quite unconsciously work out their ways and ultimately find out the rhythm thus asserting that the movements however chaotic they might appear individually become the very important units to the realization of one great cosmos

We thus see that physical culture has got a strong hold on our women This gymnastic is at present not a hobby of any particular class or sect, but taken up by all of every age. There are innumerable private courses for the girls to take and it is so arranged that the girls can take the exercise at any part of the day One must say that the gymnastic has become quite obligatory during the last 10 years in Germany quite as much as a bath is necessary and it certainly forms a helpful adjunct to keep women sound in body and mind and thus to produce a really healthy nation

The Graduate, the Rayat, and the Book Entry

Sir Daniel Hamilton observes in the *Bengal Co-operative Journal* —

The graduate and the rayat are alike in this respect—both are poor but they need not remain poor much longer. All material wealth is created by the labour of men's brains and hands and as India's brain power is of the best and her hand power only waits to be organized the staggering poverty of India should soon be a thing of the past. The one thing needful is money and as modern money is merely a matter of book keeping and as book entries cost little or nothing to manufacture there is no excuse whatever for India remaining longer in the Slough of Despond.

My authority for saying that modern finance is simply a matter of book keeping is one of the highest in the Empire viz. the Cunliffe Committee appointed by the British Government towards the close of the war to advise what should be done after the war in order to bring about the restoration of normal conditions in matters of currency and exchange.

The manufacture of money is the best paying business under the sun. Jute cannot compare with it. Just think of it—a profit of five or six per cent. on thousands of crores of rupees which cost, practically, only the bank clerks' wages to manufacture. In my younger days in Calcutta I made lakhs and lakhs of book entries but I got only Rs 300 a month for making them and my Benzali colleagues very much less. The banks get millions sterling for the same job. The modern cheque is simply a book entry. The cheque for Rs 1,000, which I sign is only a letter to my banker telling him to debit me and credit some one else with that sum. Bank notes are simply book entries. The ten rupee or one-rupee note is only a book entry written up as a deposit, not on a sheet of paper in a bank ledger but on a loose sheet in my pocket, certifying that I hold at the debt of the nation and at my credit ten rupees worth, or one rupee's worth of rice, or cloth or gold or silver whatever I may want.

The British banks make their huge profits and pay their sixteen and eighteen per cent. dividends very largely by lending money which they do not possess. Like the lawyers they fatten on other people's misfortunes. When other people require money the banks manufacture it for them out of the borrowers' own trustworthiness or credit and charge five or six percent. for doing so. And when a war or a great commercial crisis comes along and the banks are asked to pay the deposits Government comes in their help as the British Government did in 1914 and as the Japanese Government has done in 1927 and authorizes them to pay out scraps of paper instead of the gold which they profess to be able to pay but cannot and so the situation is saved and trade resumes its normal course as if nothing had happened.

India has, for years been endeavouring to increase her manufacturing industries. She has now cotton gins and iron industries in full swing but the safest and most prosperous industry of all manufacture of book entries or good paper money

has somehow or other been overlooked. Now is the time to make a beginning. All that is necessary is that there should be a plentiful supply of reliable men in need of money. The money is in the moneyless men who borrow and not in the bank which lends. India has 250 million of these poor men who can be organized co-operatively and made reliable. They require first of all 600 crores to free them from the mahajan and they will be delighted to pay five or six per cent., or more for their freedom. If Government takes up this business and manufactures the 600 crores these poor men will pay 30 crores every year into the Government Treasury. If Government manufactures another 600 crores to give the 250,000,000 a fresh start in life they will pay another 30 crores into the Treasury. And India will want a great deal more than 1,200 crores before the ship of State is really afloat and under full steam and the more money Government manufactures and lends to needy reliable men who will return it the more will the needy ones and the Government prosper. And when Government or rather I should say the nation takes all the risk in times of stress, it would be both foolish and unfair not to take the profit in times of peace and it is here that the graduate and the rayat can come in to reap a rich harvest of banking profit for their country and lift themselves out of poverty at the same time.

What I have to suggest therefore is that Government arrange at once for a great forward movement in the development of the Co-operative banking system, by harnessing on to it the brain power of the graduate for the organizing of the hand power of the rayat. The combination of both will give the world a new form of Constitution, a Co-operative Commonwealth which will preserve the freedom of the individual—a Commonwealth in which Man and not money will be the Master and a constitution stronger than any party system can make it and greater than Mussolini's Corporative Commonwealth for under it Labour and Capital will become One, and India a united Nation.

Education and Communal Understanding

Miss A. B. Van Doren asks in the *National Christian Council Review* —

In the presence of communalism and its attendant evils, what responsibility is laid upon the followers of Christ in India and what opportunity is open to us? That such responsibility and opportunity do exist has been affirmed so often that the statement has become a commonplace. Yet how much have we as Christians actually accomplished? Have we not in most cases been content with the utterance of a pious hope, expressed in the form of an exhortation or resolution but never translated into a programme of action?

Much material has been brought forward to prove that the roots of communal enmity are embedded in economic rather than in religious differences. This theory is not to be disputed by the present writer. The object of this article is to show that whatever be the source of these troubles their future solution is in the hands of the general

INDIAN PERIODICALS

The Mathematical Basis of Hindu Iconography

Rupam contains an article by Mr D B Havel on the mathematical basis of Indian iconography which begins thus —

Though Hindu philosophers have laid down rule for the making of sacred images for philosophy regulates the whole of the Hindu social fabric yet the fear that the artistic temperament might lead the worshipper astray has always led them to prefer mathematical symbols for ritualistic purposes as being more exact and logical than humanistic forms conceived by artistic imagination. The Vedas declare against images of wood and stone because the gods themselves come to the sacrifice and can be seen by the spiritual eyes. Images were only for the vulgar crowd not admitted to the sacred feast whose spiritual sight was undeveloped. For the whole of the Vedic period or until a few centuries before the Christian era the higher Brahminical ritual had apparently no recognised place for sculptured or painted images of divinity though they were doubtless used in the rites of the common household. The prejudice was so strong that in early Buddhist art, which includes practically all that is extant of early Indian art, the person of the Buddha is never represented except symbolically by a horse without a rider an empty throne the tree of wisdom or a relic shrine, the stupa. On the other hand the use of *yantras* or geometrical symbols which still take an important place in Brahminical ritual is recognised by the philosophers of the Upanishads. Geometry in fact was an essential part of Vedic ritual. The construction of altars involved comparatively advanced problems in practical geometry. The sacrificial priests had to orientate the altars according to prescribed rules and to determine astronomically the times of the seasonal tribal sacrifices. Metaphysics aesthetics and mathematics thus developed simultaneously in the Indian philosophical schools. The temple builders of later times applied the geometric science of Vedic sacrifice not only to the construction of the temple itself but also to its symbolic ornamentation and to the images enshrined in it. When long afterwards Indian craftsmen were forced into the service of Islam they could no longer indulge their fancy in the richness of animal and human forms with which Hindu and Buddhist art abounds. They had to restrict their imagination to the elaboration of geometric patterns a great deal of what we call Saracenic art is just Hindu design reduced to its geometric foundations.

The Indus Valley Discoveries and the Assyrian Affinities of Ancient India

Professor C S Srinivasachari, M A, writes in the *Young Men of India* —

THE SIGNIFICANCE OF THE DISCOVERIES IN THE INDUS VALLEY

The discoveries which have been recently made in Sind and the south west Punjab are as remarkable as any ever made in this country and equal in interest and significance to those made by Schliemann Evans and others in the prehistoric Greek world. Harappa in the Montgomery District of the Punjab and Mohenjo-Daro more than 160 miles away in the Larkhann District of Sind are the sites of these famous discoveries. Harappa has been known to archaeologists as the find place of a unique class of seals engraved for the most part with the effigy of a bull and bearing inscriptions in an unknown pictographic script (as early as 1870 these were noted by Sir A. Cunningham the pioneer archaeologist). Other specimens of this type were acquired for the British Museum but the secret of their age and character remained a mystery till recently.

HARAPPA

R B Deyaram Sahni made large excavations at Harappa in 1920-21 the operations were resumed on a larger scale two years later. The site of Harappa was shown to be manifestly that of a great city covering a vast area and composed of many strata of successive buildings like the strata that were discovered in the Christupa near Taxila by Sir J Marshall some years ago.

MOHENJO-DARO

The site of Mohenjo-Daro, being nearer to the main centre of the Indus culture has been found to be far richer and vaster in its treasures. It has been known to contain some articles of interest but till the recent excavations were made there was no suspicion that the remains there dated back much earlier than the times of the Kushana kings to whose age belonged a large number of coins found on the surface of the site—as also the masonry casing of the ruined monument which crowns its highest point. The excavation of this site was made under the immediate supervision of Mr R. D. Banerjee in 1921-22 and he is the main source of the subsequent discoveries made there.

The finds from these two sites were examined by Sir J Marshall and found to belong to the same stage of culture and apparently to the same age and they were totally distinct from anything known previously in India.

The similarity between the objects found at Mohenjo Daro and Harappa and those found in the

ancient Sumerian sites has been confirmed by the identity of a seal which was found in the debris beneath a temple of Hammurabi's time with those found in the Indus valley sites

CULTURAL DISTINCTIVENESS OF THESE HINDS

Sir John Marshall says that the civilisation which these discoveries reveal was developed in the Indus valley itself in spite of its affinities with Sumeria, and was as distinctive of this region as the civilisation of the Pharaohs was distinctive of the civilisation of the Nile. These discoveries ought to show in time that the civilisation of the Indus valley formed part and parcel of a much wider sphere of culture, which embraced not only Mesopotamia and India, but probably Persia and a large part of Central Asia as well and which may have extended even as far west as the Mediterranean where the early Aegean civilisation presents certain somewhat similar features

The writer adds in a Note

GREATER INDIA IN THE EAST—DIFFUSION OF INDIAN CULTURE

Note.—While ancient Indian culture was so much in contact with Mesopotamia, and is now becoming increasingly clear that the eastern diffusion of Indian culture spread widely and deeply over the Malaya Peninsula, and Archipelago Indonesia and China. Prof G Elliot Smith in an article contributed to *The Illustrated London News* (January 10 1927) traces the cultural (as manifested in art and sculpture) links that possibly existed between Asia and Central America by means of resemblances in figures between Maya art and the medieval art of Indonesia and Indo-China. He would draw a growth from the Gupta art of India to the art of the Tang Period of China, and then on to the Maya art of Central America in the eighth century

The Decrease of Hindus

The Standard bearer observes —

It is to be added from Census of 1921 that the Hindus have decreased by about three quarters of a million while the Christians have increased by nearly a million maintaining the rate of increase shown during the decade 1901-11. As a matter of fact the Census of India of 1921 shows an increase in all India of 31.74 and 22.7 per cent. among Mohammedans, Sikhs and Christians respectively, and a decrease among Hindus amounting to 5 per cent. It should be interesting to note that the Census figures for Hindus include an overwhelming proportion of low class people amongst whom the practice of widow marriage is widely prevalent and who are remarkable for their fecundity. No doubt, it is from these classes that the missionaries whether Mahomedan or Christian draw the greater number of their converts, as we are told not by the powers of conviction and arguments but by the prospect of gain and the fear of punishment.

Hinduism, in spite of its orthodox puritanism and high considerations cannot long overlook this lesson of figures and sit tight in spiritual aloofness

and non-chalance. If it is not merely to endure as the spirit, but also continue to live in the body in a world of rival communities, each striving for supremacy and self expansion, it must not blink at facts, but seriously bestir itself up to action, with a view to stem the tide of its numerical decrease and continual dismemberment. If both Christianity and Mahomedanism can live and grow as aggressive religions even at the expense of Hinduism, why should not the Hindus awaken themselves to the pressing need of such a progressive orientation and prepare themselves at once for an offensive and defensive plan of action?

Women's Sphere in Public Life and Inter-Communal Civil Marriages

We read in the *Yonug Theosophist* —

The question of women and their sphere in public life has evoked considerable discussion in the country, particularly in the last few months. Newspapers have devoted columns in expressing their views and in Bombay, young men and women have been having their say. Lady students of one of the local colleges have given vent to their feelings that education will be dull without the boys to look at. It is a happy idea happily expressed. The system of co-education has been indicated by the verdict of the lady students. This has been followed by a debate at the Bombay Students' Brotherhood, which recorded its verdict that inter-communal civil marriages are conclusive to the progress of India. The interest taken on these occasions the trend of the discussions and the verdicts indicate clearly that the younger people are getting determined to decide for themselves what is best for them as men and women, who will one day have to take up the responsibility of governing the State. None can be entirely satisfied at the way in which the propositions were argued and debated. No clearcut issues were put before the assemblies and it is difficult to draw a conclusion as to whether the propositions put in assertive forms defined correctly the feelings of the younger people in the country. The fact is, they have not been able to grapple with the problems in as scientific a manner as it warrants, owing to their being handicapped in the task by the absence of any definite form of questionnaire to answer

Sunlight, the Universal Benefactor

Dr A. E. Clark, M. D., writes in the *Oriental Watchman and Herald of Health* —

It has been said, and truly so, that the most precious things in life are those which are free for the asking. These may not be the exact words but they express the idea. And what might these most precious things be? I have in mind three, to which others can be added — Sun light, Air and Water. Who cannot secure these? And what price can purchase them if they are missing? It is true, we can manufacture artificial sun light, we can also produce liquid air and even water can be made by combining two gases under proper

tion of students now passing through our schools and colleges. The India of the future lies with them—its antagonisms or co-operation, its divisiveness or oneness.

Students of Social Psychology are coming to believe increasingly in the malleability of human material. To an astounding degree the children of a nation become what the educational leaders wish them to be. Germany is the chief instance of a nation re-made and mis-made by its educational system. There are many other examples of education set to an end. Bertrand Russell says:

Take as examples the Chinese *literate*, the modern Japanese, the Jesuits. Dr. Arnold and the men who direct the policy of the American public schools. All these in their various ways, have been highly successful. The results arrived at in the different cases were utterly different but in the main the results were achieved.

Are we then wrong in contending that if the leaders of Indian education were to set before them as a prime objective the unification of India, incredible changes might take place within the space of one generation?

That in the minds of most educationists Indian and foreign no such conscious objective obtains is not difficult of proof. Perhaps the absence of such an aim may be due partly to the old idea of education as the business of imparting information. Modern educational theory tells us that the more important function of education is the creation of attitudes and habits—states affecting emotion and conduct. Much of the information acquired fades with the passing of years; attitudes and habits grow ever stronger as they harden into character.

Swami Saradananda

Prabuddha Bharata has been publishing notes of conversations with Saradaman Devi, wife of the saint Ramkrishna. In the course of one of these conversations she referred to the late Swami Saradananda, then alive and observed—

And Sarat—how hard he works! how silently and patiently he bears all troubles! He is a *Satlu*, what need has he personally to do all this? They can if they will remain ever in uninterrupted thought of God. It is for your benefit that they are dwelling on the lower planes. Ever keep their character before your eye and serve them. Ever remember whose child you are and who is protecting you. Whenever any evil thought comes to the mind say to yourself: Can I bring her son ever do such a thing? And you will find that a new strength has come to you and you will be filled with peace.

The Importance of Commercial Intelligence to National Economic Progress

Mr St Nihal Singh observes in *Welfare*

In view of the importance of commercial intelligence to India's economic well being the organization of a special agency to secure and to

disseminate such information should receive careful attention from our people.

The industrially advanced countries in Europe and America awoke to such a realization a long time ago. They have during the last generation expended much thought and money upon the organization of a service which would zealously gather to other countries information that would foster foreign trade and by assisting manufacturers and merchants to form new connections, lead to the expansion of industries at home and provide profitable work for traders, brokers, banks, insurance companies and shippers.

Britain, Germany and the United States have found such a service so valuable that they have extended its operations to comprehend the whole world. Some of the nations have seen the wisdom of making this agency a substratum of the diplomatic service abroad and have placed it under the direct control of their commerce and industry departments.

The attitude which a nation displays towards spending money upon maintaining such agencies in foreign countries for the stimulation of trade furnishes a correct index to its efficiency and progressiveness.

Judged by that criterion, the Government of India can neither be regarded as efficient nor progressive. Until recently it did not possess any organization of its own charged with the duty of collecting in any country outside India, information which would stimulate our manufactures or otherwise contribute to our economic betterment. Even when it finally realized what the wide-awake nations within and without the British Commonwealth were doing in this respect, it considered that it had discharged its duty when it appointed a civil servant to act as India's Trade Commissioner in London.

The permanent officials who hold our destiny in the hollow of their hands show a pathetic faith in the members of their caste the I.C.S. If an enquiry into the fisheries of a distant country is to be made, they pick out some person belonging to their guild irrespective of whether or not he possesses specialized knowledge of fisheries. The mere fact that in some cases the permanent officials who have been placed upon special duty for which they did not possess the requisite scientific qualifications have done well especially in view of their limitations, puts up the pride of our rulers and intensifies their passion for perpetuating that practice.

Units of the Empire which no longer are controlled from Downing Street do not show such perversity. If need arises for making a scientific survey the work is entrusted to a scientist specially qualified in that particular subject and not to an official bound up with red tape. If an organization for stimulating trade is to be started they staff it with men possessing special gifts for discharging such duties instead of uprooting official beings from their routine duty and despatching them abroad on a sort of glorified joyride.

If we are to create a really efficient commercial intelligence service we cannot do better than follow the example that Canada, the oldest self-governing Dominion in the British Commonwealth, has set us in that respect.

Cottage and Small Industries of Bengal

Mr A C Mitter, BSc (Engin), London
writes in *Welfare* —

In this age of the advent of industrialism in India and the springing up of a large number of mills and factories equipped with gigantic power driven machinery in the different parts of the country, people are apt to overlook the economic value of our home industries. There are some, who have been so vitiated in their outlook, by the glaring influence of Western industrialism that they think, that cottage industries in Bengal, have no right to exist in these days of large scale production, and the sooner they die out, and are replaced by up-to-date large factories, the better for the country. Such opinion only betrays hopeless ignorance of the condition of rural Bengal and requires no comment. We have so many mills and factories on the bank of the Hooghly but have they helped to improve the economic condition of the masses in the country who are mainly agriculturists? Some people have of course got employment as wage-earners in the mill areas but Bengali labourers are seldom found there and is it desirable in the best interest of the country to draw them out of the restraining and educative influence of communal and domestic life and place them as day labourers in the industrial centres where they are likely to degenerate soon into moral wrecks and develop a spirit of turbulence which is an inevitable fruit of industrialism? Why should we blindly copy the Western economic organisation when the Western thinkers themselves are condemning it in no uncertain terms? Mr Joseph Chamberlain speaking of the modern economic problem of the West stated that "Never before in our history was the misery of the very poor more intense or the conditions of their daily life more hopeless, and degraded, the vast wealth which the modern progress has created has run into pockets, individual and classes have grown rich beyond the reach of avarice but the great majority of toilers and spinners have derived no proportionate advantage from the prosperity which they helped to create".

Agricultural Holdings in Japan and Bengal

Mr S. A. Latif says in the *Calcutta Review* —

In the matter of size of the holding the Japanese and the Bengali are almost similarly circumstanced. But the Japanese cultivator is far more prosperous than his Bengali compeer, and this is due to his superior methods of agriculture and better organisation. In Japan there are diverse forms of co-operative organisations and brotherhoods. There are societies for the improvement of seeds and manures, for killing insects and destroying weeds, for breeding cattle and the like. The evil of fragmentation is dealt with in that country by the adoption of methods of communalism which prevailed in the days of yore in India. The Japanese law permits a certain majority of farmers

in a village to apply for forcible allotment and "restriping" of the land, each man receiving a consolidated block in one or two places. In the Punjab Co-operative consolidation by consent has been effected in a number of villages. There should be some sort of legislation to enforce the consolidation of holdings where a majority of cultivators in any area for adequate reasons apply for it. In any case co-operation is the way thing needful and truly did His Royal Majesty on the occasion of his coronation in India observe

"If the system of co-operation can be introduced and utilised to the full I foresee a great and glorious future for the agricultural interests of this country"

Railway Sleepers

According to the *Indian and Eastern Engineer* —

Of the greatest interest to permanent way engineers should be the valuable research work which has been carried out for years by the Forest Research Institute of Dehra Dun on the subject of Sleeper Supply. The object of the detailed and continuous investigations that have been taking place in connection with this subject has been to ascertain to what extent as to quality, the various indigenous woods of India are available to replace sal teak and deodar and imported woods for use as railway sleeper material. Investigation of this subject although it has been proceeding from as far back as 1911 is by no means complete and is still continuing nevertheless, there has already been gathered a great mass of information on the subject of various Indian woods which goes far to prove that there is no necessity for Indian Railways to depend upon imported timbers when there are practically inexhaustible supplies of wood which can be made suitable, if not already so, growing within the bounds of the Indian Empire.

Tests of the actual life of sleepers have shown that this is much greater than was hitherto thought and this holds good of timbers which can be used untreated like teak, sal and deodar, or those that need treatment. In 1922 it was held that the life of five Indian woods named chir, kail, m, kanyin and sam varied from 10 to 12 years when treated with preservative but it has already been found out that 14 to 16 years is nearer the correct figure while it is quite within possibility that even this life will be exceeded.

Besides the suitability of Indian woods for sleeper work, the Institute is also examining the suitability of Indian timbers other than teak, for railway carriage building. The difficulty is one principally of seasoning and experiments are being made in artificial seasoning with the use of drying kilns. This, it is expected, will secure the desired results in quite a short space of time compared with the twelve to eighteen months in which timber may have to be stored while undergoing air seasoning. The saving in interest on capital due to any appreciable saving in time is obvious.

Women Drivers

We read in *Indian and Eastern Motors*

The woman driver is not quite as common in India, as in Europe. The last few years however have seen a large increase in her numbers. In big towns such as Delhi, Bombay and Calcutta women show skill and coolness in threading their way through traffic conditions calculated to make the stoutest heart quail.

The Basis of Success in Speaking

Isla M. Hutcherson writes in *The Kalpaka* —

Success in speaking depends upon the ability of the speaker to present so clear so precise so complete and true a picture or thought form to the mind of the persons addressed that they may view the subject in as clear a light as the speaker. Even though a speaker have a truly worthwhile message and be fully conversant with the matter from beginning to end it by no means follows that when he mounts a public platform the attention he has momentarily secured will be retained throughout the discourse or that the words he utters will leave any effective impression. Other and most important factors must be taken into consideration notably psychology the science of the mind. There are certain definite rules governing the transmission of thought which must be observed to achieve success. Ignorance of these laws may bring to naught the noblest message ever spoken. This then is a requisite for successful speaking that the speaker learn the gentle art of tuning in of bridging the gap which lies between himself and his audience.

How is he to do this? By establishing a feeling of fellowship warming up his atmosphere so to speak. Some jovial Jupiterian remark helps to relax any exultation, tenseness and attract the interest of the indifferent, thus clearing the way for an introduction of the subject. The bigger the subject the more important the details of approach. When the attention of the audience is gained it must not be allowed to wander but by every imaginative descriptive appealing convincing art of psychology it must be held and the result will be like unto the successful anchoring of the vessel.

The only course open to one who desires to form a solid basis for effective speaking is this: after he has mastered his subject thoroughly so that he is able to approach it from every known angle he should practise all the psychological rules of speech making, upon every man, woman and child within the radius of his environment who will listen to him. He might even try it on his dog for at times animals show a very fine sense of discrimination. In this way he will learn how to appeal to peoples sympathies as well as their reason how to awaken a desire for knowledge and how best to supply the inner craving of the heart for spiritual food. Thus he will gradually become able to paint so realistic a picture of the benefits that will accrue from the acceptance of the truths he proclaims that his audience will be eager to put them into practice.

Lokamanya Tilak

Mrs. Sarojini Naidu contributes the following poem on Lokamanya Tilak to *The Volunteer* —

How shall our mortal love commemorate
Your sovereign grandeur O heroic heart?
Changeless austere your fame is counterpart
Of your high storied hills inviolate
Your proud immortal deeds irradiate
The larkness of our land and star-like dart
The lustre of your wisdom valour, art
Transfiguring sorrow and transcending fate
Hail dauntless soldier hail intrepid sage
Who taught your nation freedom's *Gayatri*!
Immutable from the redeeming flame
Your ashes are our children's heritage
And all the epic rhythms of the sea
Acclaim your pure imperishable name

Bengalis and the Arya Samaj

Mr Ramesh Chandra Banerji writes in the *Vedic Magazine* —

Bengalis have no reason to boast that they are born to be intellectually superior to the people of other provinces. Neither should the people of any other province entertain such pride. Although a look at the ancient and medieval Sanskrit literature—a thing of which India can justly be proud—shows that the number of Bengali philosophers, lexicographers, poets, prose writers and mathematicians (I mean the original writers) is almost nil still this fact, I believe, does not prove the intellectual inferiority of modern Bengalis to Punjabis, Madrasis, Marathis and others. It is very injurious to the cause of India's progress to raise the question directly or indirectly of the intellectual superiority of any province.

The fact that the Arya Samaj has not made much headway in Bengal is not I think due to the Bengalis refusing to believe in the doctrine of the infallibility of the Vedas, but, to want of sufficient propaganda. The provincial exclusiveness of Bengalis and non Bengalis is also partly responsible for it. But if sincere and zealous preachers carry on propaganda in the towns and villages and if the Arya Samajists shake off their provincial aloofness and join in such work as education of depressed classes and do their duty of preaching the Vedas earnestly and systematically Bengal is bound to join the *Sauraj*. We need not despair seeing that the farthest corners of Southern India are now turning to Arya Samaj as a result of good *prachar* work.

Paragraphs from "Stri Dharma"

The following paragraphs are taken from *Stri Dharma* —

NEW WOMEN MAGISTRATES

Under the title of "Welcome to Eve" the *Times of India* reports a Dinner of the Society

of Honorary Presidency Magistrates which gave a hearty welcome to the new fair members of the 'rent unpaid'. This happened because Bombay has at last wakened up to the fact that many of its women can act as most valuable dispensers of justice in collaboration with their brothers and Miss Contractor, M. A. Mrs. Gligant, Mrs. Mudraokar were last month nominated to act as Honorary Presidency Magistrates for Bombay City and eleven other ladies for other towns in the Bombay Presidency. Miss Contractor in responding to the welcome on behalf of women magistrates expressed the hope that women by their common sense and inborn intention to reach the right conclusions would more than justify their recruitment to the Bench and that in the merciful administration of justice in general and in the disposal of cases involving the interests of women and children in particular they would provide an element which they alone could furnish. Miss Contractor is the Principal of the largest Girls' High School in Bombay and has made a World Tour. Mrs. Mudraokar is the wife of one of the High Court Judges and is a great patroness of Music and the Arts. Both are members of the Women's Indian Association. A very popular choice has been made in the appointment of Mrs. E. Alamammangathayaramma as Honorary Presidency Magistrate in Madras. She is a fluent and well-informed speaker and has been a helpful worker for many years in social reform work.

THE INDIAN STATES LEAGUE

The Kotah State in Ajmere vicinity has promulgated a new Marriage Act with effect from the 1st July 1927 prohibiting the marriages of girls under 12 and boys under 16 as well as of girls under 18 with men above double their age and of unmarried girls over 18 with men over 40. The sale of girls in marriage is forbidden. Cases under this Act will be triable by a First Class Magistrate and punishable with fines up to Rs. 1000 and six months imprisonment. Well done Kotah!

In the Madura Municipality South India, reports that 40 dhams have already joined a class for their better training and a fully equipped Maternity home is also being organised in that city. And again from Poona, that nursery of all sorts of activity for the welfare of women comes the report of the formation of a new Society for the training of the Village Dhams arising out of the fact that 113 dhams out of 61 villages had attended Midwifery of whom 108 had become thoroughly trained. In addition 11 school mistresses under the same scheme had received maternity training. This Village Maternity Association has started under full Government auspices and has received the promise of a Government grant equivalent to one-third the expenditure up to a maximum of Rs. 10,000.

The Royal Indian Navy

Sir P. S. Sivaswami Aiyer writes in the *Indian Review* —

The obnoxious features of the Bill are that the control of the proposed navy is vested not in the Government of India but in the Imperial Govern-

ment that the provision for recruitment for Naval Commissions is wrong in principle in that it imposes no statutory obligation for the manning of the ships by Indians and that it enables the Imperial Government to employ the Indian Navy in any part of the world without legally imposing upon it a liability to pay the expenses incurred during the period of such employment. To all these criticisms the answer of the Under Secretary of State was as unsatisfactory as might be expected from a Tory Government. As regards the question of control the answer of Lord Winterton was that the army in India was not under the control of the Indian Legislature and that it would be anomalous and inconvenient from an administrative point of view if the control of the navy were vested in the Legislature. Indians are far from satisfied with the existing position in regard to the army and the existence of one anomaly is no justification for the introduction of another with regard to a new arm of the defensive force to be hereafter created nor are anomalies unknown to the English Constitution. With regard to the army it may be thought that in view of the immense importance of it to the safety of India, it might be harmful to allow any interference by a Legislature wanting in experience of military matters. The new naval force on the other hand is one of very small dimensions involving a comparatively small cost of about 68 lakhs of rupees per annum and the risks which may be apprehended from injudicious parsimony or by embarkation upon an extensive policy of Indianisation are comparatively small. On the other hand it is overlooked that if this arm of defence is transferred to the control of the Government of India and the Indian Legislature, it is likely to receive more consideration and support than those branches of the defence which are excluded from the control of the Legislature.

Child Marriage and Education

Mrs. Mathulaxmi Reddy writes in the *Social Service Quarterly* —

I can assure the Government—and there are public leaders like Sir P. S. Sivaswami Aiyer and Puodit Madao Mohan Malaviya who can assure them—that there is no text in our religion which gives support to this suicidal custom and child sacrifice. The very fact that the ancient Hindus were having Swayamwara by which the women were allowed full freedom in the choice of their husbands is proof positive that marriageable age of girls must have been over 16 at any rate because the ancient Hindus were wise enough to know that girls of 11, 12 or 13 or even 14 do not possess enough judgment or discrimination to choose their helpmates.

Even if 'no-change orthodox people imagine it to be religion I say the old order must change yielding place to the new. The world is not stand still is ever progressing if we want to prosper we must keep pace with the world.

I may note here the resolution passed at the All India Conference of Women held at Poona, the representative conference of women called to

consider questions relating to the education of women in India. The resolution was as under —

"This conference deeply deplores the effect of early marriage on education and urges the Government of India to pass legislation making marriage under sixteen a penal offence. It demands that the age of consent be raised to 16. It whole-heartedly supports as a step to this end Sir Hari Singh Gour's Bill which will come before the Assembly this session. It sends a deputation from its delegates to the Legislative Assembly to convey to its members the demand of women on this vital subject."

As women constitute more than half the population even if the Government desires to be impartial if it wants to do justice and not provoke criticism it ought to take into consideration the unanimous resolution of the "All-India Women's Conference" and give its verdict in favour of Dr. Gour's Bill especially in the absence of women representatives in the Legislative Assembly, (which cannot be a truly representative one from the woman's point of view) a measure concerning the health and happiness of the womanhood of the country and the future race.

Dairying as an Indian Village Industry

Mr Wm Smith, Imperial Dairy Expert, writes in the *Journal of the Central Bureau for Animal Husbandry and Dairying in India* —

The need for the establishment of village industries in this country in order to provide employment for the cultivators during the slack seasons of the year and for the non agriculturally unemployed throughout the year has been long recognized by students of rural economics. Mr Gandhi's advocacy of the *charkha* is prompted by his recognition of this need, and it seems strange that in a country like India where milk and the milk products are so highly valued and so necessary as human food little or no attention has been paid to the development of dairying as a village industry. Properly organized village dairying would provide a profitable outlet for a variety of energies. It would give all the year employment for the cultivator cow owner and his family and it would create a demand for skilled dairy factory managers and operatives of various kinds.

In all countries where dairying has reached an advanced stage, the rearing and keeping of cows as an integral part of the system of farming is practised and the village creamery or dairy factory is utilized as the means of manufacturing and marketing the milk which the farmer cow owner produces.

There are many reasons why it is essential that the small holder milk producers should employ a rural factory system for the disposal of his milk. One is the fact that the raw material he produces in the case of milk is of such a perishable nature that it must be dealt with in any process of manufacture within a few hours of its coming from the cow, and the second is the bulky nature of the natural product. Cows' milk contains some 85 per cent. of water and the cost of transport of a bulky product of this kind over any distance must

always be high in proportion to the market value of the food solids it contains. The third reason lies in the fact that the individual milk producer in India in most cases is a small holder owning only a few not very efficient cows or buffaloes and the actual quantity of surplus milk he has available for sale or manufacture after feeding his family is not sufficient to enable him to convert it into any marketable commodity of a sufficiently high quality to command a profitable market and even if the quantity available by individual producers was large enough to be profitably manufactured by the producer it is not possible for the ordinary cattle-owner to acquire that expert technical knowledge and marketing experience necessary to manufacture and sell milk products. Then again in the world's markets to-day continuous uniformity of quality and large bulk supplies are demanded if the highest prices are to be paid so that the manufacture of milk into any of the foodstuffs in demand to-day cannot be done by the milk producer. It cannot profitably be done by a factory situated remote from the milk producer and it must be done in the rural dairy factory.

In countries so highly developed agriculturally as Denmark, Holland, Ireland, New Zealand, the United States of America and Canada, the village dairy factory is a feature of the rural landscape, and it will be a good day for India when this can be said of our agricultural areas. Not only will the development of village dairying in India help to solve the problem of rural unemployment but it will greatly increase the fertility of the soil and the output from the same, it would improve the quality of the cattle of the country and generally improve the physical well being of the rural population.

Indian village dairy factories might well follow the example of those of Denmark, New Zealand, Ireland and Holland and be organized on a cooperative basis and they might take the form of milk factories for pasteurizing and cooling milk to enable its being sent by rail to cities for sale as fresh milk. There might be cheese factories, *gha* factories milk condenseries, casein works, dried milk industries or combined factories capable of turning out some or all of these products. The present methods of manufacture of *gha*, Indian cheese or dried curd, the existing bazaar methods of evaporating the water from milk over an open fire, and especially the methods or rather lack of methods of utilizing the by products of *gha*—butter milk or skim milk—are crude and wasteful, and the economic scope for the establishment of a village dairying industry is great and the possibilities of development are unlimited. The establishment of a factory of this class in a village calls for the employment of expert factory managers who must also be business men able to buy manufacture and sell, it requires expert machine mistsries or mechanics to erect, work and repair the plant it needs accountants and clerks trained in commercial book keeping it demands expert butter or cheese makers or condensed milk makers and it provides an opening for unskilled labour of the best type. Apart from the factory side of the picture the development of village dairy means more employment for the farmer and all his family in the rearing, feeding and milking of his cattle, and for the adult males of his family in the increased cultivation and production which

an increased supply of farmyard manure will give. Volumes more could be written advocating the development of the dairy industry in India but this short note is penned in the hope that it may

induce Indian rural economists to consider the matter from the point of view of its solving or partly solving the great question of rural unemployment.

FOREIGN PERIODICALS

Japan's Cotton Industry

According to *Present day Japan* the "Asahi" English annual supplement

Japan's cotton industry was founded in 1867 and has developed to its present status during sixty years. At present there are fifty three companies all of which are included under The Japan Cotton Spinners Association of Japan their aggregate capital reaching ¥ 497,037,500 the various reserves amounting in total to ¥ 229,376,494 and the spindles and looms numbering 5,419,767 and 1,719 respectively. Their total output of cotton yarn last year amounted to 260,774,600 bales (one bale contains 400 pounds) and the raw cotton consumed totalled 250,037,200 actual bales Japan therefore stands second in the world, America being first, so far as the consumption of raw cotton is concerned. Thus the industry has come to occupy the foremost position among the industries of Japan.

Last year the imports of raw cotton were valued at ¥ 795,030,200 while the exports of cotton goods were worth ¥ 450,971,010 the former making up 31 p.c. of the total imports and the latter 24 p.c. of the total exports of this country. Naturally the rise and fall of this industry has an important bearing upon the national economy.

They have held nearly all the offices mentioned, but none has ever been suggested for or elected to the Presidency. Some day an outstanding Jew may attain a prominence which will cause him to be considered as a Presidential possibility. He may point to the fact that certain of his coreligionists have served with distinction in the House and the Senate in the Cabinet and on the Supreme Court bench. But must he feel that because of religious differences or prejudices his progress to the highest office in the land is to be halted?

These are questions that are being debated at this time chiefly because the Presidential claims of Governor Smith cannot be ignored. It is a condition and not a theory which confronts us. The best part of it is that this matter is being talked about with more frankness and less rancor than would have been possible in any previous stage of our national existence. Religious bigotry like the poor we have always with us. But the kind we now have is the open variety rather than the secret hostility of previous days. That we have religious liberty in this favored land is a matter of gratification to all reasoning men and women. But there are many who feel that this much-desired tolerance will not be complete until every office in the Nation from the lowest to the highest, is within the reach of all regardless of the manner in which the aspirant worships or fails to worship.

Religious Discrimination in Politics

Mr George Barton writes in *Current History* —

Theoretically we have no religious test for office in this country yet in this year 1927 we are discussing whether an otherwise available candidate of one of the major parties can be seriously considered as a candidate for President of the United States because he happens to be an adherent of the Catholic religion. There is no constitutional inhibition. The qualifications of a candidate, according to that document, are quite simple. The nominee shall be a natural born citizen 35 years of age and a resident of the United States for at least fourteen years. We have had Catholic Mayors, Governors, members of the House and Senate, Cabinet officers and Justices of the United States Supreme Court, but never a Catholic President.

What is true of Catholics in this regard is equally the case with those of the Jewish faith.

Treatment of Indians in a British Mandate

Mr R. J. Udani observes in *The Indus* — Writing on Tanganyika, Mr C. F. Andrews states —

It would have been much better probably for Great Britain to have taken by force as war booty German East Africa and to have done with it. Then we should have known exactly where we were and a spade would have been called a spade. All the camouflage of a war to end war, a war without conquests or annexations, a war for freedom and the rights of weaker nations, a war to establish determination would have been abandoned. But to-day Great Britain is unctuously congratulating herself on her own virtue, at the very time that she has been accomplishing exactly the same butaneering acts of war spoil and war booty which William the Norman and his barons accom-

plished after the Battle of Hastings in the year of 1066

These thoughts have come to me as I have heard at first hand the story of the German currency notes by which the Indian merchants of Dar-es-salaam and Tanga (practically the only merchants involved) have been robbed overnight of a sum amounting to anything over fifty lakhs by a war measure which has never been made good.

"The facts appear to be these: the Germans called in all the silver coinage when they had conquered the East African coast in order to pay their native askaris, who very rightly would not accept anything but silver coin. The merchants were compelled to give out of their banks and safes all the silver money they had in possession and they were paid for this in German notes. Gradually in this way the greater part of the German currency notes found their way into the hands of the Indian merchants. Then when the process was very nearly complete and the British had come into possession the military Governor declared at a moment's notice all German currency notes to be of no value for exchange purposes thus putting them with one stroke of the pen out of circulation. They were saved up by the Indian merchants and remained in their cash boxes and safes unused with the one hope that when the war was over this arbitrary order would be rescinded and they would get a certain value for them. But year after year has gone by, appeal after appeal has been made but nothing has come of these. The currency notes still remain so much waste paper and no compensation has been given for them.

There have been a hundred acts of discrimination appearing to show that in the end—Mandate or no Mandate—the white man is going to get everything possible into his own possession. There are Tanganyika highlands as well as Kenya highlands and in spite of India being one of the original signatories of the League of Nations, and therefore entitled to the same treatment as every other signatory nation it is evident that these highlands will be reserved for white people only. So the story runs on.

In the end, after witnessing the treatment of the Druses in the French Mandate of Syria and the treatment of the Indians and other races in the British Mandate of Tanganyika, there will be very little belief left by the weaker nations in the honesty of the contracting Powers. The only belief will be that they will always contract for themselves.

From an Unpublished Wilson Conversation

The London *Morning Post* publishes extracts from an unpublished Wilson conversation, from which we take the following:—

"Speaking of closer relations between Great Britain and the United States, the President said—'You must not speak of us who come over here as cousins, still less as brothers. We are neither, neither must you think of us as Anglo-Saxons for that term can no longer be rightly applied to the

people of the United States. Nor must too much importance in this connection be attached to the fact that English is our common language.

The English language is a disadvantage to us as well as an advantage because we can read in your books and newspapers what you say about us. For instance, it should not be said of us that we are building ship for ship against you. With French and German it is different, because much of what the French and Germans write does not reach the people, so less harm is done.

No there are only two things which can establish and maintain closer relations between your country and mine. They are community of ideals and of interests.

If I know anything of people it is of the people of the United States. They cannot be said to be anti-British but they are certainly not pro-British. If they are pro-anything it is pro-France.

I will not say that future wars are improbable, but what I have said is that if before the present war the situation had been freely discussed in public far even a week this war would never have broken out.

I have promised to make public everything discussed at the Peace Conference. If I find anything going on in an underhand way I will publish it. This is the first time the people have ever had an opportunity of taking any share in a settlement of this sort and they shall not be balked.

I have come to Europe to do the little I can but I am under no delusion. Without the assistance of Divine Providence no man can effect anything which is fasting anything which is great no man of intelligence can deny the existence of a Divine Providence.

The East India Company's Indian Spies

The Indian of London states —

ENGLAND'S SPIES IN INDIA

The Indian Historical Research Association of Poona has published in its latest quarterly journal three old letters of the early days of the East India Company from Clive to Carnarvon. It shows how the Company has spread its network of spies through Indian and other banking and business concerns, not only in India itself but throughout the Far and Near East as well. One big firm of Jam merchants, Hutch Batcha Gupras, was acting on their behalf in Western India, Kabul, Kandahar, Herat, Persia, Northern India, Bengal and even South India.

One letter quoted is from Jent (after Sir) Alexander Burns who says: "Mahut Chand Balcha sends us information from Kabul, Kandahar, Samar, Kand, Herat and other places, watching with oil in their eyes the movements of the Asiatic peoples. All wars, peace treaties, military arrangements, etc., being absolutely dependent on their information the British Government is very deeply indebted to them. This firm is very loyal and reliable to the British. Its information is always found reliable, and we can safely act on it. The only way we can repay it is by protecting this family and the religion to which it belongs."

HOW GWALIOR FORT WAS CAPTURED

How Popham captured the almost impregnable hillfort of Gwalior has been chronicled by him in a letter which says, "We would never have captured the fort without the whole-hearted devotion of Maharajadhiraj Sawami Shikandra Rop-Chand Gupta. There was a secret door to the fort, which was discovered by Gupta after prolonged and secret inquiry and we were informed of it. We were able to get in and capture the fort without losing a soul."

"Asahi" of Japan

The "Asahi" of Tokyo and Osaka is the foremost newspaper of Japan. *The Japan Magazine* writes —

We quote below the impressions voiced by three distinguished foreign guests invited to inspect the building.

The British Ambassador, Sir John Tilley

"What struck me above everything else is that the Tokyo Asahi is provided with every sort of equipment of modern and most progressive type, efficient first in every department."

The German Ambassador, Dr. Soli

"When I entered the Asahi building which is magnificent and entirely of a new type, and saw its complete arrangements and up-to-date plant, I felt as if I were in a most advanced European or American country, and I was only awakened by the sight of the papers printed in Japanese characters. The Tokyo Asahi which is situated at the most important geographical point in Tokyo and is ready to enter upon a new period of activity is a symbol of Japan, which grasped the civilization of the past two centuries at one leap."

The Spanish Minister

"The grandness of the building, the fineness and completeness of its construction and the perfection of its system provided with every necessary department are really admirable. Once, at home, I visited a leading newspaper office but it cannot be spoken of in the same breath, regarding scale and equipment, with the Tokyo Asahi."

Tokyo and Osaka offices are connected by their own special telephone line, laid at a cost to them of about 300,000 yen.

They issue seven periodicals besides their respective dailies. These are the Weekly Asahi, the Asahi Graph (weekly), the Asahi Sports (semi-monthly), the Kinemas and Plays (monthly), the Children's Asahi (monthly), the Asahi Camera (monthly), and the Ladies (monthly).

Borobudur

Mr. Jao Poortenaar writes in *The Asiatic Review* —

Many legends in the folk lore of Java also remind us of Animism. The big gun I have just mentioned is one of a pair, its companion lies in the courtyard before the palace of the Sasuhuan of Surakarta, and supposed to be inhabited by a ghost, the "sapu jagad" or broom of the world,

which at a certain moment will vindicate that name by sweeping all infidels into the sea. What the venerated Prophet would say when he saw his followers kneeling and praying and offering to an old Dutch gun they do not for a moment consider, but it accounts for their charming and innate naivete. Another example which shows how strongly the native mind is imbued with pre-Mohammedan and pre-Hindu ideas and modes of thought we find in the general belief that the goddess of the South Sea will come and visit the Sasuhuan in the top room of a tower in the palace grounds. European visitors are only admitted a few stories high, the top of the building is holy, and must not be visited by anyone, least of all by infidels.

Near by are numerous ruins of Hindu temples and monuments, restored and carefully kept. The most famous is the large Borobudur, of which India furnished the prototype, but the style of which baffles comparison. The only building it can be likened to is the Taj Mahal at Agra but it surpasses this monument in delicate decoration. Intended as a reliquary the building should be regarded as a shrine most likely one of the 81,000 stupas consecrated to hold a portion of Buddha's remains after King Asoka had decided that no longer eight towns but the whole world, should share in their blessed possession. The structure is erected on the top of a hill, of the shape of which full advantage was taken, so as to form the angular terraces which constitute the main part of the monument. Three circular terraces are adorned with seventy-two bell-shaped chhatras each holding a life-size Buddha image, the lower parts showing in magnificent reliefs the story of his life. These galleries are, moreover, ornamented with hundreds of niches, in which also stand or rather sit, similar statues. Rising light and airy for all its grandeur the enormous monument expresses more strength than a mere massing together of ponderous material, huge walls and towers could have done. The sense of massive power is enhanced by its strange beauty of contour in perfect harmony with the brilliant landscape in which it is set. It is a crown, equal to the Enlightened One's urna.

And its spirit is still alive in the majestically striding Javanese, whether they be regents, princes, or carriers. But with all the refinement of ages of court life as a coveted flower, it is seen especially in the delicate gesture of the slender Javanese dancing-girl.

"Building the Soul of a People"

The following passages are taken from an article in *The World To-morrow* by Rufus M. Jones —

George Eliot in the Spanish Gypsy wrote these fine lines three-quarters of a century ago

"The greatest gift the hero leaves his race

Is to have been a hero. Say we fail! —

We feed the high tradition of the world

And leave our spirits in our children's breasts."

There are now and then personal lives of the type that raise the whole level of life for those

that come after them—lives whose spirit becomes evermore part of the necessary air men breathe.' It does not matter very much whether persons of that type succeed or fail in their own generation whether they win a crown or a cross—their real service is that of quickening kindling fusing their fellows and so of transmuting their own nobility of purpose and

Breathing a heauteous order that controls
With growing away the growing life of man
It seems to me that this is the greatest service that Mahatma Gandhi is rendering to India today. It is possible to count up an impressive list of real achievements which are due to his endeavors but overtopping all his specific contributions is the contribution of his life. The by-product which came unconsciously as often happens is more important than the definite product which he aimed to get. Gandhi's life is such an immense achievement, his spirit is such a tremendous contribution to the world that there will be an imperishable legacy from him whether his plans succeed or no.

The most important question to ask about a leader is to find out how far he has helped to create a nobler spirit in the hearts of his people how far he has been able to raise and inspire the souls of his contemporaries and successors. Gandhi stands this test in a very high degree. He is slowly building a new soul in India. He is one of the rare persons who are unconscious of personal interests unconcerned about what is coming to them. He comes as near as anyone I ever saw to a complete abolition of the ego-focus, the ego-complex. He is absorbed in a cause, he is lost in the movement which he leads and inspires. He calls his method non-violence but that is a very weak word for it. It is not a way, method, it is a way, method. It does not negate, it affirms. It is not the renunciation of the use of force, it is the discovery and the application of one of the greatest forces in the universe—the force of love of human understanding of unalloyed good will of heroic friendship of sympathetic co-operation in short the might of truth. Gandhi calls his entire life-work an experiment in truth. There is no better way to name it. And the greatest thing about his experiment will be its contribution to the new soul of India.

What we need at the present moment here in America is a massive contribution to the building of a new soul in our nation.

—

Origin of Indian Civilization

Professor J. Takakura writes in *The Young East* —

Where has Indian civilization originated? situated in the torrid zone and having the highest mountain ranges in the world together with a vast expanse of flat land, it is but natural that India derives inspirations from the depths of its mountains and Indian philosophers and thinkers seek the solace and recess of woods to indulge in meditation. It was thus from mountains and woods that Indian philosophy and civilization, education and religion have sprung up. In a country of high temperature like India, it is unbearable for

men to live in a crowded noisy and bustling city and though villages abound in the country as men instinctively like to live together Indians go into mountains for meditation and cultivation of character. In this way the theory that civilization rises from city life is not applicable to India. On the contrary in India it was life in woods that gave birth to civilization.

If as many scholars do Western civilization be called materialistic, how shall we call Indian civilization? It is certainly not materialistic as in points of materialism it is entirely lacking. It places no importance on form and shows no concrete evidence of itself. Nevertheless no civilization is so rich as Indian in spiritual elements. Accordingly perhaps it is best to call it spiritual civilization. In this regard Indian civilization is unique any other civilization would disappear if deprived of form or its expressions in tangible objects. Indian civilization however retains its vitality no matter if the country is in ruin for it is spiritual, untangible and indestructive.

Many Indians are no better than mendicants as far as their personal appearance goes. They are shabbily clad live from hand to mouth and know nothing about the present world and modern things. But spiritually they are found to be superior men. In conversing with some beggars I met with in an Himalayan mountain while in my journey in India I was astonished to find them philosophers and thinkers well-versed in the philosophy of Upanishads and the poetry of Vedas. Whence have you come? they asked me. From Japan I said in reply but they had no idea of what my reply meant. Where is it? they again asked. I was very much puzzled how to explain, for they did not know of sea. I said Behind us as you know a great mountain range stands. You cross it and find a country as large as India lying beyond it. You cross that vast country and come to a great river which is a hundred times bigger than the Ganges. Japan lies on its opposite shore. Is it a large country? No not so large it is an island country. Again they had no idea of what an island is and so they were not much enlightened by my explanation. In such a way they were as poor as children in regard to the affairs of the world but when our conversation turned to spiritual subjects they talked freely and fluently showing they were quite at home with philosophy metaphysics and religion.

Indians long for such spiritual civilization and live in a world of ideal. From the hoary ages of Vedas and Upanishads from the remote period of Gautama, up to the present time of Tagore, all through the centuries this spiritual civilization is found running in a continuous stream holding sway over the minds of the Indian people. Both Gandhi and Tagore are typical products of this civilization, the former an idealist reformer who aims at putting his ideals into effect, and the latter a poet of nature who dreams of idealizing realities. India is under foreign rule and the Indian people can show no dazzling evidence of material civilization but she retains her unique spiritual civilization which will survive though all other civilizations, such as the civilization of present-day Europe and America may decay. Beyond question India offers to the world a civilization which no thinker no philosopher no

religionist, no sociologist can do without trying to probe into and unlock its mysteries

The Buddha's Transcendental Experience

Archbishop M. T. Kirby observes in *The Young East* —

It is impossible for us to regard the Buddha as a mere teacher of the ethics. Had he been but a simple-hearted moralist He would not have attracted the disciples and lay followers that crowded around Him. The teaching of simple morality would not have appealed to them.

What then emanated from Him that drew all men to Him?

Mere ethics? Mere morality? Most certainly not.

In analysing the circumstances which finally led to the preaching of the Dharma we find the one-time Gotama enjoying a Great Bliss. He had discovered the source of pain and rebirth, and the karma that led to rebirth and through that discovery He had freed Himself for ever from their chains.

Briefly we may say He had entered into a Transcendental Consciousness and in its contact He had realised His True Nature His Essence.

Thus the secret of His magnetism and His Dharma lies in the fact that They were founded upon a transcendental experience. That They bear the hallmark of One who had identified Himself with the Truth He had realised Truly did He say of Himself. He that sees Me sees the Truth.

— He was the Truth personified. Gotama was dead the Truth was made flesh and dwelt among us.

What it is cannot be expressed in human terms and Buddhists maintain the noble silence of the wise regarding it. That it is needs no proof because it is that Something that has stamped the Dharma with its magnetism and which in turn is inviting the West and being accepted in the West as the Way the Truth and the Life.

Civilisation and Barbarism

Mr Sunkar A. Bisay the Hindu Inventor and Scientist writes in *East West* —

We are inclined to call ourselves civilized, but to my mind the difference between barbarism and civilization lies in the employment of physical force and deadly weapons in attempts to settle disputes. It is the difference between might and right, between physical strength and mental strength.

But there is something to be said for the so-called benighted savage barbarian. He at least fights his enemy face to face and with antiquated weapons according to his lights whereas modern civilized man fights at long range with weapons of terrible power that slay innocent men, women and children. As long as we resort to organized warfare we have no right to term ourselves civilized.

Ignorance of Buddhism in England

Says the editor of *Buddhism in England*

Some examples of the prevailing ignorance regarding Buddhism border on the humorous. When Miss Faulkner was endeavouring to find a hall for our Wesak Meeting last year she made enquiries as to whether a certain hall under the management of one of the Nonconformist Christian bodies would be let for the purpose. In reply to her letter of enquiry she was asked to call and interview the Secretary. She did so. This gentleman explained that the hall could be hired, but he would like to know more about the Buddhists as he had never heard of them before. When Miss Faulkner went on to explain that Buddhism was a non-Christian religion he said that that settled the matter; they would not even let the hall to Roman Catholics and certainly would not to non-Christians.

Another instance brought to our notice recently was that of an image of a Chinese deity exposed for sale in a London emporium labelled *Buddha the Chinese God of War*.

Social Income of the United Kingdom

The following paragraph and table relating to "social income in the United Kingdom taken from *International Labour Review* will be found instructive —

The most important figure is that of social income estimated to amount to £3,803 million for this is the amount really available for consumption or saving on the part of the residents of this country. The corresponding estimate for 1911 is £1,988 million or an increase from 1911 to 1924 of 95 per cent. In the following table the social income in 1911 and 1924 is expressed in relation to the total population the occupied population and the family.

Year	Total (Million £-s)	SOCIAL INCOME			Per family (£)
		Per head of population (£)	Per occupied person (£)		
1911	1988	40+2 ¹	101		200
1924	3803	84+2 ¹	185		365

What are the corresponding figures of social income in India?

The Economic Condition of China and India

Berliner Tageblatt a German Journal observes —

No one can predict China's political future in the midst of her present uncertainty and chaos but we can forecast her economic future with considerable assurance. Her independence move

¹ These figures are on a margin within which there is good reason to hold that the true value must fall.

ment, which in one form or another is sure eventually to succeed has definite economic objects. The first of these is to liberate the nation from foreign financial and commercial control to win complete tariff autonomy and to place the economic direction of the country entirely in the hands of its own people.

In India the course of events has been entirely different. The English have exported to India not only their manufactures but also their capital. The Railways of that country are not owned by natives they were built with British loans by British contractors from British materials. India's heavy indebtedness to Great Britain reveals itself to-day in her balance of trade. While Japan's exports and imports over a long period of years abnormal conditions have upset the equilibrium since the war—are about the same India has always exported much more than she has imported. She has been forced to do so in order to pay her annual interest bill to England. The English as the political and financial masters of the country have directed its development to their own advantage. They have, indeed tried to organize the country on a capitalist basis but without local manufactures. In fact, they have discouraged such manufactures by every means in their power. After destroying the native textile industry they did not for many years erect spinning mills in India itself but supplied that country with goods from Lancashire. It was not until shortly before the outbreak of the war that this situation began slowly to change and local factories were erected here and there. Naturally they grew rapidly during the war. Lancashire spinners are now feeling the result. They have not only lost many of their former customers in India but they realize that with her cheaper labour her favorable geographical situation and her local raw materials India may eventually drive them out of other Asiatic markets.

China is very rich in industrial raw materials. Many geologists believe that her coal resources are equal to those of all the rest of the world. After a period of transition therefore she will have brought her iron and steel industries to a point where she can supply her own machinery of production. When that is accomplished her trade with the United States, England, Japan and Germany will come to resuscitate closely the existing commerce between those four nations. But in view of China's vast territorial extent and enormous population the transitional period will doubtless be a long one. When it is ended the world will be the richer by a great new centre of production though the older industrial countries may have lost certain of their present markets.

"Encyclopaedia of the Social Sciences"

The New Republic states —

An interesting enterprise which now seems to be at last on the road to successful completion is the

Encyclopaedia of the Social Sciences" which is being prepared under the editorship of Professor Edwin R. A. Seligman of Columbia. It is to appear in a volume at a time until within about a decade the whole work comprising about 8,000,000 words has been published. It will cover history, economics, political science, sociology, anthropology, psychology, biology, ethics, education, aesthetics, religion and jurisprudence and is supported by a group of the leading learned societies in these fields. There has long been a demand for one comprehensive work which would not only discuss these topics but show their relationships. It is expected that this encyclopaedia will set a landmark in the history of the social sciences.

As there are some Indian scholars and authors who can speak with authority on some of the above mentioned subjects so far as they relate to India, we hope they will be requested to contribute articles to this Encyclopaedia.

'Biblos'

Biblos is a learned Portuguese review published by the University of Coimbra. It contains many learned papers. In the section called *Revistas* (reviews) the contents of reviews in many languages have been given. Among Indian Magazines the contents of *The Modern Review* (November 1926, to April, 1927) are mentioned in detail.

War Fables Taught in American Schools

Current History for August gives the place of honour to an article with the above caption by Lieut. Col. Thomas J. Dickson who served in the War in different important capacities. Says he —

There are 107 American school histories on file in the Congressional Library and National Bureau of Education. Not one has a correct account of the great troop movements and momentous situations of the World War. I know of no mitigating circumstances to plead in defense of those who have been guilty of making false, absurd and stupid statements in print and circulating them as American school histories. Space does not permit me to cite all the errors and comment on all these 107 school books. Ten have the virtue of practically not mentioning the World War. Silence is more precious than falsehood.

"MOTHER INDIA"

By ASHOKE CHATTERJEE, B.A. (Cantab.).

Editor, "Welfare"

IT is my intention to contradict in this article some gross falsehoods that an American woman, Miss Katherine Mayo has published in the form of a book, entitled "Mother India". She pretends that her book is a dispassionate study of India and Indians, but few have accepted this pretension at its face value. Most likely the book has been written under "stimulus" of which the source is to be found among some sections of Americans and Britons who do not like to see Hindus given American citizenship in America and self government in their own country. It is a low thing written with a low purpose. Strictly speaking, therefore one should no more exert to contradict such insulting lies about one's own country as the above book contains, than enter into a street brawl with one whose offensive armoury is entirely the tongue. But in this case one has to come down and soil one's fingers with the foul stuff served by Miss Mayo, for she is being given a lot of publicity by interested Anglo-Saxons and Yankees (which supports our contention that Miss Mayo is not after all an unworlly one hundred percent academical) which may serve to turn neutral nations against India at a period in her history when she needs all the sympathy of other nations that she can command.

A difficulty, however has to be faced right at the beginning. Although a previous volume by Miss Mayo ("The Isles of Fear" which was written with a view to lowering the Filipinos in the eyes of the world) was sent to many Indian papers for review, the present pack of lies has not been so liberally distributed to India. It cannot even be purchased here at the present moment. The result is that one has to launch one's counter-attack on the book entirely with the help of the reviews of the book that have appeared in the foreign Press. This may doubtless lead to some shooting off the mark and delivery of one or two unintentionally unfair blows. But considering Miss Mayo's vocation, one need not fear to be uncharitable to her, nor will it melt people's hearts to

see her prostrated under an onslaught not fully and solely guided by the principles of justice and fairplay.

I have read carefully a fair collection of Press cuttings in which Miss Mayo's book has been reviewed, appreciated, condemned or judged. A fair amount of public opinion in the shape of letters from various "pro bono publico's", "observers", 'Hindus' and "one who knows" has also received my attention. Having gone through all the above, I have come to believe that it is Miss Mayo's thesis that the Indians, the Hindus specially, belong to a very low level of culture and civilization, so low that they are almost sub human, and that their continued existence on the face of the earth constitutes a real menace to humanity, i. e. in the language of Mr Gokhale, "whiteman's". Miss Mayo, like a true-born American Co-ed, hangs on to her contention with that ruthless persistence which the normal mother woman exercises in hanging on to her husband. She loves her thesis and she must stick to it, come what may to truth, facts and figures.

A certain type of American is by nature a discoverer—not of ordinary puerile trifles but of things gigantic and untought of. Mothers who eat their babies for breakfast, trees that delight in doing the cake walk, whole nations gone mad, whole races given over to sexual perversion, etc. To make their discoveries, they would take the greatest trouble, even cross the sleeder borderland, that separates discovery from invention. Human frailties, limitations of science or logic or lack of what lesser men call evidence, would present no barriers to their far reaching intellect. Thus would a member of this species write a six volume treatise on the flora and fauna of a country by flying across it in an aeroplane or analyse people's virtues and vices by studying their 'reaction' to vaccination or some such important psychological test. Some years ago I had occasion to go through a book written by an eminent member of this clan. He was

writing about the Germans (a leisurely and post war production) He said in his book.

Scrutinized historically and presented baldly the German cannot be recognized as other than a pathological type. His mentality is not moral in the sense that the English or the American mentality may be moral. If we Anglo-Saxons are normal then something it does not appear where or how or what—has caused a psychological flaw in the evolution of this people or else there was a slip in the making of the German—something left out in his creation. Whichever it is whether accidental or genetical something is inherently amiss in his mental constitution.*

Here is a discoverer who makes a sweeping historical generalisation without lowering himself to the task of studying history, a master of group psychology who has probably passed not even a fortnight among Germans in Germany. He does not trouble to enquire what renders innocuous this terrible congenital and inherent abnormality of the German as soon as he takes American papers and swears by the Stars and Stripes. A very large number of Americans are of German extraction and one should naturally look for traces of German deficiencies among Americans also. But the author of the above book does not care to do so. He makes a bash of history, biology and what not and retires to collect the proceeds of the sale of his book with a truly American sagacity. In America we find a good example of what mere literacy without education leads to. It injures the Americans directly by investing a majority of that nation with an appalling mediocrity and shallowness unsurpassed by any thing in the whole history of human psychosis, and others indirectly as victims of these intellectual sorites. I beg humbly the pardon of those exceptional souls in the U. S. A. who write books on only such subjects as they have made a special study of. For them I have the greatest respect.

The above digression has been found necessary in order to put Miss Mayo in her proper place among American writers. One can readily see that she and similar American phenomena usually make a burlesque race of what they so humbly call studies in the social sciences, wilfully or due to lack of scientific training and detachment, and end up by making science a mockery and manufacturing arguments to suit their preformed convictions. It will not at all be difficult to show up Miss

Mayo's ignorance and fallacies where she dabbles with matter that belongs to the domain of scientific study, but where she discusses such subjects as Hindu impotency one has to surrender to her superior knowledge and experience and keep silent.

I have already said that I suspect Miss Mayo of collusion with British (and American) enemies of India and consider this book to be a fraud in so far as it assumes the robes of a dispassionate study of Indian society. My suspicions are strengthened by the fact that this philanthropic social hygiene monger devotes the major portion of her book to what would undoubtedly be recognised as refuting the arguments put forward by Indians in support of their claims to Political Freedom. Nobody can say that social reform or hygiene can be fostered by foreign domination. Far from it. It is just as much an accepted fact that slavery makes men lose their initiative and enthusiasm for self-improvement as it is that slave owners are far more interested in the profit-yielding capacity of their slaves than in their cultural and moral attributes. When imperialists break their hearts over the moral backwardness of the victims of their greed and proclaim to the four winds their deepest concern for the cultural advancement of their slaves, the average intellect receives the whole thing with a wink. So that when Miss Mayo pesters the attention of the world by her nauseating tales of sex, filth and excretion in order to drive home her contention which reads, "Indians must not get Political Freedom," every school boy guesses her true motive without the help of his teacher. Nevertheless let us weigh her accusations and see what they are worth. Her book has been described by *The New Statesman* as one of the most powerful defences of British *raj* that has ever been written. "Powerful fiddlesticks!" It should be described as inductive reasoning flying to the moon on the wings of a blue bottle. Miss Mayo holds.

1 Indians lead a sub grade of existence

2 India is a menace to the world as a breeding ground for disease

3 It is due to British protection that Indians live on the face of the earth or else they would have been wiped out.

The first charge is both true and false. Most Indians have been reduced to such economic degradation through 'British protection' that they live a life of compulsory

starvation without even the barest necessities in the way of housing and clothing. Let us force Miss Mayo and her compatriots to live on 30 or 50 rupees a year and see how much culture they exude after six months. I have seen some Anglo-Saxon slum dwellers. They would give the lowest of Indians any handicap and heat them in filthiness by a wide margin. No Indian will live in an unwashed shirt for a decade or so, nor take a bath only when shipwrecked. As to finer feelings, religion or anything like that, some of the Anglo-Saxon poor can well compete with the animals at the Zoo. I am forced to say these rude things, for Miss Mayo drives us to comparison. I do not say our people lead a very high life, — poor men, they are not in a position to do so, but why say *they* lead a sub-grade of existence when what really happens is that they are *made* to lead a life of suffering and want. Those Indians who can afford it lead a high enough life. May be their idea of a bath is not wading in a few gallons of tepid water but washing the whole body in running water. May be their wine bill is nil, their luxuries few, their food more natural than that consumed by Nero's Court or their habits a bit fastidious but that does not make it a sub-grade of existence. That is a sub-grade of existence which renders a man progressively degenerate in body and mind. What do we find in India to-day? Millions of forward looking and hopeful men and women who are fast improving in body and mind, staking their all on their life's major speculation: Political Freedom. These progressive men and women are the people on whom we should concentrate, not the hospital cases of Miss Mayo nor the criminals encountered by her Anglo-Indian Parsees or other friends who are jailors, lawyer's or liars. If we had been leading a sub-grade of existence, the British would not spend so much money and energy in counter-acting our efforts to attain *Swaraaj*, (including recourse to detention without trial). If we had all been degenerate, the British would not find so many healthy and energetic workers to run their government. Those Hindus who went and fought in France when some Anglo-Saxons were pleading conscientious objection to being courageous, were not degenerates either. Those who did pioneer work in Africa so that white men may later on swindle them were also fair samples of manhood. There are thousands of Hindu workers in America who are earning

the love and respect of their American competitors and employers* for efficiency, integrity and high morals. Miss Mayo could have interviewed some of them instead of going to the India Office for instruction. This so called sub-grade of existence vanishes as soon as Indians find sufficient means to improve the "grade" of their existence. Poverty and ignorance are its causes and in so far as poverty is removable it is also open to improvement. And it has no more to do with raciality or civilization than poverty or ignorance has. The ideals of a better life are there, it only requires means to realise it in the life of the masses of India.

What is responsible for our poverty? What has destroyed the balance of our economic life by destroying our industries by foul means? What again has made ever-bleeding wounds on our social body by exploitation, mis-called development and trade? Hindu Religion or Anglo-Saxon Irreligion? We have not been poor and starving always. Our traditions, our ideas of good living, our wealth of temples, tombs and treasures, marvels of the architect's, the sculptor's, the lapidist's, the weaver's and the painter's arts, testify to our past prosperity. It was the lure of our gold, and not the urge of Christianity that brought the Anglo-Saxons here. And our present poverty is the result of their "protection". This poverty will not be removed or even lessened so long as our present rulers get a free hand to squander our national wealth in the name of Military, Railway or Home charges, to pay interest on money that was seldom spent for our benefit and probably was not borrowed at the lowest available rate. What does this woman, who knows so much of venereal ailments and sexual perversion know of the economic history and structure of the nation she has been commissioned (by God?) to slander? Coming from a nation of cold-blooded and deeply analytical economists as she does, what is the consideration for which, she wages this semi-sentimental war against India's just claims? Instead of looking for the real causes of India's present degeneration in certain spheres, causes that will stand the test of science and logic, why does she ascribe it to our culture, civilisation, race, religion or philosophy (without

* Read Dr. Rajani K. Das's book, "Hindustani Workers on the Pacific Coast."

knowing anything about them, of course)? She might just as well have explained our poverty, high death rate and low percentage of educated persons by saying that these were due to a curse laid on our nation by an angry witch or an offended christian god. That would have caused even more sensation in New York.

India is accused of being a breeding ground for diseases and, as such a menace to the world. Well, it is not true. Most of our countrymen die of diseases that cannot be communicated to well-fed Americans. Our Malaria, the greatest killer, is really malnutrition. Our infant mortality is really due to poverty. There is a direct relation between infant mortality and poverty. The same is true of respiratory diseases, also of Plague, Small-pox and Cholera are indirectly fostered by over crowding, bad and insufficient food and dirt. These are the natural manifestations of poverty.

And what has made India so poor? Anglo-Saxon unscrupulousness, treachery, greed and exploitation of Hindu social customs and speculative philosophy? History will answer the question. It was that race of supermen, the progeny of the murderous marauders of the sea, who today worship Jesus as they worshipped Odin and Thor yesterday, that have stricken the fairest lands of the southern seas with the curse of their soulless greed. Hindu philosophy and Hindu speculative thought are things too high and complex for the *bannas* and *gladiators* of the West to comprehend. They are hazy and meaningless to the shopkeepers who criticise things beyond the reach of their shop-walking intellect in the columns of the *New Statesman*. Thus might a London Coster find fault with Wagner's orchestration. The Hindus were comprehensive thinkers and all-round men. Alongside of their speculative philosophy would be found their positive sciences or *shastras*. The achievement of the Hindus in the fields of Astronomy, Mathematics, Logic and Grammar, in Economics, Medicine, Chemistry and the Physical Sciences, in Navigation, Ship building, Architecture, Sculpture, Weaving, Painting, Decoration, the Lapidary's Art, Town planning, Banking and Finance and the Military Arts, has been marvellous for the times. The downfall of the Mohammedan Empire in India was the work of Hindus and not of the covetous traders of the West who later on occupied India by a prolonged practice of duplicity, treachery and by

employing the lowest of means. Talk of higher culture or ideas, purer instincts or finer sentiments from Miss Mayo's hundred sounds like a Ghoul reciting the Psalms of David. Let us quote a few verses from the Epic of Anglo-Saxon expansion with special reference to India and the East. I have said that our greatest sin is our poverty which is a gift from the Anglo Saxon saviours of the world. From the following quotation we get an idea of how the British have driven the Indians to the farthest point of misery by ruthless taxation.

'Lord Mayo says plainly in his minutes and despatches, that the burthen of Imperial taxation has increased is increasing and ought to be diminished. In 1859 the total expenditure amounted to £33, 378,026 and that for 1870 was £507,832,412 or an increase of more than seventeen million sterling. Meanwhile, what is the condition of the mass of the people? By the confession of the latest authority, they are reduced to the lowest point at which existence can be maintained. . . . Not five years ago, six hundred thousand persons perished of starvation within three hundred miles of Anglo-India.'

Today the expenditure of the central government alone exceeds 130 crores of rupees (about £100,000,000). Add to it the proceeds of the Land revenue, the Excise, Forests, Stamps and miscellaneous duties which comprise provincial receipts and the immensity of the burden becomes fully manifest.

Horbert Spencer says —

The Anglo-Indians of the last century 'birds of prey and passage,' as they were styled by Burke showed themselves only a shade less cruel than their prototypes of Peru and Mexico. Imagine how black must have been their deeds, when even the Directors of the Company admitted that the vast fortunes acquired in the inland trade have been obtained by a scene of the most tyrannical and oppressive conduct that was ever known in any age or country. Conceive the atrocious state of society described by Vansittart, who tells us that the English compelled the natives to buy or sell at just what rates they pleased on pain of flogging or confinement. A cold blooded treachery was the established policy of the authorities. Princes were betrayed into war with each other, and one of them having been helped to overcome his antagonist was then himself dethroned for some alleged misdemeanour. Always some mulchd stream was at hand as a pretext for the official wolves. Down to our own day are continued the grievous salt monopoly, and the pitiless taxation that wrings from the poor ryots nearly half the produce of the soil.'

Then comes Burke with his tribute to the great people who "protect" India from disappearing from the face of the globe. He said

Young magistrates who undertake the Government and Spoliation of India, animated with all the avarice of aye and all the impetuosity of youth, they roll in one after another wave after wave and there is nothing before the eyes of the natives but an endless, hopeless prospect of new flights of birds of prey and passage with appetite renewing for a lood that is continually wasting.

Sir Charles Dilke wrote —

There is too much fear that the English unless held in check exhibit a singularly strong disposition towards cruelty wherever they have a weak enemy to meet. In Madras roads, for instance I saw a fruit-seller hand up some limes to a lower deck port just as we were weighing anchor. Three Anglo-Indians asked in chorus, How much? One quarter rupee. Too much. And without more ado, paying nothing they pelted the man with his own limes, of which he lost more than half. It is in India, when listening to a most-table conversation on the subject of looting that we begin to remember our descent from Scandinavian sea-king robbers. Centuries of education has not purified the blood nor men in India can hardly set eyes upon a native prince or a Hindu palace before they cry, What a place to break up? What a fellow to loot! When I said to an officer who had been stationed at Decroile in the early days of the Mutiny I suppose you were afraid that the Benares people would have attacked you his answer was, Well, for my part, I rather hoped they would, because then we should have thrashed them and looted the city. It had been looted for two hundred years.

Thus began the process of impoverishing the Indians whose cumulative effect to day enables the uncharitable and ignorant tools of India's enemies to refer to Indian life as a sub-grade of existence and to India as a breeding ground for disease. About twenty years ago the Rev Dr. Aked said in the course of a lecture delivered in England

Famine in India was chronic and things were going from bad to worse. In the first quarter of the nineteenth century there were five famines with a million deaths in the second quarter two famines, with half a million deaths and in the third quarter six famines, with five million deaths. The average income told the same tale. India had retrograded materially and the simple fact was that the longer our rule continued the worse the condition of things became."

In the ten years ending in 1905 nearly four million people had died of Plague in India. In the nineteenth century over 32 million people had died in India of famine.

These are striking tributes to the "British Protection" of India which began with such deeds of inhuman cruelty and plunder. Will Miss Mayo recommend its continuation as a means to attain health, strength and prosperity? But of course, we are expected by Miss Mayo and her friends to be exterminated by invaders if and as soon as the British leave us. India has experienced many invasions, some by worse barbarians than the modern European imperialists, yet the Indian people have come through alive every time. Just before the British came to India the Hindus were reasserting political power in India. That they were enslaved again was not due to their deficient social system, child marriage or sexual appetite. It was partly due to their lack of any national sense partly to the fact that the British came at a time when the Empire of the Moguls was breaking up into numerous disunited small kingdoms which the British could easily play off against one another, and largely to the superior weapons and devilry of the invading people, who came in the guise of friends. The History of British occupation of India is a long catalogue of traitorous and shameful deeds and there are many authoritative books by eminent white men which if studied may serve as a revelation to open minded people. When the British got into power "then in the words of Lord Macaulay (Hist. Essay Vol. III) "was seen what we believe to be the most frightful of all spectacles, the strength of civilisation without its mercy. Tyranny of the most blood curdling sort, frightfulness that would quail the heart of an Assyrian hypocrite reeking with the stench of a well-nigh pathological greed crowd the pages of this history. Let all dispassionate persons study the true story of European domination of India and judge Katherine Mayo's pointless attack on India's socio-religious life as the cause of her present degradation, and evaluate her stage tears over suffering Indian womanhood thereafter. As to fears of extermination—we hope to defend ourselves without British bayonets, for British bayonets do not defend us now, any more than the Turks were kept back at Mesopotamia by the Americans. One of the supporters of Miss Mayo writes in

"*The Rise of the Christian Power in India" by Major B. D. Basu is a five volume treatise which can be considered to be a good compendium of books, essays, reports etc., relating to this period of Indian History.

* Greater Britain 5th edition pp. 44-7

† Quoted in the Prabhu 1313 B. E. P.

The New Statesman to the effect that if the British withdrew their army from the N-W frontier all the failed B A s' of the nationalist agitation would have their throats cut within a week or so." So would also all the conservative and so called liberal M Ps if they tried to fight their own battle against the French, the Germans or even the Portuguese. Just as they hire stalwart fools to fight for them, so could the B A s also keep an Army of intelligent Jats, Sikhs, Gurkhas, Maharrattas, Moplahs, Namasudras, Pathans, Parahiyas etc., to present arms to any number of cross hatched map readers. It should, however, be noted that there are a good number of B As in Madras Bombay, Calcutta or Lahore who are well able to become officers in naval air or field forces and manipulate the machines which are now a days used for the destruction of human life. In this I am certain they would not be beaten by the average Englishman or American provided their machinery, instruments and explosives are of good quality. The latter too could be manufactured with a little effort in this country. So that Miss Mayo as well as C S (A reviewer to the *New Statesman* who out Herodotus Herod in the course of her appreciative comments on Miss Mayo's book. Is the reviewer Miss Cornelia Sorabji by any chance? I may be wrong for I see that the reviewer has attempted to suggest to the readers many times that he or she is English) may well assure themselves that even if we got Swaraj we would still continue to provoke their "righteous" indignation by our frailties so long as they last us.

The next series of charges against us comprise lack of culture, sexual perversity, violation of habits venereal diseases, cruelty to animals, drinking filthy water, hyper-sexuality, impotency, eating cow dung, using the same as the mainstay of a system of medicine etc., etc.

While admitting that such things can be found in India if searched for with assiduity, I must point out that such abnormalities are not by any means representative and essential facts of Indian life and civilisation. India is a vast country with a very long history. Numerous institutions have originated, flourished and decayed in the soil of this ancient country. Whereas a *peritenu* can easily acquire only such manners and habits from books of etiquette as would find him a place in society, the man who has a little

"ancestry" is often burdened with a lot of tradition, fads, mannerisms and idiosyncrasies, all of which may not prove to be 'assets' of life. Similarly an ancient nation will necessarily carry along with its tradition, idealism glory of past achievement and culture a lot of wreckage dead and dying institutions, thought perverted into superstition and conduct based on thoughtless habit. India is such a country and if one looks for evil here one will find it. But there is more of good in this country, the evil is on the wane, in spite of British Protection, known as the policy of non-intervention. We are not supporters of caste distinctions child-marriage, enforced widowhood or unhygienic habits. These have done a lot of harm to India in the past and are still doing much harm, although they are doomed institutions. But there had been social reformers in India before William the Conqueror taught the British to speak in French and to think coherently and there had been more of them afterwards. The Present reform movement began before Waterloo and to day there are millions and millions of Indians who are well on the way to realise their ideals of social parity and excellence. The Indians have achieved this without the help of those greedy hypocrites who come here hiding their low nature behind pious pretensions shedding crocodile tears over their own misdeeds. For them we have only one advice NO HAWKERS 'No more thieves must sneak into our country pretending to peddle either religiosity or social hygiene. Our further advice is 'physician heal thyself' There are millions of well clad savages in Europe whom a little culture will do no end of good. There are more of them in America. A study of Havelock Ellis or Von Krafft-Ebing will reveal how for sheer variety sexual perversion in the West has a world of its own, where we can show only a few common gardea species. The profusion of pornographic literature and indecent places of amusement in Euro America rouse in us a natural suspicion that the demand for such things is probably commensurate with the supply. The statistics relating to the prevalence of venereal diseases in Western countries are also illuminating. Pigeon shooting, fox-hunting, vivisection etc., are not organised by the S P C A. Nor are the poor girl-workers in the big cities of the West, who are forced to supplement their starvation wages by selling their bodies nightly to the idle debauches, volunteers to the Feminist

cause There are people in the West who drink no water, filthy or clean, but fuddle them elves with drink and drugs, men who embrace vice not because of ignorance or poverty, but consciously in order to drag their hectic existence to its logical and evil extreme Western girls seldom bear children at an immature age through marriage, but, judging by the crowded foundling homes, statistics of hospital cases and confessions here and there, one cannot say that none of them ever get into trouble at an early age. So that there are baby violators' also in the West. Not violators of baby wires, but of baby mistresses. The statistics showing the age of venereally affected persons also point the same way. My question is, if Miss Mayo had so much to do at home why did she then go out of her way to emacipate the poor Hindus? What was her attraction?

Now let us go through some facts and figures in order to put to the test the contentions of this sanctimonious woman. The contentions must be tested from both an absolute and a relative standpoint. Are we guilty at all? Are we so guilty as we are painted? Are we more guilty than is due to the average frailties of man? I may not be able to find perfect answers to the above but my hope is that others will do so later on.

Are we devoid of all culture? It is no doubt true that compared to the teeming millions that live on the soil of India the number of really cultured men and women is rather small. But true culture in all countries is found only in the few. As a matter of fact culture is merely a name given to the thoughts feelings and conduct of the best element in a nation. With proper arrangements for education and provision of necessary material means, culture or at least a semblance of it can be imbibed by a larger proportion of a nation. All men are born uncultured and their nurture determines their future mental and physical development. How much the quality of this nurture depends on economic means need hardly be explained to intelligent people. Men who are provided with no education, have not even sufficient means for one square meal a day, who seldom get an opportunity to see or experience the beautiful and good things of life and never go beyond the narrow limits of a cramped existence in which there are only suffering,

slavery, insults and tyranny, can hardly be expected to cultivate cultured ways of living and thinking. The fact that inspite of what they have been reduced to by nearly two hundred years of organized exploitation, the Indians even now think of God, religion, duty, good and evil, charity, chastity, loyalty, hospitality and other virtues are thrilled by the religious dramas and attracted by classical literature and music shows that they possess a basic and deep rooted culture which needs no outward trappings to prove its existence. Ability to read printed signs to put on complex clothing or to travel by underground or elevated railways do not constitute culture. If culture has anything to do with man's mind, the Indian masses are cultured inspite of their lack of ideas of hygiene sanitation and dietetics. What is more, they are nearer the highest thought of humanity than the American workmen are to the thought of Emerson or William James. So that where we are beaten by the West are only in those aspects of culture in which the hoarding of material wealth is an essential. There are also deficiencies caused by lack of education discipline and hopefulness. These are closely related to wealth and liberty. What we have however prove at least that we are not inherently vicious or incapable of further cultural development. If only the literate were counted in India even then we could show well over *twenty five million* of such people. Those who know English can also be counted in millions. Miss Mayo has pounced upon a few persons here and there who have unclean habits to condemn a whole nation. It may also be pointed out that many of these cases merely show a temporary want of ability to fit in with new conditions of life and the younger generations are already getting used to city life and are rapidly mastering the tricks of modern civilisation.

It is not my intention to belittle the material achievements of the Western people, but I only request our Western friends to remember that sanitary fittings alone cannot make a civilisation, science alone cannot give man his perfection. It is all very easy for ignorant and misinformed people to rave against Hindu thought but those that have taken the trouble to study it, have seldom thrown it overboard. The world has yet a long way to go. It is foolish for those who are an inch or two in advance here and

there to turn up their noses at those who are a couple of inches behind. The little mechanical tricks the knowledge of which make our Western friends feel so superior have been learnt in a few decades by the Japanese. It will be the same in other countries though some may be hampered for a time by political dependence.

Indians have been charged with sexual perversity and been called baby violators. The Indian masses as everybody is aware generally marry soon after attaining maturity and sometimes before that. Married life seldom fosters sexual perversity and if early marriage in itself is not a perversity Indians can be considered to be eminently free from such vice. The lower one goes in the social strata the more true will one find the above statement. As a matter of fact some of the primitive races of the East never knew any perversion till they were contaminated by more civilised people. As Mr E. H. Manfrés Chief Commissioner of the Andaman and Nicobar Islands wrote nearly half a century ago *

Intercourse with Europeans and other foreigners has, it must be confessed, unhappily opened their (the Andamanese) eyes to the existence of some vices of which they had formerly no knowledge notably is this the case with regard to drunkenness, abduction, rape, seduction, unnatural offences, which appear never to have been committed among them.

The Indian masses lead a more or less quiet and colourless life, perversity is the product of high nervous tension, idleness and unearned wealth. Few Indians live a hectic life or have money or leisure enough to indulge in sexual perversity. Most of them are also forced by custom to live away from their wives eighteen hours out of the twenty-four so that all Miss Mayo's talk of sexual excesses are nothing short of of unmitigated lies concocted either by herself or by her Anglo-Indian, Parsee or other friends. Cases of some amount of perversion and excess are normal to all human races. For instance let us see what America herself can show in this respect. Lajpat Rai tells us in his admirable book *The United States of America*.

* The double standard of morals as applied to men and women in one of the most hotly debated

questions of the day. The tremendous prevalence of venereal disease among men the Privilege of men who insist that their present and future wives should be blameless in their moral character while they reserve for themselves almost untrained freedom and never hesitate to stain the lives and bodies of their wives and children with disease the ruthless economic exploitation in industries which forces so many women down into a life of shame all these questions agitate deeply the woman of America to day organised womanhood and single workers are trying their best to stem the tide of degeneration and to ameliorate or eradicate the outer and preventable causes which in the ultimate lead fellow women into the under world. America does not publish its deepest shame in tangible numbers and it is not possible to know how many women lead degenerate lives. But the reports of the Vice Commission which has extensively investigated the conditions of prostitution in Chicago give ample proof of the crying need for immediate attention to this problem. *Chicago alone is reported to require yearly 5000 new girls to satisfy the demands of prostitution in refilling the places of such as dropped out through death and disease. About 50 per cent of these girls are under seventeen hardly more than children.*

so that even in a country which produces such paragons of virtue as virgin Mayo herself there are millions of people with abnormal sexual appetite. What is more there are a sufficient number of baby violators in Chicago alone to violate 2000 new babies every year. Baby violators who do not sin ignorantly or thinking that there vile conduct is part of their religion but filthy minded perverts who plunge into the mire with all their burden of Anglo-Saxon morality and culture.

But are there too many child wives in India? Those that are make us to hang our heads in shame, but should we therefore let Miss Mayo's sweeping generalisations go unchallenged? Let us enquire into the facts. We take the following figures from the Census of India, 1921 vol I part I page 159

Year	Number unmarried Per mille, Males aged		Number unmarried Per mille, Females aged	
	10-15	15-20	5-10	10-15
1921	879	687	907	601
1911	866	675	891	555
1901	860	650	893	559
1891	841	621	874	491
1881	813	617		481

Commenting on the above the Report says the figures clearly show an increase in numbers of those in the early age-categories who are still unmarried. The movement is most marked in the Hindu Commu-

* *On the Aborigines of the Andaman Islands* by E. H. Manfrés C.I.E.
Journal of the Anthropological Institute of Great Britain and Ireland vol. XL, part I p. 112
London 1883

city but is shared by other religions. This means several things to Miss Mayo and her clan (1) That nearly 10 p c. of Indian males remain unmarried till they are out of the 15-20 age group (2) That over 60 p c. of girls cross the age-period 10-15 in an unmarried state (3) That since 1881 there has been marked progress towards better conditions in this respect and (4) that the Hindus Katharine Mayos *betes noires* are the most progressive in this field Where Miss Mayo found whole hospitalfuls of suffering girl wives whom their student husbands had mutilated and infected whole-sale God only knows! This woman seems to have been suffering when she wrote her book from some kind of complex which might have made her see sexual perversion even in the *Kutub Minar* A Freud alone could explain why a virtuous American spinster should be so obsessed with ideas of sexual and sadistic excesses as to suspect (expect?) a whole nation of such guilt

The above figures showing number of unmarried girls per thousand need a further explanation In India marrying off a girl before she attains puberty is supposed to be a virtue Marrying off does not however signify giving over to wifehood Girls seldom go to their husbands homes before two three or more years after marriage. But this idea of marrying off girls at an early age has led to the almost universal practice of understating a girls age when she is unmarried and in her teens. What is stated to be thirteen is generally fifteen and fourteen is often seventeen Hence the real state of affairs is, if anything better than what appears in the above table of figures. I do not suggest that things are in an ideal state in India but, my point is that where Miss Mayo charges us with criminality and demands our extermination we are generally speaking guilty mainly of violating the principles of eugenics, not babies. In the latter respect we are no worse than the Americans.

A few words about the relative rationality of Indians and Anglo-Saxons are here necessary to complete my contradiction of the inferior culture charge Indians believe in caste-differences untouchability drinking filthy holy water ghosts and spirits and in many other stupid things This is true of not all Indians for rationalistic heresy has always occupied a prominent place in Indian thought

since time immemorial. One can see this, to begin with in the *Pratyagya* who are almost mythical and then in the great pioneers of liberal and free thinking Buddha and Mahabir in ancient times, Ramananda Kabir Nanaka and Chaitanya in later times, and Rammohun Roy and Dayananda Sarasvati in modern times These men had and still have millions of followers and admirers in whom they inspired ideals of democracy equality virtue justice and fraternity never realised in practical life by any Western nation Miss Mayo should have studied the lives and achievements of Mother India's greatest sons before setting up a bowl over the few black sheep of the family she had seen or heard of Some Indians are superstitious and prejudice-ridden so are most Westerners If Indian Khansamas fear the attack of ghosts, or Hindu Brahmins refuse to dine with *sudras* or prefer the impure water of the holy Ganges to distilled water in the West many a Sir Arthur Conan Doyle infects the popular mind with talk of *poltergeist* tree spirits and ectoplasm Americans refuse to dine at the same table with Negroes and Mulattoes or even to worship at the same church or travel in the same car with them Upper class lower class blue blond and county blood are also terms invented by Anglo-Saxons to signify imaginary superiority of one kind or another There are also marriages of convenience (with dowries) *mesalliances* and left handed marriages in Europe and America in which latter country the mouths of oil tar or toilet paper kings water at the sight of a prospective son in law in the shape of an European duke marquis or count In St. Peters church in Rome one can see whole queues of irrational devotees kissing the foot of a marble god one after another while an attendant wipes the foot of the image every time with the *sa ie rag* Horrors of pyorrhoea and soft chancre! Those poor fools should have kissed a sterilised operation table instead and every kiss should have been followed by a shower of perma ganet of potash

Next we face venereal disease Venereal disease was originally introduced into the East by Europeans. Says Frederick Tice v p *

"The researches of Okamura and Sasaki for Japan and China and of Joly and others for India showed that syphilis did not exist in these countries until it was introduced from Europe

In the Indian system of medicine this disease is known as *Pheranga Roga* or *Feringhee disease*, which means European disease. Where Miss Mayo discovered that Indians were simply rotting away in their millions with syphilis and other venereal diseases we do not know. The fact is that in many cantonment towns and ports this disease is widely prevalent among some classes, but there are no grounds to say that such diseases are very wide spread in India or that they are spreading more and more.

The Encyclopaedia Britannica* says,

The figures collected by the British Royal Commission (on V. D.) indicate that the higher in the social strata one goes the more venereally stricken do the people become.

Which means that wealth begets these diseases. The reason is obvious. So that, Miss Mayo's charge of venereal affection made against a nation which is composed 95% of poor and simple souled people is *prima facie* absurd and false. Wealth and idleness have stricken the West with these diseases to a degree impossible of thought in India. The Encyclopaedia Britannica† also tells us that syphilitics compose nearly 20% of the United States population and that about 80% of Western men and women had suffered from venereal diseases before the War. Conditions have gone far more to the worse since the war. The war has probably also increased the number of

Indians who have suffered similarly, but exact figures cannot be obtained. There are however two ways in which we can come to some sort of an estimate indirectly. We had in Nelson's *Living Medicine** about sterility in women.

In a considerable proportion (some authorities place the figures very high) the condition (sterility) is a direct result of gonorrheal infection.

So that as gonorrhea is the most widespread of venereal diseases, a population of which a large number are infected with venereal diseases must show a large proportion of sterile women. As Miss Mayo herself and her supporters have been raging against the Indian habit of breeding and dying like flies and against all or most young women getting half a dozen offspring before passing their teens, their further accusation of Indians being largely diseased venereally breaks down on their own statements. Moreover, I have consulted an eminent physician and learnt from him that syphilis in a group of men and women always increases the number of the blind, the deaf mute and the insane among their progeny. So that if India is being progressively "syphilitised" like Europe or America, then the figure of blind, deaf mute and insane persons should show, accordingly, progressive increment. What is it we find in fact. The following table from the Census of India† will show us how we stand —

INFIRMITY	NUMBER AFFLICTED WITH RATIO PER HUNDRED THOUSAND OF THE POPULATION				
	1921	1911	1901	1891	1881
Insane	88,305	81,006	66,205	74,279	81,132
	28	26	23	27	35
Deaf Mutes	189,644	199,891	153,168	196,861	197,215
	60	64	52	75	86
Blinds	479,637	443,653	354,104	458,868	526,748
	152	142	121	167	229
Lepers	102,513	109,014	97,340	126,244	131,968
	32	35	33	46	57
TOTAL	860,099	833,644	670,817	856,252	937,063
	272	267	229	315	407

* Vol. 32 p. 300
† Vol. 32 p. 300

* Vol. VII p. 297
† Vol. I, Part I p. 205

The above does not show any progressive increase in these afflictions, rather we are led to believe that these figures point the opposite way. A progressive increase of venereal affection is not compatible with a fall in blindness, insanity and deaf mutism in forty years. In passing I also draw the reader's attention to the progressive fall in the number of lepers in India. I should also draw the attention of people to the valuable figures collected by the Student Welfare Committee of the Calcutta University. This committee have examined thousands of students and their findings controvert finally the base lies of Miss Mayo directed against our students whose wives one of her trusted friends "saw in a hospital suffering from foul diseases acquired from their husbands.

Our last words shall be about our alleged cruelty to animals and about the place of cow dung in Hindu Medicine. The latter charge can be dismissed at once, for no one who knows anything about the Aynredio system of medicine will waste his time over such idiocy as the accusation displays.

Then cruelty. All cruelty is reprehensible and we own up that we are cruel to our animals in some ways. But very few of us allow our old cows to be slowly eaten up by maggots or starve them to death. Old cattle are usually killed by kind hearted dealers in cow-hide. And one knows that cows must not die a natural death if they desire to be skinned for leather. Hence, I think that all this talk about starving to death and feeding the maggots with old animals is arrant nonsense. Our flourishing trade in hides proves it. Then compare our cruelty with the western variety. I shall not talk in details about roasting Negroes alive or about gassing whole army corps. Let us talk of animals only at first. Samuel Smiles in his work on *Duty* laments the "enormous amount of cruelty upon dumb animals,—upon birds, upon beasts, upon horses, upon all lives." (as practised in the West) He writes—

"In Italy birds are used for the amusement of children. The children do not understand that a beast or bird can be a fellow creature. When expostulated with, they answer—it is not a Christian!"

Let Miss Mayo face Mussolini with a denunciation of Italian culture, if she

dares. When Cashel Byron (Barnard Shaw, *Cashel Byron's Profession*) said in defence of his pugilistic cruelty, to her lady love

Who did I see here last Friday the most honoured of your guests? Why that Frenchman with gold spectacles. What do you think I was told when I asked what his little game was? Baking dogs in ovens to see how long a dog could live red hot!"

Was he referring to a Hindu practice? In the Elk tooth industry the European dealers used to catch the Elks when they were snowed up, pulled out their teeth and left them to starve slowly to death, surrounded by food which the poor animals could not eat. The history of the fur and feather industries would provide millions of instances of leaving animals to die slowly in traps which would probably be attended to once in many months. Birds were carried with their legs chopped off to prevent their flight. And so on and so forth. So much about cruelty to animals. Let us go a little into cruelty to humans. Lionel Curtis is a leading member of the imperial section of the Anglo-Saxon race. In his book *The Commonwealth of Nations* * he quotes some passages from the life of John Paton, a missionary. We find the following in one place

One morning three or four vessels entered our Harbour and cast anchor in Port Resurrection. The captains called on me and one of them with manifest delight exclaimed: We know how to bring down you proud, Tannese now! We'll humble them before you.

I answered, "Surely you don't mean to attack and destroy these poor people?"

He replied, not abashed but rejoicing "We have sent the measles to humble them! That kills them by the score! Four young men have been landed at different ports, all with measles and these will soon take their ranks. Our watchword is 'sweep these creatures away and let white men occupy the soil!'

Their malice was further illustrated thus. They induced Kapuka, a young chief to go off to one of their vessels promising him a present. Having got him on board they confined him in the hold, amongst Natives lying ill with measles."

Then after twenty four hours this innocent chief was put back on shore to carry the deadly (to these primitive people) measles to his kinsmen, who died "by the score!" It chills ones blood to read about such inhuman and fiendish cruelty. The whole history of the "white" races, from the

Sagas down to the history of the Great War is steeped in human blood. Then why accuse others of cruelty to animals? Western civilisation is tottering and the fear of a plunge back into barbarism

has gripped the heart of all thinking men. At such a time the sight of soft-brained western liars attempting to vilify others has a strange pathos which is three quarters tragedy and the rest unconscious humour

INDIAN SOCIAL REFORMERS AND INDIA'S POLITICAL AND ECONOMIC ENEMIES

By RAMANANDA CHATTERJEE

IN the lives of the saints of all religions, one may find some of the greatest of them accusing themselves of being the greatest sinners. But it would be wrong to take them at their word for that reason and conclude that they were the wickedest of men, though it would be right to infer that like other human beings they were far from being perfect morally and spiritually.

We do not at all mean to suggest or say that Indian or Hindu society is a brotherhood and sisterhood of saints. What we mean is that when Indian social reformers in their zeal for reform, born of love of their country, denounce some bad customs or some social evils, they are apt to indulge in superlatives and to speak in such an unqualified manner as to lead those who do not know to think that the customs prevail all over the country among all communities and classes, that there are no counteracting causes anywhere among any sections, that the customs in question therefore produce the greatest possible harm of all kinds, and that no improvement has been taking place gradually owing to the efforts made by previous generations of reformers and those that are living.

Take, for example, the custom of the purdah or the seclusion of women. Indians themselves without the help of their political enemies, perceived its injurious effect, and have been trying to do away with it as much as is necessary for the spiritual, moral, intellectual and physical welfare of society. But while admitting its evil effects, we ought not to give foreigners the impression that it prevails all over India among all classes of the people. All over India, it is far less strict among Hindus than among Muslims,

and even among the latter the women of the poorer classes in rural areas do not generally observe it. Among the Hindus of the Bombay and Madras Presidencies, including the Indian States situated therein, which comprise the whole of peninsular India, there is no purdah at all. In the Central Provinces and Central India there is no purdah among the Marathi-speaking Hindus. In Bombay a small advanced section of Muslims does not observe purdah. In the north and north-west, the purdah is not observed so strictly among the Hindus of the Punjab as elsewhere. In the Indian Christian communities, the Brahmin Samaj and the Arya Samaj, purdah is not observed. All over India women of the poorer classes of Hindus do not observe purdah. Women of all classes of Hindus, rich or poor, from the lowest to the highest castes, move about freely in all places of pilgrimage, which are large in number and scattered all over India, visiting and worshipping in the temples and shrines. Similarly in the sacred rivers of India, which are many, Hindu women of all castes and classes bathe without purdah, and they bathe frequently. It should be added that, when not ill, they bathe at home or in the nearest river or tank every day at least once.

Where and when purdah is observed, it is not exactly like imprisonment, though Westerners may disbelieve it. And, though these same superior persons may call us barbarians, we think some seclusion—not enforced seclusion, would do good to even accidental women.

Having stated in brief what purdah is like and what the extent of its prevalence is in India, we assert that even as it is, it is an injurious custom. But it is gradually

loosening its hold on orthodox Hindu society. At present in such a big town as Calcutta, where its injurious effects are most marked, there are numerous orthodox Hindu families who do not observe the purdah as they did before. Many orthodox Hindu ladies walk every evening to the Ladies' Park and some other parks in this city.

Other bad Indian customs might similarly be taken as examples, and the extent of their prevalence, the degree and extent of their harmfulness, and the velocity of their gradual disappearance described with as much accuracy as possible. But that would be to indulge in an unjustifiably long digression.

What we want to say is that, owing to the political capital which our enemies may make of what we say and write in condemnation of our injurious customs and habits, some of us may feel inclined to cease to condemn them publicly and even to defend them or minimise their injuriousness. We ought not to do that, whatever use our enemies may make of our speeches and writings. The good of our country is incomparably more important than the opinions of foreigners suffering from a superiority complex or interested in painting us blacker than we are. All that is necessary is that we should try to be exact in what we say and write, measuring praise and blame and weighing our words.

That social abuses and bad customs are partly responsible for our loss of political freedom cannot be denied. But no nation can argue that the existence of bad social customs in a country is a justification for enslaving it or keeping it in servitude. For, no nation, not even the politically freest, is socially perfect. There are great social evils even in the politically freest countries. But that would be no justification for some other nations to attempt to conquer them. Whether they can or cannot be conquered is another matter. When during or after the world war, some countries became or were made free, it was not after an international commission of sociologists, social scientists and philanthropists had pronounced a favorable verdict on their social systems and organizations and hygienic condition that they were allowed to be or remain free. Some countries in the east and south of Europe can compete very well with some countries of Asia in dirt and insanitation and the like. Eye-witnesses can bear witness to the fact.

We do not like the *tu quoque* style of

argument. That others are bad is no justification for us to be so. That others are bad does not prove that we are good. But our political enemies have compelled us to point out the social and other evils that exist among them and among other politically free nations only to show that if the existence of these evils among them has not deprived them of their right to be free, the existence of similar or other evils cannot justify our enslavement. So far as these latter stand in the way of our making a successful effort to be free, we are trying to get rid of them, and our political enemies are trying not to help us to get rid of them.

The abolition of child marriage and child-mortality and the raising of the age of consent within and outside marital relations would tend to make Indians a physically, intellectually and morally fitter nation. But British bureaucrats have all along been very unwilling to help Indian social reformers in effecting these reforms by direct and indirect legislation. They had no objection to abolish *suttee* probably because it was mainly a question of humanity,—the abolition of *suttee* was not expected to promote the building up of a stalwart nation. But the abolition of child marriage, etc. is indirectly and almost directly a political as well as a social remedy. So in these matters our British bureaucratic friends fall back upon the cant of neutrality and non-interference in religious and socio-religious matters. As if *suttee*, book swinging, etc., were not such things, which the British Government have stopped by legislation. British bureaucrats probably have another motive for falling back on the cant of religious neutrality and non-interference. They feel that they have almost completely lost their hold on the minds of the majority of the educated classes. So it would be natural for them to try to be popular with the illiterate and partially educated masses by pandering to, or at least by not interfering with, their superstitions and prejudices.

British bureaucratic mentality finds expression in passages like the following in the Census Report of India for 1911, Vol. I, p. 272.

Though the evils of child marriage are undoubted the subject is not one with which the British Government can exercise much direct interference. In two Native States, however bolder action has been taken.

This mentality continues in spite of the following admission made in the previous decennial Census Report of India (for 1901), Vol I p 434 —

Happily 'here is reason to believe that the leaders of Indian society are fully alive to the disastrous consequences both to the individual and the race which arise from premature cohabitation and are anxious to use their influence to defer the commencement of conjugal life until the wife has attained the full measure of physical maturity requisite to fit her for child bearing'

Twenty six years have passed since this was written. Yet the late Home Member of the Government of India declared that he would oppose Mr Har Bilas Sarda's very moderate Hindu child marriage Bill. It has to be seen whether his successor will carry out that threat.

Here may also be mentioned some of the ways in which the British Government is instrumental in keeping up caste divisions. In deeds to be registered, in plaints before law courts and other similar documents people have to state to what caste they belong. This is an unnecessary require-

ment. Recruitment for the army is encouraged among certain castes and discouraged or practically prohibited among others. In civil Government appointments in many provinces candidates from certain castes are discriminated against, whilst candidates from other castes are preferred.

We should go on with the work of social reform with unabated, or rather with increased zeal, not caring for what foreigners say. Social abuses and evils in foreign countries should engage our attention only so far as it may be necessary for us to mention them in order to warn our countrymen not to imitate what is bad in foreign countries or in order to refute the arguments of foreigners that, because of bad social customs in our country, we do not deserve to be politically free — the fact, on the contrary, being that we cannot make adequate social and moral progress without political freedom. Lastly, we should uproot the least traces of any feeling in our minds that the undesirable condition of society in any foreign country in any respect is any justification for a similar state of things in ours, or is a proof of our social excellence and superiority.

INDIANS ABROAD

A Letter from Fiji

We have received the following correspondence from Mr V Deo of Lautoka (Post Box No 17) Fiji:

Lautoka Fiji 21st June 1927

Sir

Believing that the Mother country is awakened after all to lend its sympathetic ear to the woes and trials of her children and grand children away from India, I venture to drop the following few lines for your favourable consideration.

The problem confronting the Indians in Fiji are very well known in India and therefore it is not necessary for me to redescribe it here. Suffice it to say that there are a few salient features that retard the general progress of the Indians in the Colony. The vestige of thralldom of indenture and the inherent slavish rule of the plantations are more or less still existent on the children of even third generation and will probably remain so for the generations to follow. Consequently there is the conspicuous lacking of the spirit of fearlessness and frankness which is the essence of all advocacy of the oppressed classes. Hence there are many

wrongs that exist today which could have been non-existent had our fellowmen been such of whom it could not have been said that they think one way say another and do a third.

The Colony of Fiji affords opportunity to the social welfare of the Indians here if only they rise to a sense of renaissance from within. All that is required I say again is the awakening from within. The crying need of the Indian problem is the necessity of trained social and political workers free from all tangles. A few Indian youths born in Fiji have endeavoured to do some spasmodic effort at public service but their usefulness is limited by the necessity of funds to carry out social and political service and by the lack of necessary literary qualifications to fit them for such service.

It is here I find that the Motherland can fill the gap by formulating some systematic scheme to enlist and train Fiji born youths as social volunteers. Will the Mother country act and at least share a little of its vast responsibility to her children abroad? We know that her home problem is imperative but her liberality shall not go amiss in stretching her motherly hand to her Fijian children. The Mother country will be discharging a sacred duty if it takes up the project at once of

training Fiji Indians as selfless workers of Truth and fearlessness.

There are a few patriotic youths in Fiji who would forsake all for the Indian cause if only given the opportunity to qualify for such service. I pledge myself to find the youths should the Mother land agree to train them and then all shall march side by side in the universal national renaissance. I conclude with the hope that Mother India stretch its helping hand to us.

V Deo

We hope there will be a response to this touching and earnest appeal.

Report of the Kenya Local Government

The above Report, which has recently come out, has roused in Kenya Indians a deep feeling of resentment due to the iniquitous recommendations which aim at rendering the Indians absolutely powerless in the Nairobi Municipal Council as well as in the Mombasa Municipality. Of the 18 members of the former 9 will be elected Europeans, 5 elected Indians, 1 Goan, 1 Government representative, 1 each from the Railway and the District Council. In Mombasa the story is repeated. On a minimum basis of 19 members, the Mombasa Municipality is to have 3 European officials, 5 nominated Europeans, 5 elected Europeans, 1 nominated Indian, 3 elected Indians, 1 Arab and 1 Goan. One can very well realise what a mockery of representation the above arrangement is. We wish our Kenya friends success in their fight against injustice and tyranny.

National Indian Teachers' Conference

The Indian *Views* is very caustic over the revelations made at the above conference. 73 per cent of the children of Natal Indians, who form a fairly well-to-do community, receive no kind of education. The *Indian Views* advises Natal Indians to stop boasting of the glories of ancient India and to begin to lay the foundation of the glory of future India by providing their children with education. There are plenty of unemployed graduates in India who can be exported to Natal with mutual benefit.

Hindi to be the Language of Fiji Indians

The *Tanganyika Opinion* publishes extracts from the report of the Fiji Education Commission of 1926 giving the reasons which induced the Commission to recommend the teaching of Hindi at all Primary Schools in Fiji. We reproduce a small portion of the extracts below.

Expert Indian opinion agreed that while it is true that Indians in Fiji come from different provinces in India and speak different languages, it is also true that life in Fiji during the past forty years has brought the people together and that Hindi has become the commonly understood language. It was however pointed out that the Hindi spoken in the Colony was not the Hindi of the educated class and of literature but was a debased form of language developed in the Bazar. Accordingly it was argued that a debased form of language was unsuitable for a school course. After very full consideration of the practical difficulties in the way of accepting the suggestions for the various Indian representatives your Commission is of opinion that Hindi should be the Indian Language mainly taught in the Primary schools.

Repatriation of Indians

The *Democrat* of Nairobi gives us the following —

The *Martinsburg* corresponded of our sixth avenue contemporary reports that over 400 Indians sailed on the ss 'Umzumbi' from Durban on the 6th instant in pursuance of the Union Government's voluntary repatriation scheme which forms a part of the agreement recently concluded between the two countries.

A New Scheme for South African Indians

The following is taken from the *Indian Views* —

Mr Bhawanilal Dayal (member of Dr Abdurahman's Deputation to India, who has since remained to that country) has opened a home for Indian emigrants in Bihar and leaves for South Africa on July 20.

He announces that he has arranged with some influential land owners of Bihar to purchase 33,000 acres in Kenya, where Indians who have returned from South Africa, and do not desire to remain there but are unable or unwilling to return to the Union can be settled.

Though the Round Table Agreement was very satisfactory especially as regards repatriation, he counsels Indians wherever possible to remain in South Africa—Reuters.

Propaganda against East African Indians

While Catherine Mayo, George Pilcher and Co are carrying on a malicious campaign of vilification against Indians in general, news have arrived of a similar campaign directed solely against Indians in East Africa. One Sir Sydney Hens M. P., is reported to have made a speech in London to the course of which he has said:

The Indians (in East Africa) are the chief traders of the area. They penetrated in any quantity to the interior only after the settlement of the country by the British. They had been made the tool of political agitators to India. His (Sir Sydney's) one complaint against them was as to

their low standard of morality, both personal and commercial especially the latter the educative effect of Indian standard of morality upon Natives was deplorable.

The *Democrat*, a Nairobi paper, duly makes mince-meat of Sir Sydney's false accusations

and proves how it was an accepted truth that Indian traders were extremely reliable, honest and fond of straight dealing. Their competition has unnerved the whites, who are making every effort to lower the Indians in the eye of the world

NOTES

"Mother India"

The world contains much that is ugly, much that is disgusting much that is destructive of health and life. Many things happen in this world which are cruel, ignoble, wicked, abominable. Yet those who believe in a Supreme Being associate with it all that is good, holy, pure, beautiful, wise and true. They would feel pained beyond expression if any sceptic or atheist were to associate with the name of God all that is ugly, disgusting, cruel, wicked, and ignoble, leaving out all that is pure, beautiful, beneficent and true though the wise among the lovers of God would not object to sceptics and atheists seriously challenging the believers in God to explain the co-existence of good and evil.

There are thousands of patriots in India who almost deify India and adore their Motherland. It is not that they ignore the existence of the evil and the ugly in their country. They only idealize their Motherland and hope to make the ideal the real by sacrifice, devotion, and strenuous endeavour.

They cannot but feel that Miss Katherine Mayo has been guilty of something approaching blasphemy in associating with India all the disgusting and wicked things she could find in the country or invent about it and then naming her book "Mother India," as if this part of the earth is not and has never been known for anything beneficent, beautiful and sublime as if the people of India are not and have never been known for doing anything that makes man godlike. Unprovoked malice or loathsome venality could go no farther.

Having done this sort of ghastly work for (or rather against) the Philippines she

turned her attention to India. Whose turn will it be next?

Miss Mayo an Anti-Indian Propagandist

We should be prepared to put up with the strongest and even the most uninformed condemnation of our past and present, if it came from genuine friends. But Miss Mayo's book has not been written to do good to India, but to convince the world that we are encephalosed people that we do not deserve to be free or even to live and that British rule in India is necessary and beneficent and should be perpetuated. If anybody wishes to do good to India, he should point out the faults of Indians to them alone or at least to them first of all or along with others, in any case, it is not the part of a friend to make arrangements for first of all making non-Indians acquainted with all that can be truly or falsely said against India, leaving the Indians themselves to find out their faults as best they can.

But this is exactly what Miss Mayo and her publishers have done. As far as we have been able to find out from Indian owned and Indian edited newspapers, not one of them has received "Mother India" for review, though Anglo-Indian editors have got it and reviewed it. It has been reviewed in America and Great Britain. We have not been able to purchase a copy in Calcutta. So well known a publicist as Mr K. Natarajan of Bombay could read the book only by the courtesy of a friend of his. One of our contributors has sent a review of the book from Germany. An Indian contributor of an Indian weekly has sent it a review of it from Switzerland. It can scarcely be considered accidental that

the book has become widely known all over the western world before those against whom it is written have been allowed to review it. So the simple plan has been to prejudice the world against us before allowing us to point out the inaccuracies and deliberate falsehoods which the book contains. Of course, even if the book had been sent to Indian editors along with other editors' Indian opinion on it could not have influenced the western world much, for Indian journals have a very small circulation in the West. Still the simultaneous despatch of the book for review to both Indian and non-Indian journals would have shown that the author and her publishers were prepared to face Indian criticism simultaneously with reaping the advantages of occidental praise and circulation in the West.

It cannot be contended that Miss Mayo and her publishers are not aware of the existence of Indian owned and Indian edited papers, for her work on the Philippines was sent to many of them, because, of course, they were not Filipinos!

Another fact which shows that Miss Mayo's book is part of anti-Indian propaganda is the use which British newspapers are making of it to oppose giving Indians political rights. For example *The Saturday Review* writes in the course of a leading article reviewing the book —

But the basic fact is that India is not socially fit for self-government. And her social evils are found in their worst forms among precisely those who would be given political power the Hindus, not among those more virtuous peoples who would challenge the power of the Brahmin oligarchy. Surely it is incumbent on this country to postpone political concession until social conditions improve until there is some guarantee that the new powers given to Indians will not be used to perpetuate the gross evils at which we have glanced. We must not betray India under pretext of giving her a political boon.

How absolutely ignorant or wilfully blind *The Saturday Review* is, is evident from its assumption that all Hindus are wanting in virility, as if the Jats, the Rajputs, the Dogras, the Gorkhas, the Garhwals, the Marathas, etc. were not Hindus. Mr K. Natarajan, editor of *The Indian Social Reformer* and of *The Indian Daily Mail* has ably exposed the sophistry of "The Saturday Review" in *The Indian Daily Mail* thus —

The hollow sophistry of this reasoning lies in the fact that British rule itself is a good deal responsible for hardening Hindu custom and neglecting and even resisting social legislation during

the last fifty years. Social reformers have come to realise that their work must remain unfruitful until a national government takes it courageously in hand consistent of the support of the Indian people. Indian States like Mysore and Baroda passed laws long ago against child marriages but the British Government of India has not moved its little finger directly to check the evil. *The Saturday Review* says political reform should not come before social reform. We say on the contrary, that no further progress in social reform is possible unless Indians are enlightened with a large measure of political initiative.

(Italics ours Ed., M.R.)

We write all this, because it has been claimed that the book is not a piece of pro-British and pro-Imperialist and anti-Indian propaganda. None but absolutely blind or dishonest partisans, or fools entirely devoid of intelligence can accept such a claim.

The First Lie in Miss Mayo's Book

Not having seen Miss Mayo's book yet, we cannot say how many lies it contains, nor point them out. But we find the following sentence in a review of it in *The Indian Social Reformer* —

The very second sentence of the very first chapter of her book speaks of many little bookstalls where narrow-chested anaemic, young Indian students in native dress brood over piles of fly blown Russian pamphlets."

The description of young Indian students as narrow-chested and anaemic need not detain us. What we are concerned with are "the piles of fly blown Russian pamphlets." "Pamphlet" means "This paper covered book usually containing essay on political or other current controversy." Russian pamphlets mean such books written in the Russian language and obtained from Russia, or such books written in English or some Indian language and sent from Russia. Now as very few, if any, Indian students know Russian the bookstall keepers would be egregious fools if they imported and kept for sale piles of pamphlets written in Russian. But supposing they were foolish enough to do so, why should Indian students ignorant of Russian brood over piles of such pamphlets? They may be narrow-chested and anaemic, but they are not absolutely wanting in intelligence.

Let us, however, suppose that Miss Mayo means that the pamphlets are written in English or in some Indian language and imported from Russia. Whatever the language of the pamphlets, Miss Mayo obviously in-

sinuates that they are the work of Bolshevik and communistic propaganda. But the Government of India have, under the Post Office and Sea Customs Acts, proscribed all such literature, and confiscate them wherever found. So, how could there be piles of such pamphlets openly exposed for sale in book-stalls? It is true, in spite of the vigilance of the officials concerned, a few proscribed pamphlets and leaflets find their way to some persons, including some who do not want them. But such copies would not make piles, nor would they be publicly kept for sale in bookstalls for flies to promenade and Indian students to brood over.

There are no bookstalls in Calcutta where piles of even non-political and non-socialistic Russian pamphlets are kept for sale.

The reason why this lie has found a prominent place in Miss Mayo's book is that Russia is England's and every other capitalistic country's bete noire, and the picture of Indian students poring over Russian pamphlets is calculated to make our young men objects of dislike and hatred to them.

As for Indian students being narrow-chested and anaemic, let us hear what *The Indian Social Reformer*, which is the principal social reform organ in India and is in its 37th year, says:—

'Unkind strangers often call the Bengali Babu plebeian but not anaemic. In her description of Bengali youth she is merely repeating the Anglo-Indian conception of political enthusiasts as decadents. As a matter of fact, Young Bengal since the days of the Partition has paid particular attention to its physical fitness—an example that is being followed all over the country.'

When pitted against British soldiers or civilians in India in manly games, Indian students do not generally come out second best,—they do sometimes come out with flying colours.

"The Eating of Words"

The Week, a Roman Catholic organ edited by Dr H. C. E. Zacharias, observes:—

The eating of words is an accomplishment, neither pleasant to perform nor to behold, but freely indulged in all the same probably under the mistaken idea that it 'saves face' to carry on as if one never had spoken nor acted in opposition to the attitude of the moment. Probably also, because it requires real greatness to admit as Mahatma Gandhi on a memorable occasion did, even a Himalayan mistake.

At the risk of *lese majeste* we would therefore almost conclude that our great contemporary in

Chowringhee really lacks greatness. The reason why we dare thus to speak of *The Statesman* is that, when on the 18th we read a leader therein called 'Mother India,' we had not yet forgotten a leader therein on the 2nd, called 'Mother India'. We read:

August 2nd

'It is a book that must have consequences. It is a terrible book which cannot be ignored. The central figure revealed in this eccentric world is the Hindu husband and above all the Brahmin. Truly this is a scathing, painful book revealing unimagined glimpses of human suffering and though Miss MAYO has generous words of praise for the record of Englishmen and women in India we think that the effect upon the British public will be a painful one. The authors give reasons why no English official or missionary could or would write such a book. There are few adjectives, no invective, no passion only a deadly accumulation of photographic and harrowing detail and she never quotes either Mr. GANDHI or a debate in the Legislative Assembly without a reference.'

August 18th

'It is plain that the book and its conclusion have not been swallowed wholesale by the more informed critics and that there are distinguished organs of public opinion that plead for a rational consideration of the case against India that is framed by the American writer. It reports from hospitals as to the mutilation of children in marriages that Miss MAYO has cited here to be accepted, we should show that these things are no more typical of general life in India than are hospital reports in any other country of the general life there. They are criminal offences here as elsewhere. In short there is another side to the picture that Miss MAYO gives her readers and it is not only desirable but essential that that other side should be presented to the world with authority.'

The Statesman of the 18th 'having adequately demolished *The Statesman* of the 2nd, we have no desire to do a work of supererogation in repeating what it has already done (on the 18th), especially as Miss Mayo's book has not yet reached us, although an advice has, that the publishers have forwarded it to us. When we receive it, it will in the ordinary way be reviewed in our columns.'

The reason why *The Statesman* had to eat its words appears to be that it printed some wicked and abominable lies uttered by one Mr. Pilcher against Hindu widows, against which there has been an outcry all over the country. There has been a similar condemnation of Miss Mayo's book also. All this may have made the Chowringhee paper envious about its sales and advertisements.

Miss Agnes Smedley's Article on Miss Mayo's Book

We have published Miss Smedley's article on Miss Mayo's book to show what impression it has produced on the mind of an unprejudiced foreigner about India. Miss Smedley's conclusions relating to India's social, cultural and spiritual condition might have been entirely correct, if Miss Mayo were capable of telling the *whole* truth and nothing but the truth about this country. She has been misled in some respects by her acceptance of Miss Mayo as an accurate observer and a truthful generalizer. Our remarks do not apply to the political part of the article.

League of Nations Propaganda

Since writing our note in the last issue on lessons in schools on the League of Nations we have come to learn that such lessons have been ordered to be given in Government and aided schools not only in the Presidency Division but all over Bengal. Probably similar orders have been passed all over India. We have known for a long time past that the League had passed resolutions in favour of giving instruction to young people in many countries on the work and aims of the League. We need not recapitulate the steps subsequently taken by various other bodies to give effect to these resolutions. *The Leader* says that the suggestion that the desired instruction should be given by connecting League teaching with existing studies in schools of all sorts, selecting history as central among such studies, has given rise to a heated controversy among British teachers and others interested in the education of boys and girls.

Professor J. L. Morrison has vehemently opposed the suggestion that to quote his own words a new compulsory propaganda should be launched on the country through our schools and his criticism is representative of the views of others who are opposed to the proposed League teaching in schools. He says that as a first proposition I would lay down that whether good or bad all forms of propaganda are to be discouraged and by propaganda I mean any form of intellectual solicitation which attempts to give plain facts more than their due weight and value and that our business whether as citizens or educators is to base our actions on honest and unemotional appreciation of facts as we see them in our rational moments. But the (League of Nations) Union and its educational supporters he says propose to employ the most dangerous and least legitimate of propagandist instruments, our schools. Even if the League of Nations Union had archangels as its missionaries and although its object is the noblest and most Christian motive I would still protest against the misuse of our educational system in pursuit of something else than truth taught in the spirit of truth. History he further says, is proposed as a chief instrument in the process when we begin to draw moral lessons, the danger is that we shape our history to suit our moral conclusions. Professor Morrison's criticism of the proposals contained in the teachers' memorandum might have stood if in England or in other countries of the world history had not been taught on nationalist lines but when for instance an English boy is told of the exploits of Clive and Warren Hastings in this country of natives, and has no idea of the high degree of civilization and culture attained by the people some League teaching should supply a necessary corrective should impart to young people a sympathetic knowledge of the people of other nations. But this will involve the re-writing of history to serve the larger and higher

end in view. And even if any kind of propagandist teaching is bad, why should League teaching, that is to say a knowledge of the constitution and works of the League, be any more propagandist than knowledge of the history and constitution of the Empire? And yet those who are opposed to League teaching are not opposed to Empire teaching. Indeed they fear if League teaching is given a place in the existing studies in schools Empire teaching will be neglected. People in England may not be knowing what Empire teaching sometimes means to people in the dependencies. Some time ago a committee was appointed by the Government of Burma to enquire how the Imperial idea may be inculcated and fostered in educational institutions. Among the recommendations made by the committee were that in all aided Anglo-vernacular high schools the superintendent or head master should be of British nationality, that in all Government Anglo-vernacular high schools the principals should eventually be officers in the Indian educational service, that the chairs in the Burma University connected with imperial studies, i.e. civics, geography and economics should for the most part be held by men of British descent.

We are entirely in favour of lessons inculcating good will and brotherhood among nations and the settlement of international disputes by arbitration. But we are against both Empire teaching and League teaching. We oppose League teaching because it is an organisation dominated by Imperialistic nations and cannot therefore consistently give effect to the high principles it professes. We would not have our boys and girls misled into the belief that the principal members of the League are at heart or in practice promoters of the cause of world brotherhood. Not being thought readers we cannot say what objects those men had in view who drafted the Covenant of the League. But giving every credit to them for good intentions we have not been able to discover how the League can or will help subject nations to be free thus establishing real world democracy and brotherhood.

Teaching School Children to be Hypocrites

The worst of Empire teaching—and League teaching—in India is that it practically makes our children hypocrites. They learn that books like *England's Work in India*, etc. and their Indian history books contain half truths and lies. Yet for passing examinations they have to repeat what the authors have written. Similarly about the League lessons, too they know that much falsehood and partial truth are being taught. But they

martyr to duty and a saviour of India. When it is said that Dyer saved India, it is, of course, meant that he prevented India from being lost to the British Empire. That is not saving India, but saving the British Empire. But even in that sense he did not save India, as there was no actual or projected rebellion far from saving India for the British Empire, the Jallianwala Bagh massacre which stands to his discredit roused feelings which would have led to India going out of the British Empire if Indians had a sufficiency of up to date arms and ammunition and competent warriors to lead them

Insult to Religion to be Made Specific Offence

Mr Crerar, the Home Member, has introduced a Bill to make it a specific offence intentionally to insult or attempt to insult religion or outrage or attempt to outrage the religious feelings of any class of His Majesty's subjects. That in spite of the conviction of the accused in the *Rasala Vartman* case such a bill has been introduced, shows that Mr Justice Dalip Singh was right in his view that the law as it stands cannot be made applicable to offences covered by Mr Crerar's bill.

We are against insults to any religion and to outraging religious feelings. But we do not like the new bill. The British bureaucracy in India should not as a general rule be armed with additional powers to punish people. They cannot be trusted to use such powers with impartiality and due discretion. All offences against good taste, ethics, etc., ought not to be made penal offences.

Besides, the line of demarcation between serious criticism and justifiable denunciation or satire or sarcasm and insult to religion cannot very often be drawn with unerring precision.

But as we have not learnt to bear and forbear, we must be kept to check by the whip of the foreign slave driver. The lampoonists and fanatics of different sects must consider that to be a great honour.

As for the administration of the proposed law, it is more likely than not that it would be more often enforced against those who are not turbulent or fanatical or comparatively

less turbulent or fanatical than against those who are more turbulent and fanatical.

The penalty proposed includes imprisonment up to two years with or without fine, which is unnecessarily severe.

In this connection *The Behar Herald* reminds the public that

Exactly eight years ago, there appeared in a missionary paper of Calcutta a letter from a Mahomedan correspondent making the vilest reference to the prophet of Islam. There was considerable feeling among Mahomedans, who moved Government to take action against the paper. It will be remembered that the Press Act was then in full force and consequently, the public was surprised when the Bengal Government came out with a communique which stated among other things that the publication of the letter would not justify action under the Press Act or under any other legal enactment.

MUCH WATER HAS FLOWED UNDER THE BRIDGES since then. In the Punjab several papers attacking Christianity were suppressed while missionary publications making the most shocking imputations against personages regarded as sacred by Hindus and Mahomedans were never touched. This immunity was the direct cause of the origin of literature of the type of the *Rangila Rasal* and the *Rasala Vartman*. The action now taken should not, however, be supposed to be the outcome of a general campaign against those who wounded the religious susceptibilities of other communities by traducing their prophets and saints. The point was forcibly brought home by the defence counsel in the *Rasala Vartman* case who pointed out the inconsistency of proceeding against one particular writing while other writings of a similar nature were condoned.

THE OBSERVATION MADE BY MR JUSTICE BROADWAY on this contention of the counsel was extremely significant. His Lordship said: "I can only conclude that action was not taken by Government in connection with the writings referred to by Mr Puri (counsel for the defence) viz., the *Journey from Delhi to Admadabad* (nowhere) and the *Un-awin Saddi ka Maha Rishi* because they were not considered by Government to have transgressed the law." This observation of the Judge could only mean that in his lordship's opinion the only justification for the inaction of Government in the matter was that they thought that the publications had not transgressed the law. The highly offensive character of these publications, however, was so palpable that the Punjab Government realising the awkwardness of the situation in which his lordship's remarks have placed them have come forward with an explanation which is far from convincing. With regard to the publication, *Journey from Delhi to Admadabad* the explanation says that it was printed in a paper published outside the Punjab and with regard to the other publication it only refers to the reply given by Sir John Maynard in reply to a question in the Punjab Legislative Council which in effect says that the publication of the pamphlet in September 1923 did not appear to have caused any general public feeling and no comment regarding it appeared to have been made in the Press till after the

institution of the proceedings against the author of the Rangila Rasul" in July 1921. There was a time when equity in England used to vary with the Lord Chancellor's foot. According to the Punjab Government, their own apathy or leniency must be the sole test of deciding whether a publication is offensive or not. Thickness of the hide which receives the blow and not the blow itself would be the determining factor.

Skeen Committee's Report

The Government of India appointed a Committee to report on the gradual Indianisation of the army. They chose the personnel of the Committee themselves, the chairman being Sir Andrew Skeen, the Chief of the General Staff, who knows as much about India's military needs and capacity as anybody else. The Committee made some recommendations unanimously. But even these the Government have been trying to shelve on various pretexts and excuses, the hollowness of which has been repeatedly exposed. In the recent debate on the subject in the Legislative Assembly the Indian members acquitted themselves quite well. The name of Mr K C Roy deserves special mention in this connection, as he, though a nominated member, made an outspoken speech which made the official benches very uncomfortable.

We should be highly pleased if good arguments and considerations of justice alone could avail to give Indians their rights as citizens. But unhappily that is not the case. If we want self-rule, the objection is raised that self-rule cannot be had without self defence. If we want to have the opportunity of self defence, we are told in effect that we cannot have it unless our social system, our educational system (for which England is entirely responsible), etc., become like those of England. Why not go the whole hog and say that the climate of India must be like the climate of England and the people become either thoroughly Anglicised (if possible) or commit suicide wholesale and make room for men of Anglo-Saxon descent, and then the army would be "Indianised"?

India has had a long history, during which she has been subjected to many invasions, like other countries with a long or short history (including Great Britain). History does not record that any invaders could boast of continuous and uninterrupted victories here. India in all periods of her history has pro-

duced brave soldiers and great generals. Even the English had to sustain many defeats at the hands of India's generals. In the early days of the East India Company's rule many Indian commandants led both Indian and British soldiers. Therefore, it is a falsehood to say or suggest that India cannot produce military leaders. If British officers are unwilling to serve with or under Indian officers, that does not prove the unfittiness of Indians. It only proves that British officers are guilty of selfishness and unjustifiable and unreasonable racial pride.

One of the so-called arguments of the British monopolists is that the problem of India's defence does not stand alone but that it must be considered and co-ordinated with that of the defence of the whole British Empire. If so, why was the Skeen Committee appointed first, and this argument brought forward after it had reported? The logical course should have been to appoint the Imperial Defence Committee first, and after obtaining their opinion as to what should be done with and for the Indian army, an Indian Army Committee might have been appointed to settle details. Probably the men at the head of the Government of India hoped when they appointed the Skeen Committee that the Committee or at least a majority of its members would report that even partial genuine Indianisation of the army was impossible. But the report has satisfied their hopes. Hence the various pretexts and excuses that are being invented to shelve it.

The Siamese, the Chinese, the Persians, the Nepalese, the Afghans, the Japanese—can all produce officers of their own nationality. Only the Indians cannot. Why? Because they are under British rule.

Whether India remains a part of the British Empire or becomes independent, it must be defended by its own men. In deciding how this can or ought to be done, Indians cannot take it for granted that the problem should necessarily be approached with the preliminary assumption that India is for ever to remain a part of the British Empire. It has been argued that in any war with a first-class power, India cannot defend itself unaided, it must take the help of Britain. But in the event of any war with a first-class power, neither Persia, nor Siam, nor Afghanistan, nor Nepal can defend itself unaided. Do these countries for that reason consider their problems of self defence

cannot protest nor can they answer questions on them as they would like to

Miss Mayo's Services to Imperialists

Miss Mayo knows that the time for reforming, or tailing nullifying or ending the Montagu Chelmsford Reforms is drawing nigh. She knows too that the vast majority of Britishers do not want that India should have even a modicum of real freedom, and would be glad to discover or invent excuses for keeping India for ever politically and economically enslaved. Just in the nick of time comes out her book 'The timeliness of the publication is not one of its negligible merits.

Another fact shows that she knows the game of Imperialists very well. Britishers know how to accentuate and take advantage of Hindu Moslem differences. So she does not forget to point out that Musalmans are socially better than Hindus. She also knows that the educated classes are the Britishers' *bête noire*. Hence she pours contempt on them and extols the martial races.

We may be permitted to observe here incidentally that Mr George Bernard Shaw's denunciation of India in the introduction which he has written to his friend Mr William Archers' three posthumous plays has also been quite timely.

It may be that neither Miss Mayo nor Mr George Bernard Shaw should be classed among anti Indian propagandists. It may only be that accidentally things are so shaping themselves as to favour the anti Indian imperialists. But there is no harm in pointing out how things are happening quite accidentally.

"No Confidence in Bengal Ministry"

The motion of no confidence in the Bengal ministry has been carried by the votes of men all of whom did not vote for the same or similar reasons. Some professed to have voted for the motion because they, as Swarajists, were against dyarchy. Others voted with them because they did not like one minister or the other or both. Others again voted for purely personal reasons. So the vote of no confidence is not a vote against dyarchy. Even if it had been a

vote against dyarchy, it could not have ended that system of administration.

The failure of the Bengal National Bank ought to have been a sufficient warning to Mr B. K. Chakrabarti to lead him to resign. The subsequent revelations connected with the affairs of the Banga Lakshmi Cotton Mills ought to have hastened his resignation. For though he had given up his connection with these two concerns on accepting a ministership, he had previously been connected with them for a sufficiently long time to justify people in thinking that he was to some extent responsible for what had happened. Of course, nothing criminal has been proved or suggested against him. But so far as actual results go, remissness or incapacity may lead to failure in business, as much as dishonesty and breach of trust. For these reasons Mr Chakrabarti had become unpopular with his countrymen, apart from his merits or demerits as a minister. Due praise should not, however, be withheld from him for the financial responsibility he undertook in being the guarantor of both the concerns. As a guarantor his liabilities amount to 45 lakhs.

As for Mr Ghaznavi, he gave great offence to a section of Bengali Musalmans by accepting a ministership after Sir Abdur Rahim had failed to persuade any Hindu M. L. C. to accept office with him. Otherwise, broadly speaking, Mr Ghaznavi had not yet proved himself to be a less zealous Muslim communalist or a less competent minister than any other Muslim minister in Bengal.

Another cause of the unpopularity of both the ex-ministers is that on questions on which all parties felt alike, e. g., the release of the *détenus*, they had not taken a bold stand.

Dyarchy is a bad system of government. But in itself it is not worse than autocracy. At the same time it must be considered worse than autocracy pure and simple if it can be successfully passed off as responsible government or self government. For lovers of freedom are on guard against undisguised autocracy, but they can be taken in by what is not self government but only masquerades as such.

If dyarchy could be destroyed and self government established in its stead, nothing could be more welcome than such an event. But if dyarchy be only in suspended animation or in abeyance and autocracy has full sway, then nothing is gained. Dyarchy

with competent, honest and hardworking ministers would be preferable to it, because such men can do a little good work and prevent a little mischief, with the help of the Legislative Councils. And as dyarchy has been seen through, nobody would now mistake it for real responsible government or self-government, or even a half way house to it.

Among Bengal M. L. C's there are men enough who can carry on the work of ministers. But it is doubted whether there are any two men among them who would be able to command a majority of votes for the full term of the present Council or any considerably long period. In constitutionally governed countries like Great Britain, the resignation of ministers is followed by a general election. But India is not such a country.

Bengal National Bank and Banga Lakhmi Cotton Mills

The rogues and incompetent men who have brought the affairs of the Bengal National Bank and the Banga Lakhmi Cotton Mills to such a miserable pass should have their deserts. No pity would be left for them.

We have no idea of the profits, if any, made by the Bengal National Bank at any time. But the goods produced by the Banga Lakhmi Cotton Mills have been all along in such great demand, that it has often happened that the supply has fallen short of the demand. And the concern has been in existence for a good many years. It may be assumed, therefore, that enormous profits have been made and misappropriated by scoundrels.

That there is some probability of the Mills being run by a new managing agency gives grounds of hope that the money invested in it by many a poor man and woman, including many poor widows, will not be lost.

Detenus and the Bengal Council.

Some Members of the Bengal Council gave Mr Moterley a very bad hour with their interpellations relating to detenus and supplementary questions arising out of his answers, when he gave any. For to many a question he could give no answer at all. It is a shameful business, this keeping of innocent men deprived of their personal freedom for an

indefinite period without any trial, open or in camera. And it is still more shameful that the conditions in which many of these men have to live are worse than those existing in jails. Owing to these conditions, many have contracted serious illness, of which some have died, and some are next to death's door.

Earl Winterton's Mendacity

In the Legislative Assembly, in reply to questions on the statement made by Earl Winterton in relation to the alleged trial of Mr S C Bose and other detenus, Mr Crerar, the Home Member had to admit that the Earl had made an inaccurate statement. Mr Crerar also said that Lord Winterton's false statement that Mr S C Bose had been tried by two Judges was not based on any statement that the Government of India had supplied him with. Indians are, therefore, left to guess what the source of his information was. It is possible that he did not understand or read carefully the information sent to him from the Government of India Secretariat. In that case, his unfitness for his office is quite plain, — a man who is so foolish or so careless ought not to be an Under-Secretary of State. Or he may have derived his information from men like Lord Sydenham or Sir Michael O'Dwyer. If he did so, he acted against all official procedure and rules and was guilty of insulting the Government of India, to boot. Or it may be that he exercised his faculty of imagination and invented his statement. In that case he should be made Poet-Laureate Extraordinary.

Earl Winterton did not frankly acknowledge his mistake in the Commons. He pretended to think that Mr. George Lansbury had not understood him aright. That shows the character of the man.

General Dyer

When General Dyer was still in the land of the living, we said all that we had to say of him and his murderous exploit. We had no desire to write anything more. But from the many cuttings from the *London Morning Post* and other Tory papers sent to us by friends, it appears that persistent attempts are being made by the enemies of India to produce the belief that Dyer was a

martyr to duty and a saviour of India! When it is said that Dyer saved India, it is, of course, meant that he prevented India from being lost to the British Empire. That is not saving India, but saving the British Empire. But even in that sense he did not save India, as there was no actual or projected rebellion far from saving India for the British Empire, the Jalianwala Bagh massacre which stands to his discredit roused feelings which would have led to India going out of the British Empire if Indians had a sufficiency of up-to-date arms and ammunition and competent warriors to lead them

Insult to Religion to be Made Specific Offence

Mr Crerar, the Home Member, has introduced a Bill to make it a specific offence intentionally to insult or attempt to insult religion or outrage or attempt to outrage the religious feelings of any class of His Majesty's subjects. That in spite of the conviction of the accused in the *Rasala Vartman* case, such a bill has been introduced, shows that Mr Justice Dalip Singh was right in his view that the law as it stands cannot be made applicable to offences covered by Mr Crerar's bill.

We are against insults to any religion and to outraging religious feelings. But we do not like the new bill. The British bureaucracy in India should not as a general rule be armed with additional powers to punish people. They cannot be trusted to use such powers with impartiality and due discretion. All offences against good taste, ethics, etc., ought not to be made penal offences.

Besides, the line of demarcation between serious criticism and justifiable denunciation or satire or sarcasm and insult to religion cannot very often be drawn with unerring precision.

But as we have not learnt to bear and forbear, we must be kept in check by the whip of the foreign slave driver. The lampoonists and fanatics of different sects must consider that to be a great honour.

As for the administration of the proposed law, it is more likely than not that it would be more often enforced against those who are not turbulent or fanatical or comparatively

less turbulent or fanatical than against those who are more turbulent and fanatical.

The penalty proposed includes imprisonment up to two years with or without fine, which is unnecessarily severe.

In this connection *The Behar Herald* reminds the public that

Exactly eight years ago, there appeared in a missionary paper of Calcutta a letter from a Mahomedan correspondent making the vilest reference to the prophet of Islam. There was considerable feeling among Mahomedans, who moved Government to take action against the paper. It will be remembered that the Press Act was then in full force, and consequently, the public was surprised when the Bengal Government came out with a communique which stated among other things that the publication of the letter would not justify action under the Press Act or under any other legal enactment.

MUCH WATER HAS FLOWED UNDER THE BRIDGES since then. In the Punjab several papers attacking Christianity were suppressed, while missionary publications making the most shocking imputations against personages regarded as sacred by Hindus and Mahomedans were never touched. This immunity was the direct cause of the origin of literature of the type of the *Rangila Rasul* and the *Rasala Vartman*. The action now taken should not, however, be supposed to be the outcome of a general campaign against those who wounded the religious susceptibilities of other communities by traducing their prophets and saints. The point was forcibly brought home by the defence counsel in the *Rasala Vartman* case who pointed out the inconsistency of proceeding against one particular writing while other writings of a similar nature were condoned.

THE OBSERVATION MADE BY MR. JUSTICE BROADWAY on this contention of the counsel was extremely significant. His Lordship said, "I can only conclude that action was not taken by Government in connection with the writings referred to by Mr Puri (counsel for the defence), viz, the 'Journey from Delhi to Admadabad' (nowhere) and the 'Unswin Saddi ka Maha Rishi' because they were not considered by Government to have transgressed the law." This observation of the Judge could only mean that in his lordship's opinion the only justification for the inaction of Government in the matter was that they thought that the publications had not transgressed the law. The highly offensive character of these publications, however, was so palpable that the Punjab Government realising the awkwardness of the situation in which his lordship's remarks have placed them have come forward with an explanation which is far from convincing. With regard to the publication, 'Journey from Delhi to Admadabad,' the explanation says that it was printed in a paper published outside the Punjab and with regard to the other publication it only refers to the reply given by Sir John Maynard in reply to a question in the Punjab Legislative Council which in effect says that the publication of the pamphlet in September 1923 did not appear to have caused any general public feeling and no comment regarding it appeared to have been made in the Press till after the

institution of the proceedings against the author of the Ranga Rasuf' in July 1924. There was a time when equity in England used to vary with the Lord Chancellor's foot. According to the Punjab Government, their own apathy or keenness must be the sole test of deciding whether a publication is offensive or not. Thickness of the hide which receives the blow and not the blow itself would be the determining factor.

Skeen Committee's Report

The Government of India appointed a Committee to report on the gradual Indianisation of the army. They chose the personnel of the Committee themselves, the chairman being Sir Andrew Skeen, the Chief of the General Staff, who knows as much about India's military needs and capacity as anybody else. The Committee made some recommendations unanimously. But even these the Government have been trying to shelve on various pretexts and excuses, the hollowness of which has been repeatedly exposed. In the recent debate on the subject in the Legislative Assembly the Indian members acquitted themselves quite well. The name of Mr K C Roy deserves special mention in this connection as he though a nominated member made an outspoken speech which made the official benches very uncomfortable.

We should be highly pleased if good arguments and considerations of justice alone could avail to give Indians their rights as citizens. But unhappily that is not the case. If we want self rule, the objection is raised that self rule cannot be had without self defence. If we want to have the opportunity of self defence we are told in effect that we cannot have it unless our social system, our educational system (for which England is entirely responsible), etc., become like those of England. *Why not go the whole hog and say that the climate of India must be like the climate of England and the people become either thoroughly Anglicised (if possible) or commit suicide wholesale and make room for men of Anglo Saxon descent, and then the army would be "Indianised"?*

India has had a long history, during which she has been subjected to many invasions, like other countries with a long or short history (including Great Britain). History does not record that any invaders could boast of continuous and uninterrupted victories here. India in all periods of her history has pro-

duced brave soldiers and great generals. Even the English had to sustain many defeats at the hands of India's generals. In the early days of the East India Company's rule many Indian commandants led both Indian and British soldiers. Therefore, it is a falsehood to say or suggest that India cannot produce military leaders. If British officers are unwilling to serve with or under Indian officers, that does not prove the unfitness of Indians. It only proves that British officers are guilty of selfishness and unjustifiable and unreasonable racial pride.

One of the so called arguments of the British monopolists is that the problem of India's defence does not stand alone but that it must be considered and co-ordinated with that of the defence of the whole British Empire. If so, why was the Skeen Committee appointed first and this argument brought forward after it had reported? The logical course should have been to appoint the Imperial Defence Committee first, and after obtaining their opinion as to what should be done with and for the Indian army an Indian Army Committee might have been appointed to settle details. Probably the men at the head of the Government of India hoped when they appointed the Skeen Committee that the Committee or at least a majority of its members would report that even partial genuine Indianisation of the army was impossible. But the report has falsified their hopes. Hence the various pretexts and excuses that are being invented to shelve it.

The Siamese, the Chinese, the Persians, the Nepalese, the Afghans, the Japanese—can all produce officers of their own nationality. Only the Indians cannot. Why? Because they are under British rule.

Whether India remains a part of the British Empire or becomes independent, it must be defended by its own men. In deciding how this can or ought to be done Indians cannot take it for granted that the problem should necessarily be approached with the preliminary assumption that India is for ever to remain a part of the British Empire. It has been argued that in any war with a first class power India cannot defend itself unaided, it must take the help of Britain. But in the event of any war with a first class power, neither Persia, nor Siam nor Afghanistan, nor Nepal can defend itself unaided. Do these countries for that reason consider their problems of self defence

such before the authorities, cannot be considered by us merely or chiefly in its financial aspects. Whether India remains within the British Empire or becomes independent, all political parties in India want that India should have an army consisting entirely of Indian privates and Indian officers. This cannot come to pass at once. But Indians cannot agree to any arrangement which places new or more formidable obstacles in the way of reaching the above goal. The proposal under discussion would increase the British garrison in India, by whatever name it may be called, and help to make British rule in India more safely autocratic. The larger the garrison in India, the easier it would be to cow down and break the spirit of Indians. The object of keeping a large garrison in India is not merely to make autocracy safe and profitable here. Another object is the same as that of the Singapore naval base. Now, Britain's possible or actual enemies are not necessarily India's enemies. Britain may have reasons to anticipate the hostility of some nation or nations. Why should India anticipate similar hostility from them and do or allow to be done things which may bring into existence hostile feelings against her which do not at present exist? The Singapore naval base has been taken by Japan to be a part of the preparations against her. A really independent and rejuvenated China would have similar suspicions. A British Imperial garrison stationed in India would also rouse similar suspicions and hostility.

One of the passages in Prof Sarkar's address to which our contemporary draws attention is where he pleaded for "intellectual Swaraj" and which runs as follows —

The intellectual resurrection of India is the supreme ideal of the Indian nationalist. And in realising this ideal our Universities must play the leading part. This is a duty which they cannot any longer ignore without failing, to justify their existence in the changed world of to-day. They must no longer be glorified schools, mere workshops for turning out clerks and school masters, mechanics and overseers, translators and copyists. They must in future add to the world's stock of knowledge. They must achieve intellectual Swadeshi, instead of clothing our people's minds with garments imported from Europe. Is political Swaraj possible can Swaraj last if given by others in a country which eternally looks up to foreign lands for all additions to human knowledge, for all new discoveries in medicine and science, for all new inventions in the mechanical arts and the accessories of civilised life and for every leap forward of the human mind in its quest of truth?

What Prof Sarkar said and suggested is certainly true, and our intellectual workers, young and old, should try their utmost to achieve intellectual Swadeshi. At the same time those who are striving to achieve political Swaraj may rightly feel that they are trying to bring about conditions which would make the attainment of intellectual swaraj more feasible. We want, not merely a few towering intellectual peaks, but a high intellectual plateau all round. Political swaraj makes this more practicable than political subjection. Intellectual swaraj and political swaraj are to a great extent interdependent.

Prof Jadunath Sarkar's Bombay Convocation Address

Professor Jadunath Sarkar's convocation address in Bombay has been very highly spoken of in many Bombay papers. *The Servant of India* is the latest to eulogise it in its issue of August 25. After giving a summary of the speech and driving its lessons home, it observes —

Brevity is the soul of wit and we think it is also the soul of a good address. Judged in this way Prof Sarkar's address should be a model to those who tire us out by long harangues. But though brief it is pitched in a high key and has placed before the alumni, as well as the citizens, the highest ideal of intellectual development. If we succeed in giving it the concrete shape we shall soon get rid of the intellectual sterility for which our Universities have become bye-words.

Prof Sarkar's Special Calcutta Convocation Address

A special convocation of the Calcutta University was held on the 27th August to confer degrees on the ten graduates who are proceeding abroad for further study. Addressing them the Vice-Chancellor said —

You are getting better chances in life than your comrades but at the same time you are undertaking heavier responsibilities than those who are staying at home. In foreign parts you will be rightly regarded as the representatives of this ancient seat of learning. You have not, therefore, the private individual's freedom to live the life that he pleases. Your speech and behaviour, your intellectual progress and moral character will determine in the eyes of the foreigners among whom you will live, the high or low repute in which this University will be held by them. In your persons your country, your race, your former teachers will be on trial before foreign judges. There will be many

products of other Universities European and American, among whom you will be thrown and with whom you will inevitably stand comparison day after day I know that it is a very heavy responsibility for a young man to shoulder. But I am confident that you will rise to the height of this appeal of your country and will never consent to shame your fatherland in your person. Let the wisdom of the Calcutta University be justified in her children.

But it is not only fresh opportunities of life that you are gaining by being sent abroad for study. It is not merely that you are going to stand forth as our intellectual representatives in foreign lands. Your country has a still greater claim on you. It is your duty to acquire those arts, those processes and those branches of human knowledge which are not taught in India or can not at present be taught here to such a high standard as in Europe or America. You will thus be like the daring explorers and merchant adventurers of 16th century England who opened new trade relations with far-off lands and brought back rich cargoes of hitherto unknown foreign products to their native land. In this way you will have to enrich and invigorate the intellectual life of India and connect her with the ever moving ever progressing outer world of thought and invention. Our young graduates who go to foreign countries inspired by such a spirit and try to live up to this ideal are only paying back to the land of their birth a part of the debt they owe to her. Their foreign travels when devoted to such an aim will not only benefit them personally but enrich their country also. It is only by a constant succession of young ardent and patriotic scholars sent abroad that we can save India's life and thought from being locked up in the placid backwaters of a stationary civilisation.

If India is to take her rightful place among the creators of human thought she must constantly know what the other great nations are doing and how they are doing it. She must know in what respects she can become a creditor nation in the modern world. Her sons trained abroad will bring this message to her on their return; they will naturally be the chief agents of her intellectual advance on these modern lines.

I pray that your hearts may be supported and strengthened in the midst of the trials and temptations, the hardships and dangers of foreign lands by a reflection on the high mission that is for you in the near future. In that mission you have our hearty wishes for your success.

Not merely the ten graduates to whom these words of noble and wise advice were addressed but all who go abroad for study would do well to follow them.

Inundations in Various Parts of India

Parts of Sindh, Bengal, Orissa, Gujarat, Baroda and Katniawad have been devastated by floods. In some areas whole villages have been swept away, rendering hundreds of thousands homeless. The loss of cattle and of crops has been immense. Men, too, have died in

considerable numbers. In the Bombay Presidency the task of giving the kind of relief immediately needed has been well tackled. The restoration of all cattle lost, the rebuilding of houses washed away or damaged and the recropping of fields inundated are tasks of greater difficulty requiring the expenditure of more time and money. Government must help liberally.

Bombay has been able to begin the work of relief at once because there is no lack of public spirited and wealthy persons in that presidency. The lot of Orissa has been different. Ever since the beginnings of British rule, not to go back to an earlier period, this province has not been the sole nor chief care of any provincial government, the result being that it has remained educationally and economically backward. That it was once prosperous and enlightened is evidenced by its architectural remains. This once prosperous land has been again and again hard hit by famine and flood. Both Government and the public should, therefore, pay special and prompt attention to its needs.

The giving of immediate relief is not the only problem to be faced. The example of America shows that it is not beyond the power of engineers to prevent devastation by floods. Neither the British Government nor the Indian States concerned should adopt a *non possumus* attitude. The Bengal Government has published a report on floods in north Bengal with maps, covering a period of half a century, prepared by Prof. P. C. Mahalanobis, its late meteorologist. We do not know whether any remedial steps based thereupon have been taken. Nor do we know whether such reports have been prepared for other parts of India subject to floods, and preventive measures adopted.

A Useful Maharaja Who Exacts Forced Labour

The following appears in *The Daily Herald*—

The Maharajah of Alwar is a devotee of sport. Last year he suggested that Indian panthers might be let loose in the Highlands, and so provide an easy exit for people who wanted to deprive these beautiful lands of sport. Now he is improving the sportsman's amenities of Alwar by building a dam at Ajatgarh, which will provide an improved water supply, not for agricultural land, but for his hunting grounds in the jungle. Three thousand workmen have been compulsorily recruited for work on the dam. While on the job they receive no pay but free board and lodging.

as parts of the problem of defence of some other and first class power? No

But why take hypothetical cases? In the world war could Belgium defend itself unaided? Could France defend itself unaided? Could Great Britain defend itself unaided? Why the last named country had to depend a great deal on the military help given by even poor and despised India. But we have yet to learn that Belgium, France and Great Britain consider their problems of self defence with reference to and as parts of the problems of self defence of their allies.

The real truth is that Great Britain is interested in the problem of the defence of India as an estate of the Britishers. They want to keep it in perpetual subjection. They do not want to enable Indians to defend their country by Indianising the army because that may enable them to make it free also.

Though we have not entirely lost our faith in the partial reasonableness of human nature we are afraid Britishers will not agree to even the semi Indianisation of the army proposed by the Sken Committee until they are driven to it by another great war in which they may stand in need of the help of India's men (both soldiers and officers) and money. But then it may be too late.

Another Command Performance?

Under the above caption *The Indian Daily Mail* writes—

It is very significant that just as the Legislative Assembly is to discuss the recommendations of the Sken Committee a deputation of Army men holding King's Commissions and the Viceroy's Commissions should wait on the Commander in Chief and put forward suggestions as to how they would like the Committee's recommendations to be carried into effect. The deputation is reported to have impressed on his Excellency the Commander in Chief the possibility of the martial races that compose the army resenting the introduction of officers drawn from non martial races. They apprehend that with their humble brains they (candidates from non martial races) will find it easy to get selected in any competition and that the consequence of such selection will be disastrous to the Army in India. Before men from non martial races are selected for officers the deputation would recommend the formation of regiments from such races over which the new officers could be placed without in any way interfering with the efficiency of the present army. Just about the time when there was a discussion on the recent despatch of Indian troops to China, his Excellency the Commander in Chief gave currency to certain heart to heart talks which he had had with a number of army men

in which they expressed an amount of eagerness to go out to China. The present deputation also comes in at a very opportune moment and we have no doubt his Excellency will make use of the deputation and their special plea in his speech in the Assembly over the discussion on the Sken Committee recommendations. The martial classes myth has been exploited long enough in the past. It is high time that it be finally exploded during the discussions in the Assembly on this occasion.

Probably with reference to the same deputation (or was it another?) *The Amrita Bazar Patrika* states

The representatives of the martial races of India waited on a deputation to his Excellency the Commander in Chief and aired their views on the Sken Committee's report. They are pleased that the plan which was placed upon certain sections of the Indian community in regard to their admission to military service has been lifted but we never expected that there would be a complete and violent break with the past such as the recommendations of the Sken Committee imply.

The representatives of the martial races have been pleased to consider that the system of recruitment advocated by the Sken Committee would result in the demilitarization of the officer ranks of Indian Army as a "competitive test is not an unerring test of even intellectual brilliance. The unerring test, of course is that which perpetuates the artificial classification of the people of India into martial and non martial." We are not surprised that the wisdom of the Sken Committee's recommendations passes the comprehension of the representatives of the martial races.

British regiments should be formed by recruiting privates from the families of the cabinet ministers, the peers, the big bankers, the university professors etc. in England and officers should be selected from these classes to be placed over such regiments.

So long as British rule lasts in India, there would be no lack of wily wire pullers and foolish puppets. But as members of a non martial race may we make a suggestion? There are at present many Pathan, Gurkha, Sikh, Rajput, Garhwali, Jat, Maratha and other graduates of martial races and there can be as many more of them as needed. Let the competitive examination for admission to military colleges be limited solely to them and let them alone have the King's Commissions and let the whole army be Indianised. Should this suggestion be accepted by the cunning British wire-pullers and the brainless Indian puppets, one could safely undertake to obtain the consent of the representatives of all non martial races to a self denying ordinance

to the effect that they would give up all military ambitions

The Indian puppets could have suggested that the army should be officered by Indians alone and they should all belong to the "martial races" That would have safeguarded their monopolistic interests and at the same time done some good to India. But, though physically brave, they had no moral courage to do so. Nor, it may be added, had they sufficient intelligence and love of country to make such a suggestion.

It has been said in effect that army officers should not be drawn from the non martial Indian races, as they belong to the educated and politically-minded classes. Such an observation at once shows the cloven hoof. Are the minds of the privates and officers of France, Italy, Germany, Great Britain, Canada, America, Australia, Japan, South Africa, politically blank? Have not British officers and soldiers in India their politics? The fact is, Britishers want that Indian sipahis and Indian officers should simply be as weapons in their hands like their rifles or swords, with no thought or feeling for their country. If they have any such thought or feeling, that is politics and taboo.

Swami Saradananda

By the death of Swami Saradananda of the Ramakrishna Mission, India has lost a great and untiring philanthropic worker. He was a distinguished scholar, too. But he was better and more widely known for the help which he was instrumental in rendering to people in distress, irrespective of caste and creed, whenever in any part of India famine, flood, earthquake, cyclones, fires or epidemics rendered such help necessary. That persons who handle money or other help given by the public should keep and publish detailed and accurate accounts of the same is a proposition which requires to be stated only because some people forget to do this obvious duty.

Swami Saradananda's reports of relief work have always been a model of what they ought to be. Apart from the high character he bore, that is one of the reasons why his appeals for help were responded to.

The external life of the Swami was so beneficent because of his inner life. Of this inner life only his intimate associates can tell, which we hope they will in *Prabuddha Bharata*.

Swami Saradananda

A Novel Military Proposal

Rumours have been published in many Indian papers that the British "Home" Government are considering a proposal to station a part of the Imperial army in India. There are, it is said, to be altogether 120,000 British troops and some 75,000 sipahis in India. The expenses are to be met by Great Britain, India, and the Dominions. It is pointed out that this would result in some reduction of India's military expenditure. That may or may not be. But the proposal, if there is any

The Maharajah is famous not only as a sportsman but as a lavish entertainer of his European guests.

Out of the total revenues of his estate—£337,500—in 1925 he spent £32,000 on the entertainment of guests, £65,000 on the upkeep of his motor cars and stable, £11,250 on his kitchen. The sum allotted in the Budget to education was £2,500.

The British Government in India has passed a law for the protection of Indian ruling princes for various reasons. Though unintended we are sure one of its results will be the preservation of the species of princes to which the Maharaja of Alwar belongs. The British Government will shine by contrast.

This Maharaja should be selected next year to lead the Indian delegation to the League of Nations so that he may be able to declare authoritatively from first hand knowledge that there is no forced labour in India.

Great Britain's Transformation in Health Matters

In an editorial note on public health problems in Bengal it has been pointed out in the May number of *The Calcutta Medical Journal* what a transformation Great Britain has undergone in matters of health within the last fifty years. It is stated therein that

Between 1831 and 1854 epidemics of cholera visited this island thrice and people used to offer prayers to check their progress just as in India now. As early as that they found the relationship between poverty, *and* ignorance and epidemic diseases. Up till 1870 the sanitary departments were concerned mainly with the passing of negative orders such as do not commit nuisance, do not keep houses unclean, keep the drains clean just as here now. It was the Royal Sanitary Commission of 1871 which laid down for the first time a comprehensive scheme of securing for the people a sanitary minimum of what is necessary for civilised social life and pointed out the incompleteness of legal enactments and put a stress on the correlation and co-ordination of various local sanitary authorities and organisations. This led to the passing of the Public Health Act of 1875. This measure and the Elementary Education Act of 1880 have borne fruit in a single generation. Between 1874 and the close of the 19th century came in quick succession a series of sanitary and legal enactments of a positive character—on the prevention of river pollution and protection of water supplies, provision of housing accommodation and of isolation hospitals and notification and prevention of infectious diseases. The early part of the next century saw the passing of a number of Acts dealing with measures of protection of children, provision of school meals, protection of food, medical inspection and treatment of school children, pensions for the aged, widows and orphans, the insurance of the adolescent and

adult against sickness (over 13 millions of people were thus insured in 1924), accident and unemployment, housing reform, industrial welfare, maternity nursing, dentistry and with the prevention of some important diseases such as tuberculosis, mental deficiency, lunacy, blindness and venereal diseases. Within this period of 50 years as a result of persevering work the longevity of the people has increased from 36 to 56 years, the general mortality has diminished by half, the infant mortality has come down to 75 per thousand, deaths from tuberculosis have diminished by two-thirds and the sanitary environment (adequate nourishing food, clean houses and clean surroundings) has greatly improved.

In India Great Britain has enjoyed supreme power, including the power of the purse for more than a century. It was possible for the British rulers and the British rulers alone to do for British ruled India what has been done for Great Britain during the last fifty years. But they have not done it. Nevertheless, it is the Indians who are held solely responsible for the backward condition of India in sanitary and other matters. The British factories on the banks of the Ganges are partly responsible for river pollution.

Dr Gour's Criminal Law Amendment Bill

The Legislative Assembly has passed Sir Hari Singh Gour's Criminal Law Amendment Bill by 51 votes to 41 in the teeth of Government opposition. The Indian Criminal Law Amendment Act of 1908 Part II, popularly known as the Samiti Act, empowered Government to deal with associations declared by them to be unlawful. Dr Gour's Bill does not seek to take away this power, it only seeks to confer on the High Courts jurisdiction, as in all other criminal matters, to revise the action of the executive in declaring an association unlawful, and to give the right of appeal to an aggrieved person. The second part of the Bill extends the provisions of the Habeas Corpus Act to all British subjects in India. A similar bill was passed by the Legislative Assembly three years ago, but was thrown out by the Council of State. This too, may have a similar fate. Supposing however, that sober and wise body passes it, it will have to receive the assent of the Governor-General. Government's opposition is only a fresh reminder of the bureaucracy's love of irresponsible and unlimited power, to be exercised without due care and circumspection.

Duty on Imported Yarn

In consequence of the representations made by the Bombay Mill owners' Association the Government of India have revised their decision in regard to the cotton industry and have decided to impose till March 30 1930 a specific duty of one and a half anna per pound on all imported yarn unless the value of the yarn exceeds Rs 1-14 per pound, yarn of higher value being subject to an *ad valorem* duty of 5 percent. The reason given for this step and for the time limit is that the Japanese yarn which competes with the Indian is produced by night work of women in factories working with double shifts, and that the system of night work by double shifts is expected to be stopped by legislation in Japan by March, 1930.

Our mill owners would do well not to depend solely or chiefly on import duties bounties and the like. They should depend more on improved machinery, and the increased efficiency of labour produced by education and better conditions of living.

—

Indian Representation on the East African Commission

In Africa as in every other continent and country the welfare of the indigenous inhabitants to be secured by their own self rule, should be the object of all lovers of humanity. But in all subject countries the selfish and hypocritical masters pretend to be eternal trustees and seek to keep the indigenous inhabitants in perpetual servitude. East Africa is no exception to this rule.

The Kenya White Paper of 1923 admitted the "paramount duty of trusteeship" of the natives and laid down that this duty "will continue as in the past to be carried out under the Secretary of State for the Colonies by the agents of the Imperial Government and by them alone." It was added that the British Government were "unable to delegate or share this trust with any one else."

Kenya is an African territory and his Majesty's Government think it necessary definitely to record their considered opinion that the interests of the African natives must be paramount, and that if and when those interests and the interests of the immigrant races should conflict, the former should prevail.

This policy is going to be changed. The new policy proposed to be adopted was outlined in the course of the recent debate

in the House of Commons on the subject of East Africa. Self government for East Africa is to be self government only for the whites. The Africans are to be under their trusteeship" for ever. This is clear from the following extract from the speech of Mr Amery, Secretary of State for the Colonies:

All that is laid down in this White Paper and all that constitutes any modification of the underlying principle of the White Paper of 1923 is that we there explicitly reject the idea of white and black diarchy and affirm that progress towards self government on the part of the white community does mean must mean and ought to mean an association with the black community in the sense of trusteeship to the weaker and more numerous part of the population.

This means in plain language that the East African natives are to remain serfs in perpetuity to their white masters and that the lot of the Indian settlers, who were the makers of East Africa and who far outnumber the whites, is to be little better.

Under the circumstances, Mr K C Roy did well to impress on the Government on the first day of the current session of the Assembly the urgency of securing proper and adequate representation of Indians on the proposed East African Commission.

—

'Freedom' for the Calcutta University

There can be no question that so long as Sir Asutosh Mukherjee lived he on most occasions of conflict with the bureaucracy fought for his own freedom to do what he liked in the Calcutta University with the help of his self effacing colleagues and followers. It is therefore quite proper, of course to eulogise again and again all the distinguished men who were tools in his hands as sturdy lovers of academic freedom. We do not know whether those who are fond of repeatedly exploiting an enumeration of their names are doing so with their consent. It would be quite easy for us to show up their independence. But we do not like to expose anybody until we are sure that he claims to have been a worshipper of freedom during the regime and life-time of Sir Asutosh Mukherjee.

The Swarajist movement professes to be a branch of the Non co-operation movement. This movement sought to destroy the prevailing system of University and school education. But for a long time past Swarajists have been claiming, in combination with the Mukherjee-Banerji clique, to be the defenders.

Other matters connected with the drings of the monopolist companies show that where they have constructed waiting rooms, the money has mostly come from District Boards and similar public bodies. The construction of the Gakhkhani Bharami Khali, a canal excavated at a cost of over 7 lacs, paid from provincial revenues, which reduced the distance between many of the stations served by these Steamer Companies, led to no reduction of fares, rather the Companies forgot even to show the reduced mileages on their tickets. A test case was made to establish the fraud involved in this and the decree went against the Companies. The Steamers run by the Companies are mostly obsolete and constructed in the eighties and nineties of the last century. The result of all this is that the people of Bengal are being made to suffer untold misery so that the Companies may make great profit. And they are making it. The Government of Bengal having expressed their inability to do anything in the matter Mr Neogy is taking the appeal to the Assembly. Whether he will succeed in his attempt to redress long-standing public grievances against Companies who have powerful friends, remains to be seen.

Welcome to Mr C. F. Andrews

Along with the rest of our countrymen we extend a cordial welcome to Mr C F Andrews on his return to the land of his adoption after his most strenuous labours in South Africa on behalf of the Indian settlers of that country. He has done his work all along with great tact and charity and faith in God and in human nature.

Execution of Sacco and Vanzetti

The execution in America of the Italian emigrant labourers Sacco and Vanzetti seven years after their arrest on a charge of murder and after a most protracted trial has created a great sensation all over the world. It is not their fellow labourers, fellow socialists, or fellow-communists alone who believe in their innocence or at least doubt if there was sufficient evidence to convict them, numerous other people, entirely unconnected with any kind of labour movement, are not convinced that they were guilty of the crime of which they were accused. In any case, they had been kept

in prison for so many years after conviction, in suspense as to their ultimate fate, that it would not have been cheating justice if her dues if they had not been executed.

Women's Demand for Modification of Hindu Law of Inheritance

At the Dacca Young Men's Conference Miss Sakuntala Chaudhuri moved a resolution urging necessary alteration in the Hindu law of *Dayabhaga*, which denies to Hindu women a legal right to their paternal property. The resolution was lost by a small majority. Miss Chaudhuri was right in her diagnosis that this denial of the right to a share of paternal property was one of the causes of the regrettable dowry or "bride-groom price" system.

Raja Rammohan Roy has shown in his paper on Hindu women's right to property that some ancient codes of Hindu law have assigned to women a share of ancestral property and of the husband's property. Women, and men who are advocates of women's rights should read this paper, and carry on an agitation until this ancient right is recognised.

Investiture of the Maharaja of Tripura

In our boyhood we used to read of a country called "Svadhini Tripura" or Independent Tripura. Even then, no doubt, if it came to fighting for preserving its independence the Maharaja would not have been in a position to do so. But in Europe and America, there are a good many independent countries the population of which is less than many of our districts. Yet their powerful neighbours have not deprived them of their independence. It is different in India. Within the life time of two generations or so Bhaman and Sikkim and Tripura have lost their independence, not as the result of defeat in war but on account of peaceful pressure. Hence the Indian public have had to read the news of the recent investiture of the Maharaja of Tripura by the Governor of Bengal.

Women Prisoners in Bengal

According to the Bengal Jail Administration Report for 1926, during that year 420 women were directly admitted to jails.

from Court Of these 234 were Hindus 117 Mahomedans and 11 Christians, and 58 belonged to all other classes. As Musalmans form the majority of the inhabitants of Bengal the fact that their female convict population is half that of the Hindu female convict population is a matter for satisfaction. It is due in part to the stricter observance of the purdah by Muslims. The Hindu community should seriously inquire into the causes which have sent such a disproportionately large number of their women to jail. It is no consolation that in Western countries the proportion of female convicts is larger

Male Prisoners in Bengal

Of the male convicts 12126 were Muhammadans and 8616 were Hindus and Sikhs. In proportion to population the Musalmans were found to be more criminally inclined than the Hindus.

Taking both male and female convicts 56.06 per cent were Muhammadans and 40.68 Hindus their percentages in the general population being 53.55 and 43.72 respectively

Prof Taraporewala's Reappointment

The question of the reappointment of Professor Taraporewala as Professor of comparative philology for a period of three years gave rise to a lively discussion at a recent meeting of the Calcutta University Senate. We desire to notice a few points that arose in the course of the discussion. We gather from what various speakers said that the idea of doing without the professor's services at any rate for one year arose because there were few or no students in his class and because the financial condition of the university is unsatisfactory. That the financial condition of the university is unsatisfactory is indisputable and therefore in the abstract it has the right to abolish any chair that it thinks necessary and justifiable. But conservatism should be observed in doing so. We will not refer to any person who is no longer a Professor. But there are Professors who from the date of their appointment have never had a class and have never taught a single student and in fact the subjects they profess do not form parts of university curricula. Why were they appointed and reappointed? A merely technical answer will not do. An impecunious university cannot

afford to throw away thousands of rupees for such chairs. Professor Taraporewala is we believe the only man in our university who knows both Sanskrit and Avestan philology, as well as European philology. If in any year there be no students in his comparative philology class, his services can be utilized in other ways as he is a versatile scholar. But the other professors we speak of have not been and cannot be made useful in this way.—We should add that Prof Jadunath Sarkar is not the man responsible for their appointment and reappointment.

Dr Howells said 'They should be careful lest it might be interpreted elsewhere that there was no room for a non-Bengali scholar in the Calcutta University.' Dr B C Roy rightly repudiated the suggestion on behalf of the University. Thereupon Dr Howells said 'I never suggested anything of the kind. I only said that we should be careful lest it be misinterpreted.' Dr Howells may not have suggested any such thing but the mere mention of such a thing was mischievous and unnecessary. The following most important chairs are occupied by non-Bengalis: proving that the Calcutta University does not discriminate against non-Bengalis: Tagore Law Professorship, Dinshaw Fardnaji Mulla George V Professorship of Philosophy S Radhakrishnan, Hardinge Professorship of Higher Mathematics Ganesh Prasad Carmichael Professorship of Ancient History and Culture D R Bhattacharya Sir Taraknath Professorship of Physics C V Raman Sir Rashbehary Ghose Professorship of Botany S P Agharkar, Professorship of Comparative Philology I J S Taraporewala. It is needless to mention the names of non-Bengali lecturers and readers.

Temporary I M S Recruitment in England

British doctors are being appointed temporarily to the I M S on lavish scales of pay and gratuities. Equally qualified and better qualified Indian doctors can be had for more moderate salaries. But their claims are overlooked obviously on racial grounds. British I C S men want British doctors and so their racial selfishness and prejudice must be respected. The excuse is that as the Lee Commission's recommendations *re* the I M S have not yet been disposed of it is necessary to make these

of the University against Professor Jadnath Sarkar who has spent his whole life from youth upwards in promoting the causes of education learning and research. It is only fitting that plagiarists should join this unholy alliance. Some plagiarists whom we had thoroughly exposed in *Rabasi* by means of photographic facsimiles and other means implored us not to expose them further. So we did not expose them in *The Modern Review* in the same way thinking that they were penitent and would behave well in future. But it was misplaced leniency.

The organ of this unholy alliance has stated more than once that Sir Asutosh Mukherji and Mr G. K. Gokhale acted together in opposing Lord Curzon's Univer. Act. This is not true. Sir Asutosh voted for the measure and Mr Gokhale against it. Neither is it true that Sir Asutosh did not indulge in adulation of the British Government or the representatives of the British power when it was necessary for him to do so. This has been shown in our last March number. That he was also guilty of carrying out the unjust behests of the Government will appear from the following well known facts mentioned by *The Bengalee* —

Now it is given out in all seriousness that from 1906 to 1914 the Government failed to impose its will on the detailed administration of the University—1906-14—Was not that the period of Swadeshi agitation and was it not the time when the Government was enforcing its will upon the Syndicate? Was this not the period when on the suggestion of the Government Mr Krishna Kumar Mitra, Mr Lalit Mohan Das and Mr J. tendralal Bannerjee were removed from the City and the R. pon Colleges under pressure from the Syndicate? That is not perhaps a detail of administration.

It goes against our grain to write against a dead man. But some people would leave us no option.

It is very often assumed that the critics of the Mukherji Banerji clique are supporters of the Government. Our motto has always been "Plague on both your houses." The official wire pulling which Mr Wordsworth exposed was exactly of the same character as the methods adopted by the aforesaid clique.

Zaghlul Pasha

In Zaghlul Pasha the world has lost one of its foremost fighters for freedom. He had done and suffered much for the freedom of Egypt. His spirit will animate his colleagues and followers and future genera-

Zaghlul Pasha

tions of Egyptians will not fail to follow his example. Therein lies the hope of Egypt.

Outrages on Women in Bengal

The Bengali weekly *Sanyikant* has now brought its lists and statistics of outrages on women in Bengal during the last five Bengali years to a close and given a summary district by district. It shows that such outrages have gone on steadily increasing year after year. Some figures from this summary are given below. The years (B. S.) are of the Bengali era.

District	Number of Outrages in the year						Total
	1329	1330	1331	1332	1333	1333	
Calcutta	1	5	12	31	39	88	
24 Parganas	0	0	19	20	32	71	
Nadia	0	0	3	11	24	40	
Murshidabad	0	0	3	3	2	8	
Jessore	0	1	9	8	6	24	
Kholna	0	1	2	3	10	16	
Hawra	0	1	5	2	4	15	
Hugli	0	0	2	3	6	11	
Burdwan	0	0	5	3	4	12	
Midnapore	0	0	4	2	4	10	
Burham	0	0	4	0	1	5	
Bankura	0	0	1	1	2	4	
Rashtali	0	0	9	4	12	25	
Talra	0	0	6	3	7	16	
Bogra	0	0	6	3	11	20	
Rangpur	0	9	20	17	16	62	
Dinapur	0	0	2	6	5	13	

appointments But why could not the re commendations be disposed of expeditiously and why could not highly qualified Indian doctors be given these temporary appointments?

America the American Society for the Advancement of Science Theta Delta Psi

Women Degree holders in Madras

At the annual convocation of the Madras University Professor Dewan Babadur K Ramunni Menon said in the course of his address —

The Madras University had more than 500 women first degree holders on its rolls about forty per cent of whom were further qualified for teaching. He believed Madras was the first province in India in the progress of female education.

Other provinces should emulate the example of Madras.

An Indian Going With An Arctic Expedition

Mr Sharat Kumar Roy assistant Curator of Invertebrate Paleontology of the Field Museum of Natural History of Chicago and formerly a member of the scientific staff of the New York state museum in Albany has been selected as one of the members of the Rawson MacMillan Arctic expedition of the Field Museum.

This expedition which is under the leadership of Commander Donald B MacMillan a widely known Arctic explorer was to leave Wiscasset, Me U S A on the 25th June last for a fifteen months trip.

The two ships of the party were to move to Sidney Nova Scotia, for additional supplies thence they were to proceed to Battle harbor Labrador and up the coast to Kowik. From there one of the ships will go on alone to Baffin Land entering Frobisher bay and Cumberland gulf the coasts of which have been but little or never explored.

The party will operate from a base at Nan an Eskimo village on the coast of Labrador where it will set up winter headquarters and establish a scientific station. It will collect specimens of plants, fossils, fish, animals and birds of the Arctic and in the winter will penetrate the interior of Labrador and stay several months with the Naskapis the most northerly of Algonquin Indians.

Mr Roy who has the degrees of bachelor of arts and master of science is a member of Sigma Xi Paleontological Society of

Mr Sharat Kumar Ray

and Kappa Epsilon Psi. He is a post graduate research student at the University of Chicago.

The Proposed Secondary Board of Education

There has been some controversy in the papers on the subject of the proposed secondary Board of Education for Bengal. It should be an independent body. Admittedly it cannot be entirely independent of the Government but Government should have a voice only as it has a voice say in the affairs of the Calcutta Municipality or in those of the Allahabad University. The majority of its members should be elected non officials a fraction of them being teachers. The Calcutta University should be represented in it by some elected non official Fellows. The Bengal Government should be represented by

a small minority of nominated men most of them preferably non officials. The rules should be so framed as not to enable the Board to arbitrarily reduce the number of secondary schools and of undergraduates. Its public examinations should be under the control of the Calcutta University which should be democratised along with the formation of the Secondary Board

Hindus on the Frontier

That numerous Hindus living in the N W Frontier area have been compelled by their numerically superior fanatical Muslim neighbours by threats to leave their hearths and homes and property and that much if not most or all of their property has been *taxatized* is an undoubted fact. Other outrages have also been committed. Under the guidance of fanatical mullahs these frontiers men have found a short cut to prosperity in this world and salvation in the next. We have no knowledge and experience of the next world we have some of the affairs of this world. Savagery and robbery cannot bring enduring prosperity to any community. We are aware that success in predatory exploits on the international scale though morally reprehensible pay for some time. But those who adopt such wicked methods against their village town and district neighbours only write themselves down as both fools and savages.

It was officially declared that the Indian contingent was sent to China for the protection of Indians in that country. No contingent needed to cross the seas to protect the Frontier and trans Frontier Hindus—the battalions and regiments have been there all along. Did Government mobilise or threaten to mobilise them for the protection of the Hindus? Did it take any other step for the same purpose? If not, why not?

Maulvi Leakat Husain on the Causes of Communal Strife

Maulvi Leakat Husain an orthodox and sincere Muslim has been all along a staunch nationalist advocate of friendship between all castes and creeds and of joint endeavour for our common good. Recently he has tried to produce Hindu Muslim amity by pointing out the causes of conflict and suggesting cures thereof. This attempt

of his, like all his previous endeavours is entirely praiseworthy.

Our conviction is and this has been admitted by Muslims who have read the Quran that music before mosques has not been prohibited therein. It is not at all a religious question. Apart from the fact that in the past music has been played by Hindus before numerous mosques without objection, the Mussalmans themselves do so and have always done so. And they do not object to British martial music played before mosques. Maulvi Leakat Husain has pointed out that when on one occasion the prophet Muhammad was engaged in prayer in a mosque with some of his followers a hawkler passed along the road in front making a terrific noise with some sort of music. The prophet did not forbid him to do so but went on with his devotions. It is not piety, according to Islam or any other religion to break the beads of people who pass along public highways playing music before houses of worship. Nor is it anything but wickedness to intentionally disturb people in their acts of devotion.

We would not insist on stopping or allowing music before mosques by legislation or executive order. It is not only a religious but a secular civic right to pass in procession with music along public thoroughfares. People should not be deprived of this right. Noise of all kinds not merely the music of Hindus in front of all houses of worship not merely of mosques may be prevented or minimised by mutual friendly understanding. If that cannot be done we deserve to slavishly obey the orders of foreigners, now leaning to this side now to that.

Some Muslims object to Hindus carrying the images of their gods and goddesses along roads in front of mosques. They should remember, a modern State is not an Islamic theocracy. It must protect all in the exercise of their right to religious observances which are not inhuman immoral or criminal. They should also remember that the carrying of *tassals* and other things by Muslims is also idolatrous.

As regards cow killing Hindus must tolerate it. Mussalmans have as much right to sacrifice cattle as Hindus have to sacrifice buffaloes and goats. We would impose on both Hindu and Muslim animal sacrifices only those restrictions which are imposed on the slaughter of animals in civilized countries where pigs cattle sheep goats etc.,

are slaughtered alike. The slaughter of animals is a gruesome sight. It ought not to be done in public either by Hindus or by Muslims. Humanity, public decency and sanitation make it necessary that it should be done in places screened from the gaze of passers by. This principle is observed in Europe and America. It should be observed in India too. For economic reasons the slaughter of prime cattle should be prevented. Hindus and Muslims should co-operate to do so.

Shuddhi and Sangathan stand on the same footing as tabligh and tanzim.

Dr Ansari's views on the present situation

In the course of an interview to the Associated Press Dr Ansari summed up his views on the present political situation as follows:

I urge that all our energies and resources should be concentrated on fighting the enemy rising inside our own body viz communal and political discord. I beseech Hindus and Mussalman to cease fratricidal warfare and settle the communal question without narrowness and bigotry. I appeal to all those who still desire to go to the Councils to frankly confess that they are Co-operators to sink their differences, their quarrels and to form one united popular party.

I cordially invite all communities and all political parties to join the National Organisation in a body in order to strengthen it and make it truly representative and national. I plead the cause of Labour which has been shamefully neglected by us so far and lastly I advise the speedy preparation of the future Constitution of India.

Whether the making of this pronouncement after most provincial congress committees had declared themselves in favour of Dr Ansari's election to the congress presidential chair was a deliberate stroke of policy we cannot say. But it is certain that if his views had been known beforehand some of his supporters in the provinces would not have voted for him.

We do not find anything objectionable in his views though in detail we would not say all that he has said and in the way he has done so.

He continues to be a believer in Non-cooperation. He says: We must realise

that we have failed, and that, from being on the crest of the wave as we were during the height of Non-cooperation we are today in the lowest depths of a trough. But he declares all the same —

I feel as certain as ever that apart from any very extraordinary and unexpected occurrences we shall win back our freedom only by self-discipline, self-organisation and self-help and through a movement in which we would be obliged to resort to direct action in some shape or form.

Our feelings are similar.

Sir R. N. Mukherji on Co-operation

When Sir Rajendranath Mukherji speaks on any movement which requires business capacity and solvency to carry to a successful issue he has the right to be heard. In his recent pronouncement on the Co-operative movement in Bengal he pointed out that the things from which at present the province is suffering and which make it imperative to push on Co-operation are exactly the things which stand in the way of the spread and consolidation of the movement. Bengal suffers from poverty, indebtedness and illiteracy. These stand in the way of the spread of the movement. But it is mainly co-operation which can pull Bengal out of the slough of despond. Sir Rajendranath pointed out how the peasants of Germany and Ireland have got rid of their indebted condition by recourse to co-operation and how Italy has fought illiteracy with the same weapon.

He wants our villages to be made centres of the movement. In his opinion all the villagers should become members of the village co-operative societies which should be autonomous in their own internal affairs as far as may be practicable.

The co-operative movement is at present under official guidance and control. It should be democratised. But any attempt which may have to be made in that direction must be made by men whose honesty and solvency are unquestionable and whose business capacity has been proved by successful work in other directions.

INDIA'S WOMANHOOD

News and Portraits

MISS SHEILA RAY daughter of the late Dr Paresh Ranjan Ray has as announced before, topped the list of successful candidates (first class first) in the Allahabad M. Sc. (previous) examination in Chemistry. Miss Ray's academic distinction deserves special mention in view of the fact that a very few girl students in this country go in for science degrees.

Miss Sheila Ray

MRS. ASRUKANA DEBI daughter of the late Prof Hiralal Sanyal of the Calcutta University Law College has passed the last B A examination of the Calcutta University with high second class Honours in English. She did well at the Matriculation and Intermediate Examinations. Much credit is due to her because she has been able to prosecute her studies even after entering married life.

Although the citizens of Calcutta enjoy the privilege of electing women councillors to the Municipal Corporation yet it is regrettable that not a single lady has been elected to that body as yet. At the last election two lady

candidates—SRIMATI MAYA DEBI and SRUKTA URMILA DEBI—sought the suffrage of the male

Mrs Anoa Thomas
Supt. Maternity Dept. Madras

Mrs. Asrukana Debi

Mrs. Jayalakshmi Kumar

Srimati Maya Debi

Mrs. Lakshmi Ammat

Mr. Ponnuswami

voters. But neither of them has been returned.

In the sphere of civic and educational activities Indian ladies are making much headway. We learn:

MRS. LAKSHMI ANJAL has been nominated as a member of the Vellore Municipal Council. MRS. JAYALAKSHMI KUMAR has been nominated as a member of Chingliput District Educational Council. MRS. H. SARORU PONNUSWAMI, M.P.E., Secretary of the Red Cross Society, Palamcottah has been nominated as a member of the Tinnevely District Board.

MRS. ANNA THOMAS has been awarded first prize medal for an essay on child-welfare.

THE MODERN REVIEW

VOL. XLII
NO. 4

OCTOBER, 1927

WHOLE NO.
250

TO JAVA

FROM THE PILGRIM FROM INDIA.

(Translated from the Original Bengali)

I

In a dim distant unrecorded age
we had met, thou and I—
When my speech became tangled in thine
and my life in thy life

The East Wind had carried thy beckoning call
through an unseen path of the air
to a distant sun lit shore
fanned by the coconut leaves
It blended with the conch shell sound
that rose in worship at the shrines
by the sacred waters of the Ganges

The great God Vishnn spoke to me
and spoke Uma, the ten armed Goddess
'Make ready thy boat carry the rites of our worship
across the unknown sea'

The Ganges stretched her arm to the eastern ocean
in a flow of majestic gesture.

From the heavens spoke to me two mighty voices—
the one that had sung of Rama's glory of sorrow
and the other of Arjuna's triumphant arm—
urging me to bear along the waves
their epic lines to the eastern islands,
and the heart of my land murmured to me its hope
that it might build its nest of love
in a far away land of its dream

II

The morning came, my boat danced on the dark blue water,
her white sails proud of the favour of a friendly breeze
She kissed thy shore, a stir ran athwart thy sky,
and the green veil fluttered on the breast of the Nymph of thy
woodland

We met in the shade of the night fall,
 in the dark hours of the earth,
 the still evening was touched to its depth
 by the blessings of the Seven Holy Stars of Wisdom.
 The night waned, and Dawn scattered her prodigal gold
 on the path of our meeting
 along which the two companion souls
 combined their journey through ages
 among a crowd of gigantic visions

III

The time wore on, the dark night came upon us,
 and we knew not each other
 The seat we shared was buried under the Dust
 raised by Time's chariot wheels
 By the receding flood of oblivion I was borne back
 to my own lonely shore—
 my hands bare, my mind languorous with sleep
 The sea before my house remained dumb
 of the mystery of a meeting it had witnessed,
 and the garrulous Ganges spoke not to me
 of a hidden long track to her other sacred haunt.

IV

Thy call reaches me once again
 across hundreds of speechless years
 I come to thee, look in thine eyes,
 and seem to see there the light of the wonder
 at our first meeting in thy forest glade,
 of the gladness of a promise.
 When we tied golden threads of kinship
 round each other's wrist

That ancient token, grown pale,
 has not yet slipped off thy right arm,
 and our wayfaring path of old
 lies strewn with the remnants of my speech
 They help me to retrace my way to the inner chamber of thy life
 where still the light is burning that we kindled together
 on the forgotten evening of our union

Remember me, even as I remember thy face,
 and recognise in me as thine own,
 the old that has been lost, to be regained and made new

RABINDRANATH TAGORE

WHEN SHOULD INDIA HAVE SELF-RULE?

By THE REV. DR. J. T. SUNDERLAND

ONE of the most remarkable groups of men known to modern history was that company of patriots in America in 1776 who threw off the British yoke and launched the United States as a new and free nation in the world. If they had waited for freedom until their British masters had educated them for it and pronounced them fit, they would have waited until doomsday.

England long tried the short-sighted, imperialistic policy of holding Canada under close domination, treating her people like children unable to take care of themselves, just as she is treating India, and withholding from them the self-government that they wanted, while she went on with her exasperating plan of putting them off with promises and pretending to educate them for 'freedom' instead of giving freedom. Like any other self-respecting people they chafed, protested and rebelled and England would have lost them, as she had lost her American colonies at the South, had not Lord Durham, who was sent to Canada to look into matters, returned home with a report which shocked the British Government into sense, and caused it to grant to the Canadian people, practically at once a very substantial quantum of real self-government.

Japan did not require to be educated for freedom and self-rule by a foreign power. Siam did not. Yet both nations are making fine progress, and are ruling themselves well.

Turkey has at last got for herself a government that gives every evidence of being strong, well organised, and enlightened. Her long delay was caused by foreign dominations and tyrannies. With relief from foreign control, and with freedom to manage her own affairs, she is taking her place by the side of the most progressive nations of the world.

All the South American peoples have created for themselves governments that are reasonably good, some of them very good, and all have done it themselves with no domination or training by foreigners. While they were under Spain and Portugal their governments were abominable. Under self-

rule they are steadily approximating the best.

The woes of China have come almost wholly from foreign nations forcing opium upon her, robbing her of her best sea-ports and large areas of her territory, depriving her of her customs and dominating her in a score of ways. If she had been left alone to adjust herself to the conditions of the modern world in her own way and under her own leadership as Japan was, there is every reason to believe that today we should have seen a peaceful and prosperous China, not quite so far advanced as Japan, but progressing steadily and on the whole wisely, and occupying a place in the world little less important than those of the great nations of Europe and America.

One of the most remarkable achievements of the modern world is the progress made by the negroes in America since their emancipation in 1863. Suppose that instead of freeing the slaves at once and setting them at once to the task of walking on their own legs we had said as the British say of the people of India 'No, not now. We must go slow. Some time, after many years, it may do to free them, but we must keep them where they are for a long time and let their masters, overseers and slave-drivers train them for freedom. As soon as we think they are fit to govern themselves we will grant them their liberty,' would they have been free today? Or in a thousand years?

How long would it take a child, kept on crutches, to learn to walk, run and perform with vigor on its legs? How long would it take a person kept out of the water to learn to swim? Of what value is training received from masters who look down upon those being trained as inferiors and virtual serfs because their colour is brown? Instead of the people of India needing more training from the British, the fact is, they have had far too much such training already. What they need is to get on to their own feet, stand up as men and train themselves. The more training they get from lords and masters the weaker they will be, and the

the results of the voting are known can, turn over the government to the Indian officials chosen, and accomplish it all as quietly, in as orderly a manner and with as much safety as one political administration succeeds another in England after an election, or as one King follows another. And why should they not be able to do it all within a single year's time?

Such an Indian Government, while doing no injustice to Britain, would serve India incomparably better than the present Government does because it would be in the hands of men who know India so much better than the British do (or than any transient foreigners possibly can) who sympathize with India's ideals and civilization as the British do not and whose supreme interests are in India and not in a foreign land.

Of course whether India is fit for self-government or not depends upon what kind of a government we have in mind and what we mean by fitness. If as many seem to do, we entertain the ignorant and foolish thought that everything Indian is bad and that only things European or Western are good and therefore that the Indian people will not be fit to rule themselves until they are made over into imitators of Englishmen, turning their back upon their own culture and ideals of thousands of years and adopting the language customs, fashions habits, education, religion and all the rest of an alien and far off land and if the kind of government which we insist that they must be fit for, is a kind not their own not what they want but what we ignorantly and egotistically want them to have—an entirely European kind, and entirely British kind, a kind strange to India's ways, thoughts and ideals,—if this is what we mean by fitness for self-government, then unquestionably the Indian people are not fit, and what is more, there seems no reason to believe that they ever will be.

But if India is to be allowed to remain her own true self instead of trying to become a feeble and foolish imitation of Europe, if she is to be permitted to retain and develop her own unique and important civilization, instead of abandoning it for that of foreign masters, if she is to be permitted to have and develop a kind of government in harmony with her own experience and culture and answering to her own ideals and needs instead of a kind that came into existence under other skies and to serve other wants and which, if it were adopted by her would

probably answer her needs little better than in the Bible story the cumbersome armor of King Saul answered the needs of young David, then, as already has been urged, she is unquestionably ready for self government now.

If it is objected that Indians competent to carry on the government cannot be found, the answer is, they can be found if sought for. As a matter of fact, the Government of India, in nearly all its departments, is actually being carried on now mainly by Indians. And for two reasons first, because there are not enough Englishmen to carry it on, and secondly, because in many respects the English are not competent,—they are so ignorant of the languages of the country, of its history, institutions, customs, ideals, needs, and a thousand things which are necessary to be known to keep the government from making fatal mistakes. A large part of the most difficult, important and vital work of carrying on the Government in all its departments and branches simply has to be entrusted to competent Indians, or else everything would break down. The British occupy the high places, do the directing or "bossing," wear the honors and draw the high salaries. But they can all be spared. As has been said, there is no lack of Indians capable of filling and filling well absolutely every place of official responsibility from lowest to highest.

At this point let one thing be clearly understood, and that is, that turning over the Government of India to the Indian people does not necessarily mean any such thing at all as that all Englishmen would be required to leave India at once or ever. Business men engaged in business that is legitimate, business not dependent upon unjust concessions to them as Englishmen, would not be disturbed. Beyond question the Indian government would do exactly as the government of Japan has done—employ, at least for a time not a few highly qualified foreigners Germans Frenchmen, Americans, and especially Englishmen, as professors, in universities and technical schools, as managers and experts in developing the resources of the country and organizing its industries, and naturally this would continue (as in Japan) as long as there was need,—that is, until India felt herself abreast of the best science and other important knowledge of the West.

With regard to this whole matter of the

relation of a self ruling India to foreigners there seems to be a wide spread misunderstanding. The impression has been created, and given out to the world, that the Indian people want to drive out "bag and baggage" not only the British Government but all Englishmen, if not all foreigners. No mistake could be greater. India has never demanded that Englishmen or individuals should leave, but only they should no longer remain as rulers and lords of the country. Mahatma Gandhi has more than once taken pains to say, as have many other leaders of the highest influence, that Englishmen would be welcome to stay as citizens, as traders, and business men, as educators and even as officials in cases where the Indian Government might see fit to appoint them as such. But they cannot stay as self appointed rulers, masters and privileged exploiters of the land. They must take their places by the side of the Indian people, not above them.

In conclusion, and in a sense summing up all that this article has aimed to say, the whole dream of "educating a nation for freedom" by outsiders and masters, while at the same time keeping the nation in bondage is a delusion. The whole history of mankind

has shown it to be such. The best informed and most authoritative students of the subject condemn it. Modern education and modern psychology declare its folly. It never has been successfully done in the whole history of the world. In the very nature of the case it never can be. "Nations by themselves are made." They cannot be manufactured by foreigners and set up like statues. If the British could teach the Indian people to create a government as like that of England as two peas in a pod and to carry it on as perfectly as possible after the English model, it would do no good. The whole thing would be artificial, and therefore quickly perishable. British ways are not India's ways nor British needs India's needs. The Indian people would have to change their government all over, after the British were gone, to suit it to their own ideals and to answer their own wants. Why cannot the British see this and without further foolish and harmful delay, turn over the country to its rightful owners, for them to build up a government suited to their customs, their civilization and their needs, and therefore really permanent and useful?

[This is a chapter from the author's forthcoming book, *India's Case for Freedom*.]

GREATER INDIA REVISITED

Through the Island of Bali

By KALIDAS NAG

III

TO reach the island of Bali from Surabaya the eastern port of Java, we had to pass through the straits of Madura. The very name "Madura" brought back to my mind the history of the progressive Hinduisation of Indonesia. I could not somehow believe that I was sailing in unknown waters. Heaps of antiquities belonging to the Hindu civilisation of Madura, Bali and Lombok that I saw in the Museum of Batavia, helped also to dispel the idea of "foreignness" from my mind while I travelled in spirit through these "island museums" of Hindu culture reaching to the very confines of the Anstra-

lian continent. Lying on the deck of the small steamship "Bala", I spent the whole day surveying the outline of the southern shore of the island of Madura, while the ship glided past Kamal, Sempar, Sampang and Pamekasan Bunder. The range of low hills in the centre formed a charming dark-green background. On the shore were seen clusters of fishing villages, fishing boats were plying with the help of a peculiar sail woven not of cloth but of palm leaf matting, like the Indian *chitra*, which shone brilliantly in the midday sun. Then I felt that I was in real Polynesia, the world of leaf reed-wicker work.

less able to go alone. Is there any reason to believe that the so called training of the Indian people for self rule conducted as that so called training is now being conducted under virtual slavery and by virtually slave masters that is under the absolute dominance of the British bureaucracy—is there any reason to believe that if it went on for a hundred years it would fit them any better than they are fitted now by their own native intelligence their own natural instincts for law and order and their experience of three thousand years of actual practice of self rule?

I repeat England's whole manner of dealing with India in withholding self rule from her until she is first educated and trained and made fit for it is contrary to the best modern psychology and the best modern systems of education. If there is anything that our best psychologists and educators unite on and declare to be settled and certain it is that the only way in which individuals or groups of individuals can be effectually trained for anything practical or made really fit for anything practical is by the method of actual doing of experiment of practice of trial and error or trial under the possibilities of success and possibilities of failure. The child has to learn to walk by walking to speak by speaking to write by writing to think by thinking to use all his faculties and powers by using them to do everything he has to do in life by doing. Every step forward in civilization has been attained by experiment and experiment always involving the possibility of mistakes. It is by their mistakes as well as by their successes that men and nations always have to learn and to advance. There is no other way.

It is a calamity to India of the first magnitude that throughout all the dealings of the British with her this principle has been ignored. And it is ignored still. If England herself had been kept by some superior power from self rule until she could govern herself without any mistakes or until the judgment of that dominating power she was fit she would today be in political slavery as India is. The same is true of the United States. The same is true of every nation. Every nation in the world that rules itself has learned to do so by actual experience and never by being taught by a foreign power. They have all learned to swim by going into the water. India simply demands

the right to go into the water. One year of actually governing themselves making mistakes and correcting them would do more to train the Indian people for self rule than a millennium of the sham training which they are now getting from their British masters. Dare any one deny that Gladstone was right in declaring that every year and every month that a subject people are kept under the administration of a despotic government renders them less fit for free institutions?

Just when should India receive freedom and self rule? This question has been answered already. But let me cite definite answers from distinguished and trustworthy English men.

No Englishman knows India better than Roy C F Andriew who came there more than a quarter of a century ago was for a time missionary of the Church of England and a college professor and who for some years past has traveled all over India devoting himself to work of social reform. Mr Andriew tells us unhesitatingly that in his judgment, the Indian people should have self rule at once that is as soon as proper adjustments for it can be made and that delay in order to carry on what is mistakenly called educating them for freedom is folly and only makes conditions worse. Here are his own words.

A few days ago a professor from America asked me the question whether India would prefer Swaraj (self government) tomorrow or wait for twenty years when it might be had with less danger of confusion and disaster in the process. I said to him that the real danger was not that of the confusion which might take place if Swaraj came in India tomorrow but rather the danger of delay because every year that Swaraj was not obtained was another year of foreign institutions foreign government and foreign trampling upon India's rights. I asked him as an American what he would think if foreign institutions were imposed upon his own country. Would he wish to get rid of them immediately even if there was some disturbance in the process? Or would he be willing to wait for twenty or any other number of years during which those very foreign institutions would become still more hard to get rid of? He replied immediately. We would never allow foreign institutions to be imposed upon America etc. for a moment much less a term of years. I said to him. Then you see the whole Indian situation at one glance and you can understand why Indians are impatient and cannot bear even a single year to be passed under the foreign yoke. He confessed to me. I have asked Indians from one end of India to the other the same question that I asked you and they have all given me the same answer. They have all said. We want self government now. We protest against

Britain's utterly unnecessary and exasperating delay"

The following is what Mr Bernard Houghton, long a distinguished member of the British-Indian Civil Service, says about delay

"Why should political freedom come to India slowly? It is ready for freedom today. It is not a barbarous country. It possesses a civilization far older than ours (that of Britain). In some respects particularly in its village organizations its civilization is more democratic and better than ours. Indians are peaceable, intelligent, quick to unite in group action. The writings and speeches of their leaders and the tone of their newspapers strike a higher note than in England. Indians really strive after ideals, they really believe in moral principles. Is not such a country ready for self rule? It is no argument to say that because Britain has taken 800 years to attain democracy, therefore India too must advance at tortoise pace. Events and ideas move a hundred times more swiftly now than of old. Look at the United States of America. At a leap they obtained freedom and a constitution which after 150 years is still ahead of Britain. Look at Japan. India aspires to govern herself. For this she is ready. It will be a crime against humanity if she is prevented."

A number of times within the last five years the British Labour Party has declared itself unequivocally in favor of self rule for India, and not in some far off future but immediately, as soon as proper arrangements can be made. One of its most recent declarations is the following:

"We believe that the time has come when our brothers in all parts of India are capable (not will be sometime but are now) of controlling their own affairs equally along with South Africa and other British Dominions and we hereby pledge ourselves to assist in every way possible to bring about this much-desired reform."

The Boers were not required to wait twenty years, or ten or five, or two for self-government. As soon as a constitution could be framed and proper governmental machinery could be set up, home rule was given them. And it has worked well. The Indian people see no reason why self government should not be given to them as promptly as to the Boers.

What the Indian people need and demand is to have the useless crutch the galling crutch, the weakening and injurious crutch of government by foreigners taken away without further annoying postponement, and to be allowed to use and develop their own legs.

No one has expressed this better than Mrs Annie Besant, the eminent Englishwoman who knows India so well

"Indians are tired of Britain's grandmotherly

legislation which always treats them as babes. If the British think them babes very well let the babes crawl by themselves get up and try to walk and then tumble down until by tumbles they learn equilibrium. If they learn to walk in leading strings they will always develop bowlegs. But as a fact, wherever the Indians have been tried fairly in the matter of self government, they have always succeeded."

It is no wonder that many of the Indian people feel themselves stung, insulted, outraged by the insistence of the British that they need to be tutored for self rule, as if they were children, as if they had not ruled themselves for thousands of years,—and tutored by a nation which is a *parvenu* in self rule compared with India. It seems to them much like the talk of some young American "flappers" about "bringing up father."

As for the question, how long a time is needed to give India self rule? It is widely believed that one year is enough. Up to within a recent period the Indian people would have been quite willing to consent to five years or even ten, if they could have been definitely and positively assured that at the end of that time self-government, real self government and not a mere semblance would be granted them. But there have been so many delays and so many disappointments, so many evaded or half-broken promises, that few now are willing to consider a time anywhere near so long.

Today nearly all the most eminent and trusted leaders, and also not a few Englishmen, believe that in a single year, or certainly in two the British government in India can, if it will, set up as its successor a native government, with every official position in it, from Viceroy to policeman, filled by fully competent Indians (quite as competent as the men who fill the positions now), and do it with no confusion or disorder attending the going out of the old and the coming in of the new and with no injustice to any interest. The Indian people are more peaceable and more law abiding and naturally more orderly than the English and if in England the government of the country can pass from one political party to another, or if one King can die and a successor assume the crown with no disturbance of the peace, surely we have a right to believe that the British masters of India can arrange for proper elections there national, provincial and local, and after

A view of Bali from the shore. Balinese boat

surpassing civilised handicrafts in an unsophisticated grace and delicacy.

Our boat left Surabaya at 9 a.m. and it touched Semelep the eastern port of Madura at about 3 p.m. thus flanking practically the entire length of the island in eight hours. Here the boat stopped for some time loading and unloading cargoes. While watching the exports and imports of the island, I noticed a smart young man in a white drill suit who had been studying me from a distance. I greeted him and he nodded gently and replied in broken English that he was trying to ascertain if I came from India. I assured him that he was right and we soon became good friends, though the range of our conversation was very limited. I gathered that my friend hailed from the island of Celebes. His name was Mr J. Walintukan and his home was at Menado in the Sander District of Celebes. He was full of praise about his native country where India is known through the Ramayana, the scenes of which are still

depicted by the people of North Celebes on painted cloth. Walintukan urged me to visit Celebes on my way back from Bali. Alas! my mind was willing but money is ridiculously unwilling to replenish the exhausted purse of a vagabond tourist. Hence I had to postpone my visit to Celebes for some future incarnation.

Early next morning I felt that the steamer had stopped somewhere. I rubbed my eyes and rushed to the deck with a view to ascertain if we were already in Bali. The captain informed me that while face to face with Bali we were still in Java. To solve this fine riddle I consulted the map and found that the island of Bali almost touches the extreme eastern port of Java, Banjuwangi where our boat was lying in anchor for the loading and unloading of cargoes from the farthestmost province of Java, called Besuki (Basuki) which shows place-names like Probolinggo, Argapura, and Situbondo. Surely the *setu bandha* or

the bridging of the ocean by Rima, did not stop with Ceylon. His worthy descendants must have ventured farther and farther till they reached the very heart of Polynesia and—who knows—probably they or their spiritual progeny of Indonesia crossed the vast expanse of the Pacific and left the relics of their manners and customs, their cosmogony and mythology, their art and iconography in far off Polynesia nay further than that, even in the so called *New World* where the symbolical elephant motif has been recently discovered in the sculptural remains of the Pre-Columbian art of America.

Njoman Kadjeng
My Guide in Bali

Our ship weighed anchor leaving the Javanese port Banguwangi and forced me to leave my historical fantasies. What a rare feast for the eyes! The morning sun lit up the sea of Java and the verdure of the Balinese coasts into an extraordinary brilliance. There is an unspeakable fascination in this greenery of the Pacific isles. I drank in the charm the whole morning through and woke up as it were from a trance when in the mid day the ship touched Buleleng the northern port of Bali. A crowd of Balinese boatmen invaded the steamer and tried to

induce me to go on shore. But I was eagerly waiting for my Balinese friend wired to from Batavia. Suddenly I discerned a young man of about twenty approaching my steamer in a small boat. This was Njoman Kadjeng the former student of the school of Gunung Sari and at present a clerk in the office of the Resident at Singaradja. He struck me as an ideal guide—a healthy unspoiled and sympathetic young man speaking just sufficient English to make himself understood. He took charge of my luggage and brought me to the shore in a Balinese boat *tambangan prahoc*. I was informed that there was no regular hotel in the island but that there are rest houses called *pasangrahan* (corresponding to our Indian *pantha salas*). So my friend deposited me and my luggage in the rest house of Singaradja, some two miles from the landing place.

IN SINGARADJA—THE CAPITAL OF BALI

The Balinese are born artists. The clean and charming roads with trees on either side supplying natural sunshade, the picturesque houses with thatched towers and rich wood carvings, the variegated dress and dignified bearing of the womenfolk, the exquisite designs of temple architecture and decorations—all combined to evoke in me the memories of an ideal village community which is so persistently aspired after in our Indian texts which once must have been the very basis of our Indian civilisation, yet which is so rarely to be seen and enjoyed in India! How strange it is that, in this far away Hindu colony so long forgotten by the Hindus I felt the inspiring touch of the bygone rural civilisation of India.

I spent the whole afternoon strolling along the village roads haunted as it were by the bewitching scenery. I was suddenly attracted by the loud music of drums and cymbals in a neighbouring house and on enquiry was informed by my friend philosopher and guide Njoman kadjeng that a folk festival was being celebrated there, as is customary on the full moon day. So our Balinese brethren observe the *tithi* celebrations like us! When I reached the house the ceremony was over and amusements were going on. It was really a funny spectacle in the spacious court yard had assembled a huge crowd and in the centre there was a gigantic lion with white mane! To reassure my nervous readers let me say at

Balinese ladies
Going to temple

the very outset that it was not a real lion but a dummy made to jump about by a clever man a specialist in animal acting! The lion is not to be found in the list of Balinese fauna. Tigers, as I heard are found in west Bali but lions are neither seen nor known to the people. So this must be a ceremonial lion imported from India along with the Indian cults. And it jumped and danced quite unceremoniously while the boys and girls were shrieking with merriment. Two men were dancing some rustic dance while the village orchestra was playing. Suddenly another actor appeared on the scene and approaching the terrible beast with rhythmic gestures and it low not with the stroke of any weapon but simply with magic *mantras* duly uttered. On the dead body of the lion (probably a symbol of Evil) was

sprinkled water and flowers by an attending priest from whom I came to know that the flowers strewn were of four different colours to propitiate the four gods Brahma, Vishnu, Siva and Indra.

While I was trying to disentangle the Indian element from this queer ceremony, I was asked by my friend to watch a black chicken which was tied all the while in an obscure corner and which was liberated now that the power of Evil had been killed by sacred mantras. This little detail made me alert at once in detecting the strain of Malay Polynesian magic in this Indo-Javanese culture.

IN THE LIBRARY OF A BALINESE PANDIT

Ever since my landing I was in search of a real Balinese scholar who might enlighten me with regard to the extant texts and traditions of Indian origin. I had the good fortune to meet just a man of that type in Pandit Dylantuk who had a splendid collection of books and manuscripts. He received me very cordially and asked me numerous questions on India and the state of indigenous learning there. I felt how in spite of centuries of separation these descendants of

The thatched towers of Bali
picture que houses hills on the background

Aryan pandits were vitally interested in Indian religion and culture. We were sitting in the outhouse on a long wooden seat, so similar to the Indian model and this Balinese

Pandit was showing me one by one, the manuscripts of the Mahabharata, the Brahmanda and Vishnu puranas, the Dharmashastra of Manu and Bhrigu, the Rajaniti or royal science of Kamandaka, etc., till I almost forgot that I was thousands of miles away from India the original home of these Shastras which I saw in their Balinese garb. What a vast field for research and how our Indian learned societies, and universities should take immediate steps to send experts in Indian palaeography and Sanskrit learning in order to collaborate with our brother pandits of Bali and Java.

A Temple of Bali

Pandit Djulantik informed me that his collection had been catalogued by a Dutch Indologist. The ancient Indo-Javaese literature written in Kawi' dialect formed part also of the old literature of Bali. At a later epoch when Islam inundated Java with the fall of the Majapahit empire in 1475, the important Hinduised families left their possessions in Java and crossed over to the island of Bali, which down to this day is free from Islamic domination. Those who consider themselves as descendants of the early Hindu immigrants are named *Wong Madjapahit* who are the *Kutins* infinitely superior to the *Bali aga* or the indigenous Balinese. It is very easy to discern the two types one flat and featureless, the other fine and handsome,

among the Balinese of to day. The *Padanda* or Pandit class resembles very much the Hindu Brahmins and I gathered that the Balinese Brahmins claim *Padanda Vahu Ravuh* (the "newly arrived") as their ancestor. Thus Bali began to offer me from day to day, sociological and cultural problems, at once fascinating and baffling.

A VISIT TO THE RESIDENCY

Thanks to Dr Bosch, Director of the Archaeological Department, my arrival at Singaradja was intimated to the Governor or Resident of the islands of Bali and Lombok, P. E. Moolenburgh. He very kindly invited me to his house, situated in a lovely spacious garden. He was somewhat surprised to find an Indian scholar coming so far in search of archeological adventure. Very soon I discovered that the Resident was a well-read man. I mentioned incidentally that we appreciate keenly in India the profound studies on Buddhism by the Dutch *salant* Henrick Kern. Mr. Moolenburgh at once told me joyously that he had had the privilege to sit at the feet of Prof Kern in order to learn Sanskrit years ago. So he would help to the best of his abilities an Indian admirer of his learned master. I had some favour to ask

and I took that opportunity to seek his aid. I knew that Njoman Kadjem was a clerk in the office of the Residency and I knew equally well that it would be very difficult for me to secure the services of another Balinese of his type, during my short stay in the island. So I requested the Resident kindly to lend me the services of Njoman Kadjem during my trip through Bali. The Resident not only granted my request but generously offered to place me under the care of Dr. Schrieke, the Director of the Ethnographic Survey who was then staying in Gianjar (South Bali) in order to study the elaborate Cremation ritual there. That was just the thing which I wanted to witness before anything else and that was why I postponed my Java trip. By a stroke of good luck or by a propitious

smile of Lord Ganesha I gained my object completely. Thanking the Resident I began to get ready for my historic tour from Singaradja on the north to Gianjar, the stronghold of Hindu culture in South Bali.

The Resident's library contains all the important books and reports on Bali, Lombok and other islands. I offer some facts that may prove interesting to my Indian friends.

Bali and Lombok were first visited by Houtman as early as 1597, and he found the people "extremely warlike" in nature, quite in keeping with the proud tradition of the native chronicle—*Usana Bali*, which names the island *Bali anka*, the lap of the strong and valiant—thus fitly expressing the bold warlike spirit of the Balinese. (Vide B. R. Chatterjees *Indian Culture in Java and Sumatra* pp. 12, Greater India Society Bulletin No. 3.)

The Balinese could not be made to acknowledge the suzerainty of the Dutch Government before 1841, although the *Susuhunan* (or chief) of Surakarta (a central Javanese State) who had theoretical rights over Bali, ceded them to the Dutch settlers as early as 1743. The grip of political control was tightened in 1841 with the consequence that there were dangerous uprisings throughout the island between 1846-1849, causing considerable drain of men and money to the Dutch Government. The nationalist opposition was so determined and organised that as late as 1894 the Dutch power had under their direct control only two provinces of Bali—Djembrana in the west and Buleleng or Singaradja in the North. All the other provinces were governed by Rajahs who were absolute monarchs, the Dutch having little more than nominal influence.

The island of Lombok was subdued in 1849 the year which also witnessed the subjugation of Karangasem (South Bali) though at the cost of the life of the Dutch general Michiels who was killed at Kusambe (? Kausambi). "But even then the spirit of resistance was not subdued." The inevitable however, happened. The Dutch Government took decisive steps between 1906-1908 during which nearly all the chiefs surrendered except a few striking cases of uncompromising patriotism. The Rajah of Badung (present Den Passar) preferred death to servitude. He laid down his life with his devoted followers rushing out in the field dying to a man like heroes. This is the exact

counterpart of the Rajput practice of plunging in mortal fight, exchanging betels for the last time. In Bali this heroic custom was known as "Paputan", which means a sortie *en masse* of the ruler and his entire court, advancing not so much with the idea to fight but to die honourably in order to avoid a dishonourable prolongation of life."

The Raja of Tabanan committed suicide in order to avoid the above humiliation. The Deva Agung (chief) of Kusambe (present Klungkung) also followed the example of the Raja of Badung in 1908, which year witnessed the final extinction of the flame of Balinese liberty.

A romantic Grotto

The whole of this chapter of history reads like the memorable pages of our Rajput history. It shows that not only Brahmanical wisdom but the heroic courage of the Kshatriyas of India were also manifest in the life of the people of Bali. With the same feeling of awe that possesses us while we visit Chitor, I started my pilgrimage through this land of the Rajputs of Indonesia.

FROM NORTH TO SOUTH BALI

The island of Bali is about 75 miles long and 10 miles broad covering an area of

road and came to *Bubunan* where we found a beautiful Balinese temple. It is built mainly of bricks with stone carvings added here and there to add to the beauty of the edifice. These temples of Bali resemble the shrines of the Hindu colony of Champa (modern Annam) which I had visited a few weeks before. The ornamental parts are more elaborate in the temples of Bali while those of Champa are more soberly designed and decorated. In fact most of the work of Bali shows a tendency to over-decoration. Somehow these specimens of plastic art of Bali strongly remind one of its superb goldsmiths' art; we appreciate the minutiae of details from close quarters but they seem from a distance to be a sort of overgrowth obstructing the view in ensemble. On the walls are seen carved figures of the Indian *Garuda* and *Naga*. Symbols are quite numerous: a curious piece of iconography appeared in a niche—a figure with human face but with the tusks of a boar riding a tortoise and a tree growing above it. What a long and forgotten history of tree, serpent and animal worship of primitive man is peeping through this iconic incarnation!

The next stage where we stopped was the village *Ringdilit* which had a Shiva temple with a pair of gigantic *Naga* figures guarding the gates and a terrific female (? *Dakini*) with banging breasts and flames shooting from her mouth. Inside the shrine I found a small wooden seat for the priest, a *Kalasa* full of water, and a few wooden ladles, probably for ceremonial use. On the walls I was surprised to find a painted wooden board depicting some mythological subjects, just like the *Pat* drawings of Bengal.

The gate of entrance is made as if it were of a superb piece of tower sawed into two halves leaving a narrow space between. The lotus motif appears very often and the temple contains numerous thatched towers in five or seven stories.

We motored down the picturesque village

road, with neat thatched houses on either side and bright innocent faces of boys and girls peering at us from a distance. In the village, *Desa Busungbise*, we had the good fortune to witness a regular village assembly (*Panchayat*) in full session. I enquired through my Balinese friend and came to know that there would be a celebration and to discuss the ways and means the village folk, as well as the members of the various village guilds, had assembled in the courtyard of the temple. I wondered if the village community of ancient India had been brought over to these Pacific isles by the Indian colonists. The orderly way in which the meeting was conducted impressed me deeply and I felt how fruitful it would be for our students of rural economics in our Indian universities to come over here and make a comparative study of the cottage industries and agriculture in India and Indonesia.

Thus skirting the hill range of Batikan (Central Bali) along its western side we reached the *Pasanggrahan* (Panthasala) or rest house of Tabanan the first important centre of South Bali. While approaching Tabanan I got a glimpse of the Indian ocean and felt that I was still in familiar waters. The Poonggawn of Tabanan committed suicide when the last attempt to preserve his independence failed between 1906-1908.

Viewing the bazaar of Tabanan we came to Den Passer. Its ancient name was Badung and the Raja of this place with his whole court sacrificed his life fighting like an Indian Rajput prince of yore. This happened in 1906 and his example was followed by several Rajas of South Bali, e.g. the prince of Kesiman and the Deva Agung of Klungkung (or Kusambe). The history of this splendid though futile heroism is still alive in the heart of the local people, who showed me with deep feeling and reverence the sites of this heroic fight for liberty.

ISHWARCHANDRA VIDYASAGAR AS AN EDUCATIONIST

(Based on Unpublished State Records)

By BRAJENDRANATH BANERJEE

II

THE Sanskrit College was originally founded with the avowed intention of fulfilling two functions—the cultivation of Hindu literature and the gradual diffusion of European knowledge.* In May 1827 the General Committee of Public Instruction introduced an English class into the college for teaching European science to the students and enabling them to translate occidental ideas into the vernacular literature of Bengal. This arrangement, however, proved a failure, and the English class was abolished on 31st December 1835. In October 1842 the Council of Education restored the English class with two masters but with no better success. Vidyasagar saw the defect in the principle on which the English studies had been hitherto conducted and he felt the necessity of strengthening the Department. It was his intention that the students of the Sanskrit College should be well-versed in both Sanskrit and English, in order that they might prove most efficient vernacular teachers, as well as create a new and enlightened Bengali literature. In the following letter to the Council of Education dated 16th July 1853 he represented the need of recasting and strengthening the staff of the English Department and, to attain his object, he claimed the benefit of the orders of the Home Directors in their Despatch No 1 of 1841 regarding the continuance of the original assignment for the improvement of Oriental colleges.

"I have the honour to state for the information of the Council that the last Junior Class now contains 58 pupils and that further admission into it has become quite impracticable. Applications for admission are constantly received. To meet this demand it is necessary to form an additional Junior Sanskrit Class, which will require an outlay of not less than Rs. 30 per mensem for the services of a competent teacher. Should this proposition be sanctioned, the Sanskrit instructive establishment will be complete and there will be no necessity of any further extension in this department.

I beg leave to embrace this opportunity of again bringing to the notice of the Council the

necessity of strengthening the English Department of this college. Under present circumstances, five teachers are absolutely required for the efficiency of this department, which will require an outlay of Rs. 360 per mensem, as noted in the margin.

1 Professor of Literature	Rs. 100
1 Professor of Mathematics	" 100
1 First Junior Master	" 80
1 Second do	" 50
1 Third do	" 30
	<hr/> Rs. 360

The salary of the three present English teachers together with that of the Professor of Sanskrit Mathematics whose services will be dispensed with amounts to Rs. 282 per mensem so that, on this account, Rs. 78 a month are required to be paid from the funds assigned to the institution.

This amount added to the Rs. 30 required for the services of a Junior Sanskrit teacher, will entail an additional expenditure of Company's Rs. 108 per month or Company's Rs. 1,296 per annum. The total disbursements of the year 1852-53 have been Rs. 19,496-1-6 and the proposed additional charge will bring up the annual expenditure to Company's Rs. 20,792-1-6 being Rs. 3,207-14-6 under the annual assignment of Company's Rs. 24,000.

There appears to be some misapprehension in regard to this annual grant of Company's Rs. 24,000 and I am anxious therefore to enter an explanation on the subject.

It would appear from your letter No 596 dated the 22nd March 1850 to the late Secretary of this institution that the Council were under the impression that the sum of only Company's Rs. 17,694 per annum had been appropriated to the maintenance of the Sanskrit College. On this point I beg most respectfully to draw the attention of the Council to the following facts.

In 1821 when the college was founded the Government made a separate grant of Rs. 24,000 per annum for the maintenance of the institution.

The Resolution of the Government of India, dated the 7th March 1835 ordered the abolition of the stipendiary system, the discontinuance of the printing of Oriental works and the employment of the savings therefrom in imparting to the native population a knowledge of English literature and science through the medium of the English language. It must be confessed that by this resolution all funds came to be considered as one and there ceased to be for a time any separate fund for any particular institution.

When in 1839 the question relating to the appropriation of funds assigned to particular institutions came before Lord Auckland, the then

* Resolution dated 21 Aug. 1821. See *Sharps Selections from Educational Records*, p. 79.

2300 square miles From the general outline Bali seems to be a big tortoise heaving out of the sea of Java North Bali is separated from the South by a chain of mountains crossing the island from East to West The highest peak in the range is the volcanic peak of Gunung Agung (12 379 ft)

Architectural decorations
in a Balinese temple

The total population of Bali is about 960 000 The neighbouring island of Lombok which is almost of the same size contains almost an equal number of souls than two islands showing the total population of 1 541 931 According to the latest census (31 Dec 1925) of the various foreign peoples distributed in Bali and Lombok there were 7 13 Chinese 1031 Arabs 332 Europeans and

277 natives from British India as we find in the official census of 1920

Before starting my itinerary I had to study the map of Bali which I reproduce herewith and I add a few details for the benefit of future tourists from India I have said before that Bali resembles a tortoise in

its outline now the western projection of the island the neck of the tortoise is like the extreme west of Java least interesting from our point of view The number of the Hindu temples or *Poera* are very few and there are only two Brahmin chiefs or *Punggawa* that of Djembrana and of Mendjo A controleur of the Dutch government is posted in Negara (? nagara) which only shows a few miles of roads the rest being hilly and difficult of access We notice a few peaks Grogak 1414 feet Merbuk (1350 feet) and Malaya

Similarly the extreme east of Bali is hilly and uninviting to tourists Here we find the highest peak of Bali Gunung Agung (13 422 feet) Here we also find the highest lake or *danau* of Bali the lake Batur between Mt. Batur (1717 feet) and Mt. Ahang (2152 feet) The place of the controleur is at Karangasam

There are three other *danau* or lakes in the hill ranges of central Bali Bratan Bujan and Tamblingan

There we find that the middle portion of the island both to the north and to the south of the volcano range in the centre is most interesting from archaeological and other points of view I proceeded forthwith to study the ways and means of visiting this area I was in Singaradja the capital of Bali and Lombok and the Resident and his staff gave me their expert advice So I was enabled to see more than I ever expected

In the north central part (the back of the tortoise) we find several centres of native

Hindu pantheon of Bali
Vishnu on Garuda at the centre

Punggawas at Pengastulan Subunan Bandjar Pandji hubutambahan Sawan Bondalem Tedjakula (? Teja kula) Kintamani (? Chintamani) and others.

But for the most interesting relics of Hindu religion and art we must make a thorough survey of South Bali a veritable museum of Indo Balinese culture. I cannot resist the temptation of giving a few place names, the centres of the *Punggawa* of south Bali Kesiman Sukawati, Satria, B-bitra, Kediri, Kapal Antasari Badjri Marga. Pajangan Madargan Susut and Bangli. I had already an introduction from Mr Kunt, on Tyokarda Gde Rika, the chief of Ubud near Sukawati. Now I had the invitation to the rare cremation ceremony of the princely house of Gianjar considered to be the leader of Balinese orthodoxy a sort of a Rana of Udaypur amongst these Balinese Rajputs. Consequently in the *sradha* ritual of Gianjar, not only all the *Punggawas* of Bali but many chiefs of Java as well (some

of them Mohammodan) assembled in that function affording me the unique opportunity to observe and study the life of Bali in that concentrated aspect.

My friend Njomau Kidjen was quite happy to get a few days leave from his office and the chance to witness the grand celebration at Gianjar. He made all arrangements about our trip the most important item being the hiring of an automobile. He brought an Arab dealer *Ali bin S gaf* who struck me as a shrewd man a typical descendant of the race which by their maritime and commercial venture as much as by their adaptability to new environments deprived the Hindus of their pre dominant position in Indonesia. After some inevitable discussions on the difficulty of the roads, the cost of living and so forth the Arab agreed to place one of his cars at my disposal for a journey to and from Gianjar for seventy guilders.

We followed the north western coast

Governor General of India, in his celebrated Minute on Native Education dated Delhi the 24th of November 1839 His Lordship after taking a review of money estimates and of local wants arrived at the conclusion that the funds assigned to each Oriental seminary should be restored to and employed exclusively for the purposes of that seminary. His Lordship observes 'I see no advantage to be gained in this case by a close contest for strict constructions and having taken a review of money estimates and of local wants I am satisfied that it will be best to abstract nothing from other useful objects while I see at the same time nothing but good to be derived from the employment of the funds which have been assigned to each Oriental seminary exclusively on instruction in or in connection with that seminary. I would also give a decided preference within these institutions to the promotion in the first instance of perfect efficiency in Oriental instruction and only after that object shall have been properly secured in proportion to the demand for it would I assign the funds to the creation or support of English classes. At the same time I would supply to the General Committee of Public Instruction from the revenues of the State any deficiency that this resolution might cause in the general income at their disposal. And if they should already have partially used for other objects the savings arising from the seminaries supported by special funds I would in recalling such savings protect the General Committee from loss on that account (see Appendix page vi of the Report of the General Committee for the year 1839-40)'

On receipt of Lord Auckland's Minute, the late General Committee of Public Instruction in their monetary statement concerning the Sanskrit College noted in the margin distinctly stated that the allowance of the Sanskrit College was Rs 2,000 per mensem when they reported to Government on the state of colleges and schools under their control and on the measures which they considered requisite and expedient for the promotion of efficient education by means of these institutions in accordance with the principles and sentiments recorded in Lord Auckland's Minute (see the letter of the General Committee No 103) dated the 30th October 1840 in the Appendix No. II to the above Report)

Allowance Rs. 2,000	Present	Proposed
Secretary	100	100
Asst. Secretary	50	50
Udants	637-5-4	720
Natural Philosophy teacher	80	90
Establishment	140-10-8	151
Stipends	29-10-8	0
Prizes	100	12
Books and Contingencies	0	0
Scholarships	0	38

The Honourable the Court of Directors, in their Despatch No. 1 of 1841 dated the 9th January 1841 confirmed the views of Lord Auckland regarding the restoration and appropriation of funds assigned to each Oriental seminary. The Honourable Court of Directors in reference not only to the desire which has been manifested by numerous and respectable bodies of both Muhammadans and

Hindus but also to more general considerations it is our firm conviction that the funds assigned to each native college or Oriental seminary should be employed exclusively on instruction in or in connection with that college or seminary giving a decided preference within those institutions to the promotion in the first instance of perfect efficiency in Oriental instruction.

o We are aware that the opinions which we have now expressed favourable on the one hand to the application of the funds belonging to the native colleges or seminaries for Oriental instruction in the first instance and on the other hand to the diffusion of European instruction involve an increase of expense to the State. To this we are prepared to submit concurring as we must do in the opinion which our Governor General has expressed of the insufficiency of the funds hitherto allotted to the purposes of public instruction in India. You have therefore our authority to make up any deficiency in the income now at the disposal of the General Committee which may be occasioned by restoring the allowances of several Oriental colleges to the purposes for which they were originally made' (see pages cli & cliii of the Appendix No IV to the above Report)

That the assigned allowance of the Sanskrit College amounting to Rs 24,000 per annum has not been subsequently curtailed to a less amount appears from the fact that the Accountant General every year credits Rs 24,000 on account of the Sanskrit College and after debiting its annual expenditure amounting to Company's Rs. 19,000 and some odd hundreds, credits the surplus in favour of the Council.

With due deference and submission I would beg leave to observe that from the facts stated above it is clear that the allowance assigned to the Sanskrit College amounts to Rs. 24,000 per annum that this amount ought to be exclusively employed to the purposes of the Sanskrit College so long as the community may desire to avail themselves of the advantages afforded by this institution and that after provision shall have been properly made for imparting Sanskrit learning in proportion to the demand for it, the funds ought to be assigned to the creation or support of English classes.

I further beg leave to remark that it nowhere appears that the Rs. 17,691, alluded to in your letter mentioned before is the only grant appropiated to the maintenance of the Sanskrit College. In 1840 Rs. 17,691 were sanctioned by the Government of India as the then required annual expenditure of the institution. It cannot be inferred from this, that this sanctioned annual expenditure was fixed upon by Government as the maximum allowance of the Sanskrit College. In that same letter of Government which sanctions the annual expenditure of Rs. 17,691 mention is distinctly made that the funds assigned to each Oriental seminary should be exclusively employed to the purposes of that seminary (see pp cxxvii & cxli of the Appendix No. III to the above Report).

In conclusion I beg leave to observe that under these circumstances the Sanskrit College appears to be fully entitled to have an additional Junior Sanskrit class, there being great demand for Sanskrit learning, as appears from the number of candidates for admission and as well as to a further outlay for placing its English classes on

an efficient footing as long as the expenditure does not exceed the allowance assigned to the institution

I further beg leave to observe that if an extended and improved system of vernacular education in Bengal be carried out and the Sanskrit College be regarded in the light of a Normal School to meet the increased demand for a higher order of Bengali teachers that will arise it will be unable to meet this demand without a considerable extension of its present classes.

The Council was satisfied that the outlay proposed by Vidyasagar would be most beneficial in encouraging the combined study of English and Sanskrit and secured the sanction of the Government of Bengal to the pandits' proposal.

A better regulated and a more extended plan of studies was introduced into the English Department in November 1853 with great success. The following members composed its staff—

Prasanna Kumar Sarvadikari—

Professor of Literature

Rs 100

Srinath Das—Professor of Mathematics

100

(Three other masters)

The study of mathematics through the medium of Sanskrit was found less profitable than its study through English and therefore an English mathematical class was started. Vidyasagar now made English a compulsory subject in the institution.

After Vidyasagar had introduced the above improvements in the Sanskrit College and was contemplating the re-organization of the English Department the Council of Education wanted the celebrated scholar Dr J R Ballantyne Principal of the Benares Government College to visit and report upon the Calcutta Sanskrit College. In this connection they wrote to the Bengal Government as follows—

The Government is aware that great and important changes have been introduced into this institution since the appointment of its present able and energetic Principal. These measures have apparently already begun to bear good fruit and as the institution is likely to become extremely useful under its present management, the Council are anxious to have the opinion of the most able Sanskrit scholar in India regarding the measures now in progress and those contemplated hereafter.

The following observations made by Dr Ballantyne who paid a visit to the Calcutta

Sanskrit College sometime in July—August 1853 at the invitation of the Council explain the situation—

"From my personal intercourse with the accomplished Principal Ishwarchandra Vidyasagar I have derived the gratification I was led to anticipate both by his reputation and by his report on the college on which the Council sometime ago did me the honour to request my opinion.

With the arrangement of the classes in the Sanskrit College and with the apparent zeal both of teachers and pupils I have been much pleased. The course of studies (if the appliances of the institution suffice for its being completely carried out) is very full especially in the English division of the course. On some points of detail in regard to the selection of class books I may have occasion to offer remarks in the sequel. Leaving out of consideration here various topics on which I shall hope to have opportunities of consulting with Pandit Ishwarchandra by letter I address myself to the question which I conceive the Council to have proposed to me—Is there anything in the working of the Calcutta Sanskrit College or of the Benares Sanskrit College which might be advantageously adopted by the one from the other? To reply briefly I think there is in both—although in consequence of the differences of local circumstances the two institutions may still judiciously be left to differ in several respects. The head of the institution is not the type of administrative wisdom and uniformity is dearly purchased when purchased by the sacrifice of more serious interests.

A noticeable source of distinction between the two institutions is the fact that the Benares Sanskrit College contains no Bengalis while the Calcutta College contains nothing else. The Bengalis who are students of Sanskrit College, participating in the general desire for the acquisition of English which they see in those around them may advantageously be introduced to the study of English at that point in the course which Pandit Ishwarchandra has fixed upon. It does not follow that the same arrangement would work well at Benares. To supply instruction to him who craves it and to force instruction on him who does not seek it are very different things. At the same time I quite approve of its being compulsory as it is now in the Sanskrit College to begin English at the stated date whether the pupils feel inclined to it or not this arrangement being rendered indispensable by the system of class teaching the introduction of which into the Calcutta Sanskrit College has been effected by its present Principal. On the advantage of the class system in enabling the same teacher to take charge of a very much greater number of pupils it is unnecessary to dwell. Of the difficulties in the way of adopting the system to the same extent, at Benares this is not the occasion to speak of.

* In present misconception here (a misconception which has been sometimes turned to mischievous account) it may be observed that it is the Sanskrit College of Benares that is spoken of and not the English school associated with it under the same roof. The English school is indeed mainly recruited by Bengalis but the application of a Bengali for admission into the Sanskrit College of Benares is a thing scarcely known.

* *Elucet in Consultation* 22 Sept 1853 No 44

† Letter from F J Moulton Secretary to the Council of Education to Cecil Beadon Secretary to the Government of Bengal dated Fort William 21st May 1853—General Dept Con 16 June 1853 No 43

may suffice here to remark that the Bengali boys are in general more pliant than those of the Upper Provinces and that Calcutta is so far inoculated with Anglican feeling consciously or unconsciously that an argument from Calcutta to the Upper Provinces is very apt to mislead. This holds also conversely and therefore I would offer any suggestion for the imitation of either college by the other under this express proviso that regard be had to the different circumstances of the two places.

Holding then generally that the Sanskrit course, in the Calcutta Sanskrit College is a good one and also (with a complete staff of teachers) the English course, I yet desiderate sufficient provision for obviating the danger that the two courses may end in persuading the learner that truth is double. This danger is no chimerical one. To take an example I am acquainted with Brahmans who being well versed in Sanskrit literature and also familiar with English are aware that the European theory of logic is correct and also the Hindu theory while at the same time, they cannot grasp the identity of the two in such a way as to be able to represent the processes of the one in the language of the other. If this be the case with the very best of those who have studied both Sanskrit and English independently it is not likely that the case will be different with the general run of pupils similarly trained. One reason why this is to be regretted is that men so educated cannot satisfactorily communicate to their educated fellow countrymen who are unacquainted with English much of that valuable knowledge which they themselves have gained through the English. They cannot show that our English sciences are really developments and expansions of truths the germs of which the Sanskrit systems contain and therefore to the mind of their hearers those valued germs appear to be ignored by or opposed to English science, when they might easily be shown to be involved in it. It is unnecessary to dwell upon this consideration because the very constitution of the present Sanskrit College with its English course and its Sanskrit course implies the understanding that it is desirable to train up a body of men qualified to understand both the learned of India and the learned of Europe and to interpret between the two removing unnecessary prejudice by pointing out real agreement where there was seeming discordance and conciliating acceptance for the advancement of science of Europe by showing that European science recognizes all those elementary truths that had been reached by Hindu speculation.

With the view of determining what points in the Hindu system corresponded with points in European science some years ago I took up the system called the *Ayaya* and (in a work now partly printed in Sanskrit and English under the title of a *Synopsis of Sciences*) I showed the points in that comprehensive system from which our various sciences branch out. Some portions of this work I have read and discussed with Pandit Ishwarchandra in company with one of my co-adjutors Pandit Vethala Shastri of the Benares College. Pandit Ishwarchandra promises to introduce it to the notice of his classes and to communicate to me by letter any doubts or difficulties that may arise in the course of the study so that the crudenesses incidental to a first attempt of such a

kind may be gradually eliminated in due time. The next volume will commence with the theory of Inductive Investigation. In dealing with this important branch I hope to enjoy the advantage of Ishwarchandra's co-operation. I observe that he places in his last Mill's great work on the subject. As introductory to the perusal of that work I have prepared an abstract of it in which I have traced to some extent the correspondence between its technical terminology and that of the *Nyaya* system in its treatment of the same topics. This abstract (printed by order of Government N.W.P.) being from its price etc. more suitable for a class book than the entire work, I propose its adoption into the course. At the annual examinations, I should be glad to supply questions on this and other works here suggested the replies to which might not only furnish evidence as to the progress of the pupils but might be so contrived as to lead to a still more complete determination of the way in which the mind of the native literate might be best conciliated to Baconian speculations.

Besides the *Nyaya* system there are two other systems taught in the college viz. the *Sankhya* and the *Vedanta*. A text book of each of the three has been printed with English version and notes for the use of the Benares College. This might with equal advantage be read in the Sanskrit College here, and the criticism both of the pupils and of the teachers might here also lead to a more complete determination of the precise relation between the philosophical nomenclature of India and of Europe. As there is much in the two systems last named that finds its counterpart in the speculations of Bishop Berkeley I have reprinted Berkeley's *Inquiry* with a commentary indicative of these correspondences. I should like that the acuteness of the Calcutta Sanskrit College should be brought to bear upon this exposition also. Where speculation in countries so widely separated as India and Europe, has arrived at similar or identical conclusions, the conviction of the fact should naturally tend to beget mutual respect and mutual respect must naturally tend to facilitate the reception by the less advanced nation of the science and philosophy of the more advanced one.

In offering these remarks and suggestions I have had in view almost exclusively the desirableness of bridging the chasm between the Sanskrit and the English—between the learning of India and the science of England because the endeavour to bridge the chasm is what peculiarizes the measures introduced within the last few years into the Benares College and it was this peculiarity (if I mistake not) that attracted the attention of the Council. Pandit Ishwarchandra is perfectly competent to work the same system and to aid me in improving it. As the Sanskrit College at present stands there is a good Sanskrit course and a good English course but the pupil is left to determine for himself whether the principles inculcated in these correspond to one another or altogether conflict or correspond partly and if so how far not, as we have seen, determine it satisfactorily at all and therefore (not in the way of substitution for any part of the established course but as an additional feature necessary to the completion of the design) I have suggested the employment of the treatises above-mentioned.

If the general principles of this report obtain the approval of the Council as I have reason to believe they have the concurrence of the intelligent Ishwarchandra I shall co-operate with him most gladly in the endeavour to complete the arrangements for such a course of Anglo-Sanskrit education as shall raise up successive bands of men qualified thoroughly to interpret the mind of Europe to that of India for this is indeed the great end of such an institution as we may hope for to the Sanskrit College.

On 29th August, 1863 the Council passed the above report in the original on to Vidyasagar, requesting him to report upon the same. Vidyasagar materially differed from Dr Ballantyne's plan of study and sent the following reply to the Council —

In reply I beg leave to state that I am very happy to observe that all the measures lately introduced into this institution have met with the entire approbation of a man of Dr Ballantyne's talents and abilities.

With regard to the adoption of class-books recommended by Dr Ballantyne I regret to say I cannot agree with him on all points. He appears to recommend the adoption of his abstract of *Milla's Logic* in substitution of the original. Under the present state of things the study of *Milla's* work in the Sanskrit College is in my opinion, indispensable. Dr Ballantyne's principal reason for recommending the abstract seems to be the high price of *Milla's* work. The students are now in the habit of purchasing standard works at high prices. So we need not be deterred from the adoption of this great work on that consideration. Dr Ballantyne's abstract might be read to quote his own words, as introductory to the perusal of that work. But the great author himself in his preface, strongly recommends Archbishop Whately's treatise on *Logic* as the best introduction to his work. I therefore leave the matter to the decision of the Council. Dr Ballantyne also recommends to adopt as class-books three text-books of each of the three systems of philosophy — Vedānta, Nyāya, and Sāṅkhya — printed with the English versions and notes. Of these the *Vedāntasara* text book on Vedānta, is already a class-book here and its version in English might be read with advantage. The two other text books recommended by him the *Tārakāṅgala* the text book on Nyāya and the *Tittakāṅgala* that on the Sāṅkhya, are very poor treatises in their own departments. We have better treatises in our curriculum. With regard to Bishop Berkeley's *Inquiry* I beg to remark that the introduction of it as a class-book would beget more mischief than advantage. For certain reasons which it is needless to state here we are obliged to continue the teaching of the Vedānta and Sāṅkhya in the Sanskrit College. That the Vedānta and Sāṅkhya are false systems of philosophy is no more a matter of dispute. These systems, false as they are command unbounded reverence from the Hindus. Whilst teaching these in the Sanskrit course we should oppose them by sound philosophy in the English course to counteract their influence. Bishop Berkeley's *Inquiry* which has arrived at similar or identical conclusions with the Vedānta or Sāṅkhya and which is no more considered in

Europe as a sound system of philosophy will not serve that purpose. On the contrary when by the perusal of that book the Hindu students of Sanskrit will find that the theories advanced by the Sāṅkhya and Vedānta systems are corroborated by a philosopher of Europe, their reverence for these two systems may increase instead of being diminished. Under these circumstances I regret I cannot agree with Dr Ballantyne in recommending the adoption of Bishop Berkeley's work as a class-book.

I also beg leave to state that I cannot quite agree with Dr Ballantyne when he admits that both the Sanskrit and English courses in the Calcutta Sanskrit College are good and yet denounces sufficient provision for alleviating the danger that the two courses may end in perverting the learner that truth is double? This danger, says Dr Ballantyne is no chimerical one. To take an example, he contends I am acquainted with Brahmans who being well versed in Sanskrit literature and also familiar with English are aware that the European theory of logic is correct, and also the Hindu theory while at the same time they cannot grasp the identity of the two in such a way as to be able to represent the processes of the one in the language of the other? I believe the danger that Dr Ballantyne apprehends is not so inevitable in the case of an individual who has intelligently studied both English and Sanskrit sciences and literatures. Truth is truth if properly perceived. To believe that truth is double is but the effect of an imperfect perception of truth itself — an effect which I am sure to see removed by the improved courses of studies we have adopted at this institution. It must be considered as a singular circumstance if an intelligent student cannot perceive identity of truths where there is real identity. Suppose students read logic or any other department of science or philosophy both in Sanskrit and English. If they be so fed to assert, that the European theory of logic is correct and also the Hindu theory, while at the same time they cannot grasp the identity of the two in such a way as to be able to represent the processes of the one in the language of the other the hearer is naturally led to conclude that either they could not comprehend the subject with sufficient clearness or that their familiarity with the language in which they are found unable to express themselves is not sufficient. It must be confessed however that there are many passages in Hindu philosophy which cannot be rendered into English with ease and sufficient intelligibility only because there is nothing substantial in them.

I further beg leave to state that I regret I cannot but differ a little from Dr Ballantyne when he observes that the very constitution of the present Sanskrit College with its English course and its Sanskrit course implies the understanding that it is desirable to train up a body of men qualified to understand both the learned of India and the learned of Europe and to interpret between the two removing unnecessary prejudice by pointing out real agreement where there was seeming discordance and pointing out apparent for the advancement of science of Europe by showing that European science recognises all those elementary truths that had been reached by Hindu speculation. It is not possible in all cases I fear that we shall be able to show real agreement between

European science and Hindu shastras. Even if we take it for granted that we shall be able to point out agreement between the two it appears to me to be a hopeless task to conciliate the learned of India to the acceptance of the advancing science of Europe. They are a body of men whose longstanding prejudices are unshakable. Any idea when brought to their notice either in the form of a new truth or in the form of the expansion of truths the germs of which their shastras contain they will not accept. It is but natural they would obstinately adhere to their old prejudices. To characterize them as a class I can do no better than quote the words of Omar. When Amru the Arab General the conqueror of Alexandria wrote to Omar about the disposal of the Alexandrian library the Caliph replied 'The contents of those books are in conformity with the Quran or they are not. If they are the Quran is sufficient without them if they are not, they are pernicious. Let them therefore be destroyed.' The bigotry of the learned of India, I am ashamed to state is not in the least inferior to that of the Arab. They believe that their shastras have all emanated from omniscient Rishis and therefore, they cannot but be infallible. When in the way of discussion or in the course of conversation any new truth advanced by European science is presented before them they laugh and ridicule. Lately a feeling is manifesting among the learned of this part of India especially in Calcutta and its neighbourhood that when they hear of a scientific truth the germs of which may be traced out in their shastras instead of showing any regard for that truth they triumph and the superstitious regard for their own shastras is redoubled. From these considerations I regret to say that I cannot persuade myself to believe that there is any hope of reconciling the learned of India to the reception of new scientific truths. Dr Ballantyne's views may be successfully carried out in the North-West Provinces where his experience has made him arrive at his conclusions with regard to the learned of India.

But in Bengal the case is different. His remarks that regard be had to the different circumstances of the two places and that the bed of Procrustes is not the type of administrative wisdom are very judicious. The local circumstances of this part of India compel us to pursue a different course for the dissemination of sound knowledge. I have with care and attention observed the state of things here and my impression is that we should not at all interfere with the learned of the country. We do not require to get them reconciled because we do not require their assistance in any shape. We need not fear the opposition of a body declining in their reputation. Their voice is gradually becoming more and more feeble. There is little chance of their regaining their former ascendancy. To whatever part of Bengal is the influence of education extending, there the learned of the country are losing their ground. The natives of Bengal appear to be very eager to receive the benefit of education. The establishment of colleges and schools in different parts of the country has taught us what we can do without attempting to reconcile the learned of the country. What we require is to extend the benefit of education to the mass of the people. Let us establish a number of vernacular schools let us prepare a series of

vernacular class-books on useful and instructive subjects, let us raise up a band of men qualified to undertake the responsible duty of teachers and the object is accomplished. The qualification of these teachers should be of this nature. They should be perfect masters of their own language, possess a considerable amount of useful information and be free from the prejudices of their country. To raise up such a useful class of men is the object I have proposed to myself and to the accomplishment of which the whole energy of our Sanskrit College should be directed. That the students of our Sanskrit College, when they shall have finished their college course will prove themselves men of this stamp we have every reason to hope. Nor is this hope an illusive one. That the students of the Sanskrit College will be perfect masters of the Bengali language is beyond any possible doubt. If the contemplated new organization of the English Department be sanctioned there is every possibility of their being able to attain considerable proficiency in the English language and literature and thereby acquire a considerable amount of useful information. It is very gratifying to observe that they have lately begun to think in such a way as to promise that hereafter every qualified student will be found free from all the prejudices of his countrymen. As a specimen of what may be expected from the Sanskrit College here, I beg leave to enclose herein an English translation of a Bengali essay of the past session by a senior student (Ramkamlal Sharma—student of the Philosophy class) of this institution who has still about three years to finish his collegiate course and has yet made but little progress in the English language and literature.

In conclusion, I beg most respectfully to state that if I may be so fortunate as to be permitted to carry out the system introduced, I can assure the Council with great confidence that the Sanskrit College will become a seat of pure and precious Sanskrit learning and at the same time a nursery of improved vernacular literature, and of teachers thoroughly qualified to disseminate that literature amongst the masses of their fellow-countrymen."

The Council considered the whole matter on 14th September, 1883 and passed the following orders, a copy of which was forwarded to Vidyasagar, for his information, on the 22nd —

'That the Council are gratified to find that Dr Ballantyne reports generally so favourably on the present course of instruction and state of progress in the Sanskrit College, and that the Principal of the college be informed that he will be expected by the Council to continue that course, the success of which must however obviously depend on the competency of the teachers employed to give instruction in the most advanced works of Mental Philosophy by English as well as by Sanskrit authors, that for the attainment of such success the Council relies mainly on the great zeal and ability of the Principal himself and that they would at the same time desire the Principal freely to avail himself of the Abstracts and Treatises compiled by Dr Ballantyne, the use of which must be in the highest degree valuable

in explaining and illustration of the subjects of his own instruction. Of those of the institute not from India, all students of Sanskrit were included in this plan of the Institute, and I derive credit from a family with Dr. Ballantyne was. The Principal will also be in frequent communication with Dr. Ballantyne on the progress of his class, and the Council will wish to see a free interchange of ideas between the heads of the two important institutions at Benares and in Calcutta with a view to the continuing improvement of their several courses of instruction and to the establishment as far as possible of a common terminology in the teaching from English into Sanskrit or the uses of the original expressions in use in each language respectively in the exposition or discussion of philosophical subjects."

This correspondence throws a very interesting light on the attitude of Vidyasagar towards the Hindu shastras. Contrary to what one would expect from Vidyasagar's deep Sanskrit learning, he had not the slightest bias towards shastric teaching. He was a rationalist and an eminently practical man. He grasped the fact very clearly that a blind admiration for the ancient shastras stood in the way of the acquisition of western knowledge. He was intensely eager that the Indian mind should be imbued with western knowledge, and this is the reason why he advocated so strongly the improvement of the English Department of the Sanskrit College. It is to be regretted that in his zeal for practical ends Vidyasagar could not find anything useful in the Indian systems of philosophy. In his letter to the Council he says "For certain reasons, which it is needless to state here, we are obliged to continue the teaching of the Vedanta and Sankhya. That the Vedanta and Sankhya are false systems of philosophy is no more a matter of dispute." When English education was first introduced into this country, a section of the orthodox pandits vehemently opposed it, declaring that everything useful was to be found in the teachings of the omniscient Rishis, and that English education was not only useless but also subversive of all social order. A reaction, however, soon set in, and a reformed section of the Hindu public went to the opposite extreme and declared that there was nothing useful to be found in the Hindu shastras. Vidyasagar, though a Brahman pandit, showed the bias of the reformed section. Though appealing to the teaching of the Hindu systems of philosophy, which he did only for expediency, he lacked the breadth of vision of Rammohun Roy who understood both the eastern and

the western standpoints. In spite of his orthodox training and heritage, Vidyasagar's outlook was remarkably similar to that of a modern European. In everything he undertook, he took up an essentially practical standpoint and showed the pertinacity and indomitable energy of John Bull.

Vidyasagar had applied himself heart and soul to remodelling the institution under his charge, and the Council's present orders tilted him with honest indignation. He could not brook interference with his work and would not deviate an inch from what he thought right as will be seen from the following demure official letter which he wrote to Dr. Mead on 5th October 1853 —

"My dear Sir — After the most attentive consideration of the orders of the Council in reference to Dr. Ballantyne's report on the Sanskrit College, I feel compelled to inform you that those orders, if carried out in their entirety, will involve a degree of interference with the scheme of study lately adopted by me with the sanction of the Council that will not only diminish the position in the college somewhat unpleasant but will tend, I am convinced, to impair the usefulness of the institution as a whole."

In the hurry and bustle of closing the college and of preparing to leave home I am unable to write officially on the subject. But before I leave Calcutta I am anxious to state to you briefly some of the more important objections to the carrying out of Dr. Ballantyne's plan which have occurred to me.

I am at present at least I am unwilling to mix up with the discussion of an important matter any question of a personal character in being forced to adopt a plan of study which I cannot approve of or in being obliged to communicate to a fellow Principal in the same position in the service with myself on the progress of my class — conditions which I suspect few other Englishmen will be found to submit to. Waiving such personal considerations I will come at once to the real question at issue.

Dr. Ballantyne's suggestions seem to me to be based upon the assertion that without their aid upon the danger of the Anglo-Sanskrit scholar being a follower of double-truth cannot be avoided. I will not pretend to question the Doctor's experience among his learned friends at Benares. But of this I am certain that not a single instance can be pointed out in that of any sensible man who has studied English as well as Sanskrit being persuaded that truth is double."

Leave me to teach Sanskrit for the leading purpose of thoroughly mastering the vocabulary and let me surpass it to the acquisition of sound knowledge through the medium of the English and you may rest assured that before a few years are over I shall be enabled, if supported and encouraged by the Council, to furnish you with a body of young men who will be better qualified by their thoroughness in the English language and by their possession of information than it has hitherto been possible to accomplish through the instrumentality of the educated clerics of any of your colleges."

whether English or Oriental To enable me to carry out this great—this darling object of my wishes I must (excuse the strong word) to a considerable extent be left unfettered So far as I can approve of Dr Ballantyne's abstracts and treatises—such for instance as his excellent edition of the *Novum Organum* in English I will avail myself of them most readily and cheerfully But if compelled to adopt all his compilations without any reference to my own humble judgment as to their utility and value or to their adaptation to the peculiar wants of the institution over which I have the honour to preside my occupation is gone Such a system would break in upon and interrupt my own plan of instruction and in spite of my sense of duty as a servant of the Council the responsibility which I now keenly feel will be assuredly weakened if not destroyed

I hope these hints somewhat ramblingly and hastily thrown out, will receive the kind and indulgent consideration of the Council so as to induce them to modify their Resolution of the 14th ultimo so far as not to make the course of study in the Sanskrit College a compulsory one.

If required I shall be happy to send in an official and consequently a more formal letter on the subject after the termination of the holidays

This letter it appears had the desired effect and Vidyasagar was left to pursue his own plan of teaching

The Council were satisfied with the working of the new schemes launched by Vidyasagar and they raised his salary to Rs. 300 a month with effect from January 1854 That his introduction of various reforms in the Sanskrit College had actually done much good, is evident from the following passage in the report of the Director of Public Instruction (who succeeded the Council of Education in Jan'y 1854) for May 1855 to April 1856 —

The course of instruction at the Sanskrit College adapted as it has of late been to modern ideas and to purposes of practical utility is being successfully carried on and administered by its able Principal Pandit Ishwar Chandra Sharma, and is producing results the effects of which upon the education of the lowest classes cannot be over-rated

Vidyasagar possessed the gift of choosing the right type of man for his subordinates which, to a great extent, contributed to his success

He had won the esteem of the officials, who often approached him for help in educational matters When the College of Fort William was abolished in January 1854 and a Board of Examiners formed in its place, the pandit was made an ex officio member of the Board Frederick Halliday—a member of the Council of Education and the first Lt Governor of Bengal, greatly appreciated Vidyasagar's labours It was in accordance with his directions that the Council wrote to Vidyasagar on 18th July 1854 asking him to visit the vernacular school at Bumunmurah, situated about two miles east of Barasat Vidyasagar visited it on 23rd July 1854 and submitted his report, dated 22nd August 1854, to the Secretary of the Council*

To conclude with the fitting words of the late Ramesh Chandra Datta —

The fame of the young and enthusiastic educationist spread far and wide. The greatest and most enlightened zamindars of Bengal reckoned him as their friend Eminent literary men welcomed their new colleague. Englishmen inspired with a sincere desire to help the cause of progress in India found in Vidyasagar a worthy collaborator. For Vidyasagar was versed in the learning of his forefathers and the traditional knowledge of the past. He had won high distinction by his Sanskrit learning and had become the Principal of the Sanskrit College. And more than this, his open mind received and assimilated all that was healthy and life-inspiring outside the range of Indian thought and with a robust physique and a robust heart he ceaselessly endeavoured for reform

(Concluded)

A DECADE IN THE PUNJAB

By NAGENDRANATH GUPTA

IN May, 1891, I left Sind to take up the editorship of the *Tribune* at Lahore. That paper used to be published twice a week at that time. The office and press were located in an unpretentious house in Anarkali Bazar. There was a large courtyard in front of the house, where public meetings were held. The only public halls in existence at that time were the Town Hall over the Municipal office in the Gol Bagh and the Montgomery Hall in the Lawrence Gardens. The latter was used by Europeans for dances and other entertainments, and there was a library for the European residents. The Town Hall was used only rarely on important public occasions. The courtyard of the *Tribune* office was close to the walled city and was in frequent requisition for meetings of the Indian Association, political and other meetings I had for my first assistant Kali Prasanna Chatterji, whose family had settled in the Punjab. Kali Prasanna was a member of the Arya Samaj and a public speaker whose services were in frequent demand. He spoke Punjabi not only with fluency but with remarkable eloquence while his flashes of wit and stock of Punjabi proverbs kept his audiences in hilarious good humour. He died some years ago at Benares.

SARDAR DYAL SINGH MAJITHIA

Sardar Dyal Singh Majithia was the proprietor of the *Tribune* newspaper. He was the only son of Sardar Lena Singh Majithia, Commander in chief of Maharaja Ranjit Singh's army. Sardar Lena Singh was a remarkable man. In a court in which hardly a single man was free from corruption he was a man of the highest integrity of character, deeply religious and very ingenious in mechanical devices. A clock made by his own hand was shown to people several years after his death. Lena Singh was the owner of the village of Majeeth in the Amritsar district and had a fortified baronial mansion. At Amritsar he had a large *haveli*, the *Zenana* being enclosed by a high wall. Lena Singh retired to Benares and died there. In the Golden Temple at Amritsar there are two flagstaves in

front of the Akal Bunga where the Khala Sikhs are initiated. The faller of the two poles was set up by Maharaja Ranjit Singh and the other by Sardar Lena Singh. Dyal Singh lost his father while he was a young boy. As a young man he went to Europe and stayed for some time in England and France. The visit to Europe left a permanent impression upon the young Sikh nobleman. He was an orthodox Khalsa Sikh by birth. In Europe he cut off his long hair and never wore it long again. His religious belief inclined strongly to the theistic creed of the Brahmo Samaj, and he was a consistent and loyal supporter of that movement. When he lost his first wife negotiations were carried on for his marriage with a young Bengali Brahmo lady who, however, declared her preference for another suitor. Sardar Dyal Singh was a great admirer of the Bengalis, whether Brahmo or Hindu, and his most trusted advisers at Lahore were Bengalis. He was the foremost representative of the Sikh aristocracy and might have easily become the recipient of many favours from the Punjab Government. But his visit to Europe and his studies had made him a real patriot with genuine notions of self respect. While the sons of other leading families in the Punjab eagerly sought official favour and humiliated themselves before European officials, Sardar Dyal Singh was never seen at Government House or any official Durbar. He had some European friends but he never visited any official as such. His independence was all the more remarkable when it is remembered that it is more than fifty years ago that he returned from Europe. The usual effect of a sojourn in the West is an overpowering fondness for everything European. Dyal Singh neither put on European clothes, nor lived in the English style, neither did he show any preference for the company of Europeans. I do not think the Punjab has produced another man like him since that Province passed to the British Government.

THE WARBETON CASE

Some time before I took charge of the *Tribune* a case for defamation had been

brought against that paper by Colonel Warburton District Superintendent of Police Amritsar Colonel Warburton's father was an Englishman and his mother an Afghan. The *Tribune* had published a number of serious allegations against the Amritsar police. Some leading lawyers of Lahore including Pratap Chandra Chatterji afterwards a Judge of the Punjab Chief Court offered to appear for the defence without any fees but Sardar Dyal Singh would not accept any favour from any one and all the lawyers were paid in full. After a protracted trial heavy fines were imposed upon the Sardar as proprietor of the paper and Sitala Kanta Chatterji the Editor. The expenses ran up to several thousand rupees. After my arrival at Lahore Colonel Warburton brought another case against the Sardar arising out of the first case and on the advice of the lawyers it was compounded by the payment of a solatium of Rs. 10,000 to Colonel Warburton. This was the only case ever brought against the *Tribune* which was started in 1881 and is still the leading Indian newspaper of the Punjab.

SARDAR DYAL SINGH AND THE TRIBUNE

When I first saw him Sardar Dyal Singh was about forty years of age fair and of medium height and inclined to corpulence. He was a splendid representative of the Sikh aristocracy with a full rounded face bright eyes and a close cropped beard. Aristocratic in appearance he was thoroughly democratic in his habits of thought and sympathies. The Brahmo Samaj at Lahore was liberally assisted by him and he was always accessible to all visitors. He was well informed and widely read was greatly interested in religious and philosophical subjects and was of a serious turn of mind. He had started the *Tribune* at the suggestion of friends without the slightest notion of any personal profit or public kudos. There was a small annual loss even when I went to Lahore but in another year or so the paper began paying its way and gradually became profitable. Sardar Dyal Singh was an ideal newspaper proprietor. He never interfered other than the editorial work or the management. He was so considerate that on one occasion, having received intelligence of a certain affair he came over to my house and communicated it to me. The discretion of the Editor was absolute and wholly unfettered. No matter who happened to be criticised

there was no appeal to the Sardar. Any one who complained to him was referred to the Editor whose influence and position were greatly improved by the correct attitude of the proprietor. He was not in much sympathy with the Arya Samaj movement and held aloof from it. The Dayanand Anglo Vedic College was once in sudden need of a senior professor of English and I offered my services temporarily. When I asked Sardar Dyal Singh for permission he gave it at once. Later, when I was relieved of the professorship the Sardar asked me why I did not take it up permanently. I explained that there was too much strain and such time as I could spare from the *Tribune* was given to literary work in Bengal. Of the Sardar's readiness to help any good cause I remember in instance when Upadhyaya Brahmandhava (Bhabani Charan Banerji) once wanted some help for a paper called *Sophia* and on my mentioning the subject to the Sardar he at once gave a cheque. Upadhyaya Brahmandhava was at that time a Christian and had left the Anglican Church to join the Roman Catholic persuasion.

THE ARYA SAMAJ MOVEMENT

By birth Swami Dayananda Saraswati was a Nagar Brahmin of Gujrat. The fame of his learning had spread over the whole of north India. He had visited Calcutta, Benares and other important centres and had held Sastri discussions in several places. At first he spoke no other language except Sanscrit and Gujrati but he learned Hindi after leaving Gujrat and his well known book the *Satyarth Prakash* was written in that language. Swami Dayananda wanted to revive and re-establish the Vedic religion as distinguished from the various phases of Puranic religion and the worship of idols. But his propaganda did not meet with much success in the strongholds of orthodox Hinduism. In Calcutta Swami Dayananda met Keshub Chandra Sen but the leader of the Brahmo Samaj of India as it was then called was unable to agree to an alliance with the reformer from Gujrat, and it was not in the nature of the Swami to play second fiddle to any man. At length Swami Dayananda met Lala Mulraj of the Punjab. Lala Mulraj who has now retired from the public service of the Punjab after working as a Divisional and Sessions Judge

was a distinguished graduate of the Calcutta University and the only Punjabi who succeeded in winning the Premchand Raychand Studentship. The Panjabis are a religiously-minded people but the conditions in that Province are somewhat peculiar. There are about two million Sikhs in the whole Province, but fresh converts are few and there is no regular proselytising propaganda. As a community the Sikhs are educationally backward and the Khalsa College at Amritsar was not established till the nineties of the last century. On the other hand, the hold of orthodox Hinduism is not very strong in the Punjab. There are not many ardent Vaishnavas and Sivaites as are to be found in Bengal, Bombay and Madras. The worship of Durga or Kali is not common. There was no seat of Sanskrit learning anywhere in the Punjab. Of the educated Panjabis very few had joined the Brahmo Samaj. At the same time, every one shared the feeling of pride in the knowledge that the Punjab was the ancient Aryavarta, the land of the Vedas. With the practical help and advice of Lala Mulraj, Swami Dayananda established the Arya Samaj at Lahore and in a few years the majority of the educated Panjabis joined the reformed Church and became Arya Samajists. Branches were opened in all towns of any importance in the Punjab and a vigorous propaganda was carried on to enlist fresh adherents to the Arya Samaj. Vedic mantras were recited and chanted, the sacred and solemn Homa was performed and congregational worship was introduced. Enthusiastic preachers of the Arya Samaj went about the country preaching the revival of the Aryan tradition and the Vedic religion.

THE TWO SECTIONS OF THE ARYA SAMAJ

The Arya Samaj was divided into two sections, one of the meat eaters and the other of the vegetarians. The two sections were somewhat irreverently designated the *mas* (meat) party and the *ghas* (grass) party. The division was something like the Vaishnava and Sakta sects among the Hindus. The bulk of the educated Panjabis belonged to the first party, while the other section was led by Lala Munshi Ram, a pleader of Jullunder, afterwards known as Swami Sraddhansanda. The meat eating section was also known as the D A V College party, because it had organised and established the

Dayananda Anglo-Vedic College at Lahore. I was present at some of the anniversaries of the party and was greatly impressed by the enthusiasm and fervour of the gathering. The anniversary used to be held in the grounds of the D A V College (now used for the school) and was attended by representatives from all parts of the Province. The ladies sat behind *chiks*, though the purdah has now been practically abolished in the Punjab. At these anniversary meetings appeals were made by various speakers for funds for D A V College and school, and the response was remarkably spontaneous and generous. Large sums of money were collected on the spot and handsome donations were promised, while the ladies took off their ornaments and added them to the heap of coin and currency notes.

The Wachhowli section of the Arya Samaj held its anniversary inside the walled city and the proceedings were led by Lala Munshi Ram. There was no educational institution controlled by that party at that time. The Gurukul, Kangri, near Hardwar, was founded by Lala Munshi Rama some years later and became a famous academy in course of time. The *Suddhi* movement was an offshoot of this section of the Arya Samaj, and the moving spirit was Dr Jai Chaud, whose enthusiasm in reclaiming Hindus who had embraced some other religion was unbounded. Both sections had their organs in the Press and various subjects, not always of any immediate interest, were debated, sometimes with considerable heat. At one time there was a prolonged discussion about the doctrine of *Niyoga* as mentioned in the Institutes of Manu. It was not only discussed in the organs of the Arya Samaj but was the subject of constant and excited oral discussion in which even the students took part. Now, the doctrine of *Niyoga* was introduced at a time when the population was sparse and progeny and sons were considered essential. Society in India has now reached a stage at which no one can dream of the practical application of *Niyoga* any more than the imposition of the penalties laid down by Manu for various offences. The social organism has outgrown many of the ancient conditions and the revival of the Vedic religion does not impose any obligation for the reversion to customs which can not be defended on ethical and moral grounds. The entire controversy was hypothetical and purely academic, but it was carried on with

great zeal for several months. The love of argument was a marked feature in the Arya Samaj among the old and the young, while the study of Sanscrit was still neglected. The boarders of the D A-V College were taught the *Sandhya* and *Gayatri* mantras, and later on Sanscrit was taught at the Gurukul. The D A-V College and School have now grown into splendid institutions, with imposing buildings and extensive boarding houses, while the Gurukul has attained world-wide celebrity. The Arya Samaj in the Punjab has good reason to be proud of its achievement.

LALA HANS RAJ

The organised efforts and the spirit of sacrifice to which the Dayananda Anglo-Vedic College owed its existence were typified in Lala Hans Raj, the Honorary Principal of the College from its foundation, and who remained at the head of this institution for over a quarter of a century. It was a deliberate but most unostentatious self-sacrifice. Lala Hans Raj never accepted any remuneration for his services. He maintained himself on a small allowance given to him by his elder brother—Lala Mulk Raj Bhalla. As I was associated with the College for a few months I had many opportunities of judging for myself how quietly and efficiently the Honorary Principal administered the affairs of the institution. Lala Hans Raj is a deeply religious man and took

part in the weekly service of the Arya Samaj. There have been zealous and earnest men in both sections of the Arya Samaj in the Punjab, and not the least remarkable among them is the first Principal of the D A-V College. When Swami Vivekananda was my guest at Lahore, Lala Hans Raj used to come and see him, and they had long heart to heart conversations. Lala Hans Raj invited the Swami to dinner and they spent several hours together. Only a few months ago Lala Hans Raj was telling me at Lahore that Swami Vivekananda used to speak to him without any reserve and there was hardly any question that they did not discuss. Lala Hans Raj retired from the College several years ago and lives very modestly, associating with religious men. I have often wondered what influence the shining example of his devotion and sacrifice has exercised upon the young men who have been passing through the Punjab Colleges during the last forty years. Many of the young students of those days have succeeded in life. Some are lawyers, others judges, medical men, and so on. How many of them appreciate the greatness of Lala Hans Raj, or realise that there are few examples like him in the Punjab? He is now called Mahatma Hans Raj, but the lesson of his noble life should be a living example in the Punjab. Every year that I revisit the Punjab I spend some time with Mahatma Hans Raj and we talk of the old times and the presages of the future.

"THE HISTORY OF THE PRARTHANA SAMAJ"

By V N NAIK

"THE History of the Prarthana Samaj" is a book in Marathi written by Mr D G Vaidya, the editor *Subodh Patrika* which is the organ of the Bombay Prarthana Samaj. The book was written in connection with the Diamond Jubilee celebration of that religious body on the completion of its sixtieth year in April last. The book is a large comprehensive volume containing in all about 700 pages. It is divided into two parts. The first part, of about 320 pages, sketches for us in full and accurate detail the history of the institution from its early beginning in 1867 as also of the various social, philanthropic and

educational activities conducted by that body. The second part (pp 372) is devoted to the study of the lives of some of its most prominent founders. This part contains short but vivid character sketches of eighteen members of the Prarthana Samaj, of whom the names of men like N M Parmanand, Shankar Pandurang Pandit, Lalshankar Umvi, Shankar Damodar Das Sukhad-wala, Ranade, Bhandarkar and Chandavarkar are or ought to be known all over the country in virtue of their social, religious, political or philanthropic work, as also on account of the eminence of some of them in point of scholarship and

learning. Others like Modal, Bhagwat, Kelkar, Nowrange, Madgaonkar and Dr. Atmaram Pandurang were local celebrities whose life was characterised by purity and piety and who were known to all here for their zeal and devotion to the new faith they had embraced. Some of these were rapidly growing to be forgotten worthies and Mr. Vaidya deserves the sincerest thanks of the members of the Prarthana Samaj as well as of all students of the social and religious history of Western India during the last sixty years, for rescuing the names of these worthies from oblivion and restoring to them their proper place in the pantheon of the new church. Much material that would have remained buried in newspaper files and stray leaflets and brochures has been utilised in this volume to throw a flood of light on the social movement of this Presidency from the times that date fartherback than the establishment of the Prarthana Samaj in Bombay. The second part illustrates in vivid touches what is told us in simple narrative in the first.

The Prarthana Samaj as we discover from this history written by one of its most earnest, enthusiastic, sincere and devoted workers and members during the last twenty five years originated in the combined effort of the first batch of educated men in the city to save themselves and their society from the onrushing tide of religious indifference, atheism and irresponsible living. The old could have no longer any hold on the mind of these men. The new mould in which their character could be cast had not yet been formed. They had realised how Hindu Society of their time—in the forties and fifties of the last century—was in the grip of superstition and convention that were eating into its vitals. On the one hand there was the Christian Missionary eager to make converts out of these centres of indifference. On the other hand the orthodox party would not listen to reason and mend its own house. What were these young educated men to do under the circumstances? They had felt the degrading influence of superstition around them, they had realised how baneful the institution of caste had proved with its numerous ramifications and its fissionary influences. They had studied the ancient writings for themselves and they were convinced that many of the customs and traditions that prevailed in their day—such as idol worship, and caste-distinctions and priestcraft with its attendant and degrading practices—had no sanction to those writings. Conversion to Christianity did not appeal to them. Hinduism in its existing form was equally intolerable. A purified form of religion with its natural sequence and the reform of our social practices became the necessity of their lives. Thus came into existence a secret society—known as the *Parama Hansa Sabha*—the members of which disowned idol worship, abjured the narrowing sanctions of caste, swore to regard one another with the feeling of real brotherhood and resolved when the society had gathered sufficient strength of numbers and had clarified its principles by common discussion, prayer and self-discipline to make its voice public and to work for the emancipation of their country from the thralldom of old world ideas. As we gather from the pages of Mr. Vaidya's

book where for the first time, the account of that body is given in a connected and clear form, the object of that Sabha was not merely religious nor had it confined its membership to Hindus alone. During its life of a decade and more it had enrolled a membership of one thousand followers and had its branches in several parts of the Presidency. Its aim was social and national. By the abolition of the spurious distinctions of caste, creed and custom it aimed to unite all in common worship of One God and under Him to behave towards one another as brothers. Such was briefly the *Parama Hansa Sabha*, the premature disclosure of whose activities, by an enemy in the camp and its grossest misrepresentation in the public press brought about its disruption and end. That the society was started as a secret body was the cause of its dissolution. Many of its members relapsed into orthodox ways, became converts to Christianity but there were a few who constituted the salt of the Society. It was out of these that the movement now known as the Prarthana Samaj of Western India came into existence.

That body has no doubt drawn its inspiration from the sister church in Bengal. But the pages of its history before us make it clear how the impulse to possess a renovating faith came from within and was racy of the soil itself. The first hundred pages of the volume before us make a very instructive reading in that respect. They serve to clear up many doubts and enable us to know and weigh aright the many factors that precipitated the movement so as to make it a pioneer movement on this side of India of the numerous reforming, educational and social activities such as the Night Schools, the day schools, the Pandharpur and other orphanages, the prayers and public meetings, the Sangat Sabhas—meetings for the discussion and exchange of religious views, the Mahila Samaj and the free library and reading room, movement, numerous other centres of social uplift, moral improvement and national unification which are now so common in our country. These were conspicuous by their absence at the time the Samaj came into existence. Under its fostering care many of them saw then first light and have grown to vigorous proportions. And almost all of them have now been adopted or emulated by other social workers and Leagues throughout the Presidency. That portion of the book which outlines these activities is also an exceedingly interesting section. One can imagine the labour, the study and patient thought it must have cost the writer to bring the scattered material into one focus and evolve out of it a systematic history of the entire movement such as we have before us in this book. One would have liked the author to devote a few pages, at the conclusion of the book to the consideration of the place of the Prarthana Samaj in the national life of the country as a whole. The author has done enough in the discussion of its tenets and principles to refute the charge of its foreign origin and inspiration. But it has been the negative aspect of the work. The positive side of it, namely its proper place in and contribution to the reconstruction of India, has not been so well and so methodically developed. We wish the author had done so. The biographical section of the volume throws considerable light on this aspect of the

I have been Great Britain it certainly was the British Reuters news agency that convinced us Russia was an immoral nation not to be dealt with. A few months later the British had resumed relations with Russia. We continued to stand by principle.

Mr Close urges the United States to keep calm and follow an independent intelligent policy with the Pacific nations. He centers his attention for a while on China Japan and Russia. It is impossible to head off the revolt. America has the power to guide it to the benefit of all the Pacific nations. As Great Britain's star is fading let the United States take a statesmanlike lead.

Asia is making the Pacific our front door. Omens multiply that the age of the Pacific is upon us. Economically this is proved by the rise of Shanghai to the third port in tonnage in the world. Politically amazing evidences confront us. China has taken the lead in the Revolt of Asia away from Turkey which means that the United States of America is left as the vanguard nation of the white race and western civilization. The two potentially greatest powers in the world the United States and China confront one another as leaders and spokesmen of their respective worlds.

Mr Close urges America to sympathize with the nationalistic aspirations of awakened Asia. "American idealism continues to be a factor in the editorial sympathy of the overwhelming majority of American newspapers with Asiatic nationalism aims. It expresses itself in a Porter resolution calling on the President to negotiate new treaties with China on a basis of reciprocity and equality and declaring severance from the concert of powers policy. It exists in the purest form in the utterances of Senator Borah." Mr Close reminds his countrymen in a brilliant chapter that since the days of Columbus Asia always dominated American destinies and that Americans should recognize the fact that the Far East is their Near East. And located geographically as she is looking both ways to Europe as well as to Asia—she has the power to direct the present high tension in Asia to peaceful channels. Her first gesture in that direction should be the granting of Philippine independence and then cooperate with Japan and China to steady the progressive march of the rest of Asia to her own interest.

With expansionism abandoned intensive industrialism is taken up as the method of caring for Japan's large population and improving the standard of living. But this requires three things in addition to the working population a source of raw materials a market for finished products and capital. Asiatic Russia and China can supply raw materials and China, Malaya and India the chief markets. America, alone is able to supply the capital necessary for she is the world's banker. In this corner of the Pacific, America greatly needs a friendly Japan that stands upon its own feet. This is America's God-given opportunity not to make one of the Asiatic nations its economic vassal or even special friend but to demonstrate the practical expression which America's enlightened Imperialism is prepared to take toward Asia.

With rare honesty and courage to save the world from a great war he therefore calls upon America to renounce the Philippines Japan to renounce expansion Great Britain to renounce India Russia to renounce her destructive designs China to renounce anti foreignism. Thus through mutual sacrifices can world peace be made secure. The New Era demands that:

1 Western control of Asia for profit political or commercial is discredited and in collapse.

2 The general and conscious demand of Asian peoples for control of their own destiny nullifies the white man's responsibility for their welfare.

3 Legitimate Western interests and properties and lives of individuals stand a fair chance of protection under the native sovereignties in prospect.

4 The Asian nations have lost their fear of the white man and are carrying forward their program resolutely.

5 The Western Powers with the sole exception of America frankly lack the ability to resist Asia's revolt.

6 America is the only power that may make resistance of the white race to the ending of its world domination possible.

7 Attempts to check the haste of the Asian movements by military demonstrations work the opposite results.

8 Asia's movement thus far is entirely directed against the Westerner on Asian shores. There is not the bud thus far of an offensive against the white man in his own countries.

Mr Close in his admirable book discusses also the cultural revolt of Asia. Mr Gandhi who was interviewed by Mr Close assures him that Westernism is a more dreaded tyrant than Westerners. If Mr Gandhi turns to the past, writes Mr Close, it is with a new spirit which is a distinctly western contribution to Hinduism. The conviction that I shall always live, and that I can better my condition sums his personal philosophy. The next life he elaborates cannot progress beyond the goal we set for this. I preach salvation through service worship through action. Interpreted thus, Hindu civilization is the greatest influence in the world for the improvement of the life cycle. I cannot have it destroyed.

Behind this philosophy of life new social experiments are going on. Young China is following the philosophy of the pragmatic school which holds that only that which is demonstrated to be beneficial can be accepted as a guide. We are more modern than you Westerners said a Chinese student in Shanghai to Mr Close. We are free from all superstition while you still have your religious mindedness your worship of wealth and your race prejudices. The Filipinos are afraid of the ruthless efficient gut tearing civilization of America which is shadowing their lives and greatly contributing to the strength of the independence campaign among the educated classes. In Siam "pacifist Buddhism drafts all young men into monasteries for at least three months experience as priests during which they are taught non resistance and told the taking of life is an unforgivable sin. Then the novices are compelled to turn from the monastery directly to the army for eighteen months military training."

Whether Asia will ever produce a leader who will add to the magnetism of Mahatma Gandhi.

the pragmatism of the Kuomintang to show the way of liberation from the political and economic dominance of the white governments or whether the freedom of Asiatic nations will be achieved with reasonableness and sanity triumphant depends entirely on what attitude the peoples of Asia and America take toward the political upheaval in the Orient

Mr Close in his *Revol of Asia* shows a way out. The book is a welcome contribution to the study of international relationships. The people of the Orient will be glad to know that the press in America has taken a sympathetic view of the book and did not hesitate to declare that the book should be in the hands of every Senator and Congressman of the United States

GLEANINGS

Filming The Epic of Everest

Six Blankets on the Snow laid out in the form of a cross—it as the signal of death. Printed on the cruel white crest of the Goddess Mother of the World higher than man had ever climbed before and discerned by telescope a mile or two down the mountain side that cross of blankets told a story of mystery and magnificent failure the requiem of two indomitable climbers who within hail of the very climax of their ambition and their incredible labors had vanished from human ken as completely as if caught up on high like Enoch or Elijah. Such was literally the high spot—well named in this case—of the third Mount Everest Expedition the cinema record of

suggested Maybe Captain Noel mused she had killed them in revenge after they had attained their victory. Who knows? She alone holds the secret. For all my efforts there was much that my camera had not been able to record.

They called this the barland of Ice

which is now being exhibited to motion picture audiences. The man who made the film Capt J B L Noel confessed to realize when he saw the baffled relief party spread that telltale symbol on the snow how cruelly this mountain fights. True to her sister's put on in Tibetan monasteries and native villages she had allowed the men to come on and at the last moment had killed them. But did the victims actually conquer her before they perished? That mysterious possibility is

Dear to Climbers and Cross Word Puzzlers

When Everest falls on the Goddess Mother of the World

Small wonder that the filming of The Epic of Everest lives in the camera man's memory as the most difficult and absorbing task he has ever undertaken or is ever likely to undertake

matter. But the light comes in scattered rays. It is not so systematically handled as one should have liked it to be in a separate chapter at the conclusion of the book. An outsider often asks himself the question how a movement so rational so true to the best ideals of our ancient culture so open to new light from every quarter so much imbued with the true spirit of progress so entirely free from bigotry and fanaticism so liberal and with so much in it to appeal to the mind and heart, to the conscience and character of all educated men in the Presidency should not thrive in the soil of Maharashtra to the extent to which the Bramho Samaj has thriven in Bengal or the Arya Samaj in the Punjab. Is it the rocky and barren quality of the soil itself? Is it the prevailing indifference in the Indian educated community to deeper matters? Is it the obssessing influence of an exclusive and undue devotion to politics that has thrust aside questions of religious and social reform? If we examine narrowly the lives of the majority of educated Indians around us we do not find them practising any of those things that orthodoxy holds dear. They do not worship idols. They do not obey strictly the sanctions of caste they are social reformers for all practical purposes and yet the Prarthana Samaj and such other movements that make these matters subject of a solemn pledge do not grow in membership. Wherefore this? What does it point to? Whither will it lead us?—Not the movement or the church but the people and the country. Such questions cannot help suggesting themselves to any thoughtful reader of this volume. One wishes the author himself had attempted an answer to the question. But he has not done so. That does not mean that it is not clear to his mind. But he has not raised the issue definitely and tried to grapple with it.

The preface to the book written by the President of the Samaj Mr. Vasudeo Gopal Bhandarkar is an illuminating piece in itself and places the whole movement in its proper perspective.

On the whole the work is indeed well done. It is written in a clear and lucid style is entirely free from any wrong bias one way or the other. The author has endeavoured to be fair and just to all and yet the book is a plain spoken document. He has eminently succeeded in tracing the history of the institution from its early beginning to the present day. The record of the work done is highly creditable to the institution and its founders. And the historian is worthy of the task. It has been a labour of love to him completed within three months. It is one more indication if any were needed of his zeal and devotion to the church of which he is an earnest minded member. Mr. Vaidya has been the editor of the Subodha Patrika on its Marathi side now for the last 20 years. During that time he has brought out several volumes to elucidate and popularise the doctrine and tenets of the church and to explain them to outsiders. Such are his compilations of the sermons of Justice Ranade and Dr. Bhandarkar. The volume before us in a sense puts a finishing touch on the task begun in his editing of those two early volumes. With these three books before him no outsider need be at a loss to know what the Prarthana Samaj stands for and what work it has accomplished under such leading lights as Ranade, Mokal Bhandarkar and Chandavarkar. We commend the volume to the readers of the Modern Review. An English version of the same is such a desideratum. It deserves a place on the shelf of every serious minded student of social and religious history during the last sixty years.

THE REVOLT OF ASIA

THAT is the striking title of a timely and excellent book written by Upton Close (Joseph Washington Hall) in which the author gives a penetrating interpretation of Asia's political flux that may mean the end of the White Man's World Dominance.

Mr. Close has been a student of Asiatic Politics for a number of years. For a time he acted as Chief of Foreign Affairs on the staff of General Wu Pei fu. He acted as a counsellor to Chinese students when they engineered the remarkable "Student Revolution" of 1911. He saw the dynamic forces at work in China and in his recent tour through all the Asiatic countries he found the same forces at work in Japan, Korea, the Philippines, French Indo-China, Siam, Java, the Malay States and a Afghaniestan, Persia, Turkey and Egypt. And the result is this voluminous book written in a nervous newspaper style. But I think remarks *Lancet* Gaucett one of the editors of the *Tribune* New York weekly. *The Nation* who had been to the Orient himself, he is essentially correct.

He accepts the liberation of Asia from Western domination as a foregone conclusion and is very searching and sincere in seeking amicable solutions. He warns the western nations and America and shows the futility of maintaining their supremacy over the Orient by force of arms. Not only are the nations of the East wide awake to their strength but Mr. Close finds them co-operating with each other to bring about the eventual political economic and cultural liberty of Asia. We note the Chinese Minister to America takes his vacation in Turkey. Nationalist China makes treaty with Afghanistan. Japan establishes an embassy in Turkey and opens permanent industrial exhibition at Constantinople. Gandhi plans a lecture tour in China. Tagore is eager to break the cultural isolation of India and travels extensively in the Orient. The Indian National Congress passes resolutions in sympathy with the Nationalist party of China in its triumphant march to Peking and again Japan lavishly entertains Japanese princes, and shows in all her public schools the Indian-

made film of the Buddha story. The Light of Asia.

Russia ostracised by Europe and America, now turns her eyes to Asia. Mr. Close finds that the pro-Asiatic policy of Russia is not due so much to vindictiveness. The reasons go deeper. First of all Russia's alignment with the Asiatic peoples has been made easy by her cultural background. A feeling strong in the Slav world was expressed by the Croatian present leader M. Raditch before the Zagret at Belgrade Referring to the rise of China he said that while Great Britain and the United States formed a maritime system supported by Europe Russia with China formed a continental unit which would be the center of the world and might be joined by India. We belong to the West by history and culture he concluded but to the East by sentiment. Secondly a keen sense of Machiavellian practicality forced Russia to drift toward Asia. Russia discovered maintains the author that England's last great Imperial Scheme was directed against her. She was to be encircled by Britain. Greece was encouraged to attack Turkey throughout the Near East British influences again became dominant and Persia was made a protectorate she sponsored revolutions from the Black Sea under Wrangel Denikin and Udenitch from the Pacific under Kolchack Semenov and Ungren from Turkistan under various petty adventurers and also from the North with full support from France Italy and America. To counteract this scheme Russia boldly introduced a new game threw her lot with the Asiatics and joined the Fraternity of the scabbard. Cast out of Europe for political and economic reasons and out of America for puritanical reasons as well (Russians find a mental kinship with Japanese suffering from scrubs in their racial pride administered by the United States and the British Dominions or Indians openly regarded by their rulers as an inferior race or Filipinos told that they are not out of their age of tutelage. Ardently fleeing Woodrow Wilson's banner of self determination on Russia inspired the young intelligentsia in Turkey Persia Afghanistan China and India to make their peoples into nations. She renounced her special rights in China and Persia and thereby the Soviet statesmen showed themselves an ace in advance of their European Rivals. On May 31 the first equal and reciprocal treaty between China and a white power Russia was signed. Thus the Soviet has proceeded readily with its program to inspire and assist half the members of the human race to the mastery of their own destiny. Approve it or not, continues Mr. Close "it is the most portentous piece of enlightened international philanthropy since France helped to make America a Nation."

In Russia, therefore Great Britain finds a natural enemy to the fruition of her ambitious imperialism of 1917-19. Russia's challenge to Britain stiffened the nationalistic demands in Egypt Afghanistan concluded a treaty of mutual neutrality and amity with Russia (1920). "It is maddening to think, viewed Sir Francis Young husband of Lhasa Expedition fame, that after all the sacrifices we have made our whole position in Asia should now be in jeopardy." And India "blazes into Nationalism in spite of the so-called Reforms of 1919. Hindus and Moslems are uniting with a hundred other sects and races as

Indians under Swaraj (Home Rule). A Moslem fanatic recently murdered a Hindu saint and patriot in Delhi. The British said 'See! But hundreds of contrite Moslems marched in his funeral procession. That was different.'

"The Crucial Test of Great Britain's ability to meet the new Asia must come in India just as America's must come in the Philippines." The rise of western educated intelligentsia in Asia the ruinous effects of economic boycott on commercial nations the European disorders of the World War and Russia's determined plan to encourage Asiatic self assertion can the British statesmanship save the empire from these disintegrating forces? God always provides a way for the British Empire, said a whimsical member of the Secretariat in Delhi to Mr. Close. When we have to leave here (India) we still have Africa left. But Africa will eventually follow Asia into revolt. What then? There is only one way out if Great Britain can make its vassals into nations grappling them to it with steel hoops of friendship in place of the iron bonds of militarism if it can quicken its executives and inspire its laborers it will have assured unto itself the same glorious place in the new era of enlightened imperialism that it enjoyed in the now closing age of political domination.

This means giving up India, and control of all lands from Egypt and Gibraltar to the Strait Settlements and Singapore, and the supremacy of British fleet in the Mediterranean and Asian waters. It is a daring idea though not an impossible one. Mr. Close makes it very clear that if Britain is to survive she must transform her vast empire from an empire of the sword to an empire of commerce. For according to Mr. Close, Great Britain is today either unable or unwilling to take all the risks and responsibilities of stemming the tide of Asiatic forward movements and keeping the banner of White Supremacy flying on Asiatic soil. Should America help England retain her old prestige in the Orient? America could and should take the lead said a British resident in Shanghai to an American journalist. The speaker was in old China hand. He still believed in a strong policy. Is America to intervene?

Uncle Sam is not particularly altruistic from the outsiders point of view but he is very sentimental. He was persuaded that he ought to save France. He once was almost persuaded that he ought to fight the Turk that he ought to take charge of Armenia (incidentally protecting Great Britain's grabs in the Caucasus). He was convinced that he ought to stand for civilisation against perverted Russia. Now he ought to champion the white man's prestige in an awakening Asia. He ought to protect Shanghai. Great Britain should not be expected to do it any longer. It is costing her too much.

So there is the danger America may join Britain to thwart the progressive march of China at this moment if the latter succeeds in convincing America that the question at issue is a matter of principle. For Uncle Sam is a stickler for principle, as the above quotation from the author shows. John Bull also is a man of principle. But while the British talk principle and opportunity and are not afraid to change their minds, America remains true to her principle. As an example, Mr. Close points out. It must

Says Captain Noel I had four cameras to insure me against the ever present possibility of having my work brought to an end if one or more of them should fail and break. With them went tripods, supplies of film and plates and developing tanks, a developing tent and other paraphernalia. All this equipment was packed in specially made steel cases.

During the first half of the journey from Darjeeling the appachies of Everest mules carried the photographic baggage. After that we employed the yaks.

Where the Mighty Mountain is feared
and worshipped

In the pictures I made it more than ever my task to convey as well as I could the fascination of those secluded lofty divinely beautiful mountains of Tibet and the implacable majesty of the supreme mountain herself—a majesty that causes the priests of the Rongbuk to worship her as a sacred living creature and to name her beautifully Goddess of the World. Not to add those impressions to the chronicle of events would be to leave the Everest story half untold. Above all it was my desire to convey a "something" that make the spectator feel the immensity of this struggle of man against nature—make him feel that climax which we ourselves reached among Everest's virgin snow fields fighting, to the last ounce of our strength against her power, snatching victories, creating records before hurled back an unforgettable impression of power, beauty, grandeur and the insignificance of man. If I could convey this feeling to others and so enable

them to share what we ourselves felt then I should succeed in my task.

Man Was Never an Ape

Your ancestors were neither apes nor human beings says Prof. Henry Fairfield Osborn, president of the American Museum of Natural History in New York City and one of the world's foremost paleontologists in an address before the American Philosophical Society in Philadelphia a few weeks ago. Professor Osborn expressed the belief that the forerunners of modern men were dawn men, who developed independently of the apes from some prehistoric animal not yet discovered.

According to Doctor Gregory the close similarity between the bodies and minds of modern apes and men is strong evidence that the direct ancestor of both was an ape. Thus he recalls was the original idea of Darwin to which he urges

Above So-called Java ape-man of 500,000 years ago. Right prehistoric Pithecanthropus man who lived in England.

that scientific theory must return. In recent years the most commonly accepted theory has been that men and apes both were descended from a common apelike ancestor.

In support of his dawn men Professor Osborn puts man's origin not thousands of years ago, but sixteen million! Both men and apes first appeared then he says, therefore man could not have descended from ape ancestry. Traces of man's mysterious ancestor he suggests might reward a diligent search in Central Asia, where he believes the dawn men first sprang into being.

Thus dawn man, the founder of the Mongolian Negro and Caucasian races is described by Professor Osborn as ground living, alert, capable of tool making and living in the fairly open country of the high plateaus and plains of Asia. The celebrated Neanderthal man, a primitive race of Europe Professor Osborn believes to be a later offshoot that eventually died out, leaving no descendants. "Pithecanthropus erectus of Java, usually considered the earliest of our ancestors may be one of the last of these Neanderthals," he adds, and therefore no direct kin of ours. New geological discoveries have shown much earlier the

Pitdown men of England perhaps the last of the dawn men

Prof Osborn's belief in dawn men and their more mysterious ancestry is supported by a recent

Above Neanderthal man primitive European of 25,000 to 50,000 years ago believed by Professor Osborn to have been a latter offshoot of dawn man. Right Cro-Magnon man of 50,000 years ago

discovery that apparently shows men existed at least four million years ago—long before previous estimates of man's antiquity. In a Nebraska hill, Professor Osborn discovered more than 30 fossilized bone implements of that estimated age fashioned by the hands of some primitive man from the bones of extinct animals.

The Classic World Come to Life

The moving picture plays shut us up in the dark. We stumble into our places at any time in the course of the show and stumble out when we have had enough. What is lost by these assaults on the attention? One hears it said that the drama will find its salvation in returning to its ancient stronghold, namely, in the open. A return to the Greeks and the Romans would mean a new technique as modern theatrical programs would hardly lend themselves to the vast proscenium of ancient theaters flooded with sunlight. Elsewhere in the classic world where Greek or Roman theaters remain even though in partial ruins companies have revived the ancient tragedies and comedies. Syracuse in Sicily is favored with

frequent revivals Pompeii Ostia and Orange in southern France, are other centers of classical revival.

On May 10 a performance was given of Eschylus' 'Prometheus Bound' in the theater at Delphi in Greece where the sonorous strains of the old tragedies had not been heard for two thousand years. This festival was largely due to the efforts of an American woman, the wife of a Greek poet Angelos Sikelianos.

By the Shores of the Ionian Sea

Italy also turns to Greek Drama

which minors predominate. The Prometheus music had a free harmonic spirit in keeping with the majestic beauty of the surroundings.

Archeologists agree that the production in all its details was archeologically in keeping. Altho the present performance was probably a financial loss hopes are generally expressed that it will be possible to repeat the Delphic festival annually.

The Institute of the Antique Drama in Italy, under the direction of Ettore Romagnoli, established before the late war, has had a long and honorable record. Their performances this year in the historic Sicilian town of Syracuse are more fully reported by Silvio D'Amico in *L'Illustrazione Italiana* (Milan) where we read

Twenty-five Centuries after Aeschylus

If it be true, as it most certainly is, that nine times out of ten the ancient tragedies and comedies even if staged with the most loving care assume an inevitably academic rhetorical and scholastic character, the Institute of Syracuse knows that it has at its disposal the most extraordinary means to eliminate from its spectacles the air of cold erudition and to bring us back to the spirit of Ancient Hellas which it is said has survived here to a greater extent than anywhere else in the world."

Here one arrives as on a pilgrimage. Here one can circle for twenty-four, forty-eight, or more hours among the most celebrated ruins of classical times. Here one can enjoy again the same sky, the same sea, and the same countryside as of yore. Here one can be found again among the customs of the people almost the identical rites and beliefs of thousands of years ago. Here finally one can find the same theater substantially intact, in which Aeschylus staged his plays. The location could not be more ideal.

On the first evening in Syracuse was staged Euripides' 'Medea' or, the drama of the woman who slays her own children to avenge herself upon her unfaithful husband—all subjects which would prove incompatible to the reason or sentiment of an audience which for good or evil is Christian—an audience who knows that without the relation between the mother and her children with the eyes of one who for two thousand years has seen the Mother and the Child on the altar (and we do not mention the chefs d'œuvres of that

frantic humor of Aristophanes compared to which the most spirited talk of the humorous writers of our Renaissance becomes as the speech of boarding school girls. Willy nilly mankind of to-day admits its difference. Only a minor adjustment thanks to a cultural effort, can remake for itself—in some manner and for a short time—a Greek soul rediscovering the notes of its secret, essential identity with pre-Christian humanity.

Hell Raising Missionaries

Missionaries have been raising hell for more than a genera on says one of them quite frankly, and they are so-day at the bottom of a good deal of the disturbances in China, the Philippines, India,

The White Man's Day in China done

and South Africa—the agitation against the imperial domination of race and religion. But it was to be expected that they would rebel against these as they are for points of the Rev. James M. Ward in Unity (Chicago). Jesus was a revolutionary and twenty years ago Gilbert K. Chesterton warned us that there was enough dynamite in the social teachings of Jesus to blow a modern society to rags. The missionaries took Jesus to China says Dr. Lauder a Methodist missionary in the U. S. a journal of the religion of democracy liberal in its policy and views under the caption 'What Are the Missionaries Up To?'

"and He (Christ) has destroyed the myth of white superiority. That is one trouble in China. In spite of the bombast of some recent dispatches from newspaper correspondents in Shanghai the day of the white man in China is done.

According to him

Many of the Universities in China and India have had, not old grandmothers with lace bonnets but red blooded liberals teaching sociology, philosophy and religion. These teachers have filled Asia with new ideas.

If Western scientific civilization had been shaken to its foundations by the new discoveries it is no wonder that people whose lives were governed by conceptions and customs of the middle ages should be absolutely turned upside down by these modern teachings.

But of course in the end that will prove a boomerang for you cannot teach intelligent students to criticize one religion without teaching them to criticize all religions. That is especially true to-day when we know so much about anthropology, the development of society and the history of religion. All religion has developed evolved out of the childhood of the race. In their beginnings all religions have much in common. The missionaries did not intend it, but when they raised hell with Buddhism they also raised hell with Christianity. It was their avowed purpose to break up Buddhism and Mohammedanism. They tried to buttress their own orthodoxy while breaking up the other man's orthodoxy. It cannot be done.

The missionary has been marvelously successful in spreading doubt. He has raised doubts about marriage customs, polygamy and polyandry in China and Tibet. And of course monogamy in America comes in for its share of criticism and questioning. He has raised doubts concerning the righteousness of the fourteen hour day and the five-cent wage. He has questioned the divine right of kings and of parliaments and presidents and of capitalists.

Under the leadership of a missionary in 1922 Dr. Yard tells us the National Christian Council of China set up a threefold standard for industry: one day of rest in seven, no child labor, adequate safeguard in factories both as regards health and safety devices. That started the labor movement. Capitalism was challenged.

Again in October 1926 the National Christian Council a body made up of both missionaries and Chinese passed a long resolution dealing with international relations. One paragraph of which read: "That the present treaties between China and foreign Powers should be revised on a basis of freedom and equality. That the missionaries dared to criticize the policies of their own government is exceedingly dangerous."

Even worse than that as far back as 1924, before there was much of any agitation on the matter of unequal treaties, some missionaries in North China signed a resolution a part of which follows:

We therefore express our earnest desire that no form of military pressure, especially no foreign military force be exerted to protect us or our property and that in the event of our capture by lawless persons or our death at their hands no money be paid for our release, no punitive expeditions be sent out and no indemnity be exacted.

The missionary cannot of course, claim the credit for all the new and dangerous thoughts that have been brought into the heathen world. Businessmen, industrialists, philosophers, teachers, have all played their part. In China, John Dewey and Bertrand Russell and the writings of Ibsen, Tolstoy, Darwin and a hundred others. Novels, science, history, philosophy, religion.

The East is awake! Superstition is dying. Ignorance is passing away. Science is destroying poverty. The White Peril! is less dreadful. Don't you wish you were a missionary?

—The Literary Digest

TESTIMONIES OF COMPETENT ENGLISHMEN AS TO THE FITNESS OF INDIA FOR SELF-RULE

By THE REV DR J T SUNDERLAND

[It is rather humiliating to have to print certificates like those contained in the following article. But as there is at present much anti-Indian propaganda by Englishmen and others, the testimonies of persons who were not engaged in any propaganda at the time when they expressed these views may be considered valuable by unbiased people. Editor M H.]

IT is the claim of the British Government that the people of India are not capable of ruling themselves flat is do not possess the intellectual and moral qualities

necessary for carrying on the government of their own country, and therefore, require to be ruled by Great Britain.

In answer to this claim, the following testimonials are offered from eminent Englishmen possessing large knowledge of India, most of them officials long connected with the Indian government. More than four times as many other testimonies of like import, and little if any less weighty gathered within the last ten years, before me

authors of the Vedas of the Mahabharata and the Ramayana of the architects of the Taj Mahal and of such soldiers and statesmen as Baber Hyder Ali and Rumeet Singh.

And yet, nine tenths of what has been written by the British about India is so expressed that we are made to believe the shameful falsehood that stable and civilized government in Hindustan began only with the rule of the British.*

ARE INDIANS RACIALLY INFERIOR?

The Metropolitan (Church of England) Bishop of Calcutta in a sermon preached early in 1921 is reported (in the *Indian Messenger* of April 17 that year) as saying

There are persons who conceive that to the white belongs in virtue of inherent superiority the inalienable right to rule over races of darker color than themselves. But facts are against them. Indians have achieved the highest distinction in the varied spheres of human activity and by their successes have refuted the charge of racial inferiority. Certain of those qualities which we (British) are apt to think rank highly may be less in evidence among them than among ourselves but that is merely to say that they are different from our selves but difference may exist alongside of perfect equality.

WHO LD INDIANS BE CLASSED AMONG INFERIOR OR AMONG SUPERIOR PEOPLES?

Mr J. A. Spender long Editor of the *Westminster Gazette* says in his recent book *The Changing East* p 23 (1927)

There is no Eastern country which has so many talented men in so many walks of life as India. Men like Tagore whose writings are read all through Europe and America. Sir J. C. Bose whose researches in plant physiology are famous the world over and whose zeal and originality as a teacher make an indescribable impression on those who see him at work with his students. Major B. D. Basu the historian of India (Bhanu Gopal Mukerji) the author of *My Brothers India*—to name only a few out of scores—would be highly distinguished in any European country and most of them have followers and students around them who would do credit to any Western seat of learning. All of these should be respected and appreciated by us Englishmen and Europeans as working on a plane of absolute equality with ourselves.

* Truths About India Series I pp 89 New York (1923)

† In this connection it may be of interest to some to know that in his Encyclical published March 1927 His Holiness the Pope declares that the belief that the dark-skinned races are inferior to the white is a mistake. He affirms that long experience proves that these alleged inferior peoples are fully equal in mentality to the white peoples.

In 1911 Mr Spender went to India to attend the Great Delhi Durbar. On his return, he published in his paper (January 29, 1912) the following interesting statement of the high impression he had received from the Indian people.

India may impress one as poor or squalid as mediaeval but never for a moment can it strike him as a crude a barbarous country. Evidences meet him everywhere of art originality and refinement. He will see more beautiful faces in a morning's walk in an Indian bazaar than in any European city and he will be charmed by the grace and courtesy of the common folk. It may surprise Englishmen to hear it but many Indians seriously express the opinion that the Indian is mentally the superior of the white man.

HAVE INDIANS INTELLECTUAL AND LITERARY ABILITY?

At the St Andrews dinner in Calcutta in December 1901 the English Vice-chancellor of the Calcutta University spoke as follows of the Indian people, their intellectual ability and their great literature.

Masterpieces of thought and language were produced in this country at a time when our ancestors as Englishmen were little better than savages and though the age of masterpieces may have gone by none of us who come into contact with educated natives of India to-day can doubt that their intellectual power is worthy of their ancestry.*

HAS INDIA GREAT MEN?

General Smuts, Premier of South Africa, in an address delivered in Johannesburg August 26 1919 called attention to the fact that the civilization of India instead of being low as some suppose is high. He said

I do not look down on Indians. I look up to them. Two with whom I have come into particularly close contact of late Lord Sinha and the Maharaja of Bikanir I regard as among the ablest men I have ever known. There have been Indians who have been among the greatest men in the history of the world. There have been Indians who have been among the greatest leaders of the human race whose shoes I am unworthy to unite. Nor is there any one else here tonight worthy to do this.

On urging that commissions in the army high as well as low, should be granted to Indians exactly as to Englishmen, he was asked if he would like to serve under an Indian. He replied at once: Why not? I would be glad to serve under an able Indian.

* *Indian Messenger* December 27 1901

ARE INDIANS TRUTHFUL ?

Colonel Sleeman, an Englishman who lived long in India and mixed intimately with all classes, and who was extraordinarily well qualified to judge, said,

"I have had before me hundreds of cases in which a man's property, liberty or life has depended upon his telling a lie and he has refused to tell it."

ARE INDIANS HONEST ?

Says Alfred Webb President of the Tenth Indian National Congress

"In Madras in 1891 I conversed with a sewing machine agent, who had travelled and done business over the globe. His principal trade now was with Indian tailors and seamstresses selling machines to be paid for by monthly instalments. I asked the proprietor of bad debts in such business. He said he had found them as high as ten per cent. in England. How high in India ? But one per cent," and such chiefly with Europeans. Practically we have no debts with Indian parties. If it comes that they cannot pay instalments they will give back the machines.

In open crowded bazars or market places on railway platforms in India are money counters. They sit at tables upon which are heaps of coins of various denominations. Could money be thus exposed at similar gatherings in Europe ?

ARE INDIANS MORAL ?

At a meeting of the East India Association held at the Westminster Palace Hotel London in December, 1901 Sir Lepel Griffin, the President, is reported as paying the following tribute to Indian morality

"The Hindu creed is monotheistic and of very high ethical value, and when I look back on my life in India and the thousands of good friends I have left there among all classes of the native community, when I remember those honorable industrious orderly law abiding sober manly men I look over England and wonder whether there is anything in Christianity which can give a higher ethical creed than that which is now professed by the large majority of the people of India. I do not see it in London society. I do not see it in the slums of the East End. I do not see it on the London Stock Exchange. I think that the morality of India will compare very favorably with the morality of any country in Western Europe."

ARE INDIANS TRUSTWORTHY ?

Sir Guy Fleetwood Wilson, long a distinguished British official in India, pays the following striking tribute to the

"Dutt's Civilization in Ancient India" Vol II
p 159

† "The People of India," p 51

trustworthiness of the many Indians filling responsible positions under his charge. In a speech made when he was retiring from the office of Finance Member of the Indian Government, in 1913, he is reported as saying

"I wish to pay a tribute to the Indians whom I know best. The Indian officials high and low, of my department, through the years of my connection with them, have proved themselves to be unspanning of service and absolutely trustworthy. When need arose they have done ungrudgingly a double or triple amount of work. When their advice was sought they have given it to me fully and frankly. As for their trustworthiness, let me give an instance. Three years ago when it fell to my lot to impose new taxes it was imperative that their nature should remain secret until they were officially announced. Everybody in the department had to be entrusted with this secret. Any one of these, from high officials to low paid compositors of the Government Press would have become a millionaire by using that secret improperly. But even under such tremendous temptation not one betrayed his trust. So well was the secret kept that a ship laden with silver in Bombay delayed unnecessarily its unloading for three days and was consequently caught by the new tax."

HAVE INDIANS REFINEMENT, SPIRITUAL INSIGHT AND BRAIN POWER ?

Sir Michael Sadler Vice Chancellor of the Leeds University England, and President of the Calcutta (India) University Commission, in a Lecture delivered in Leeds, in 1919, is reported as saying

One cannot walk through the streets of any center of population in India without meeting face after face which is eloquent of thought, of fine feeling and of insight into the profounder things of life. In a very true sense the people of India are nearer to the spiritual heart of things than we in England are. As for brain power there is that in India which is comparable with the best in our own country."

ARE INDIANS COMPETENT EDUCATORS ?

After his return from three months of study of education and educational institutions in India Mr Sidney Webb delivered an address before the Students' Union of the London School of Economics on "What are we to do about India ?" In this address (as reported in the London weekly, India, of December 6, 1912), he said that among the many colleges he had visited he could not avoid the conclusion that some of those which had, from the outset, been established by Hindus, managed by Hindus, and staffed by Hindus, without the intervention or co-operation of any European

were among the very best colleges that he had ever seen—like for devotion of the professors ability of the teaching staff success in examinations and what was most important of all in the development of intellect and character in the students. He regretted to have to say that some of the Government colleges that he had seen which were entirely managed by Englishmen and nearly wholly staffed by English professors compared very badly indeed with the exclusively Hindu colleges in various respects and unfortunately often in the devotion and intellectual ability of the professors. He instance particularly the building up of The Ferguson College at Poona solely by Indian scholars and its great success the organization of so great and pervading a movement as the Arya Samaj the continued growth and development of the D A V College at Lahore wholly Indian and the successful working out of the quite novel educational experiment of the Gurukula at Hardwar

DOES INDIA HOLD A PLACE OF IMPORTANCE IN THE WORLD'S INTELLECTUAL PROGRESS?

In an address delivered in India in March 1926 Sir Basil Blackett a high official in the British Indian Government, said

India long ago revolutionized mathematics and provided the West with the key to the most far-reaching of all the mechanical instruments on which its control of nature has been built when it presented to Europe through the medium of Arabic the device of the cypher and the decimal notation upon which all modern systems of numeration depend. Even so India to-day or to-morrow will I am confident revolutionize Western doctrines of progress by demonstrating the insufficiency and lack of finality of much of the West's present system of human values

DOES INDIA PRODUCE GREAT MEN OF ACTION AS WELL AS GREAT THINKERS?

Sir Valentine Chirol who is loath to give over praise to Indians says in India, his latest book (1926) page 6

"At all times in her history India has produced some of the finest and most subtle intellects of which the human race is capable and great men of action as well as profound thinkers

HOW DO INDIANS COMPARE WITH ENGLISHMEN?

Mr A O Hume who served in India nearly forty years and who held many high

offices among them that of Secretary of the Government, made the following statement before the Public Service Commission Calcutta March 1 1887

The fact is—and this is what I who claim to have had better opportunities for forming a correct opinion than most men now living desire to urge there is no such radical difference between Indians and Britons as it generally flatters the latter to suppose. If both races be judged impartially and all pros and cons be fairly set down on both sides there is very little ground for giving the preference to either. If you compare the highest and best of our Indians with the ordinary run of the rabble in England these latter seem little better than monkeys beside grand men. If you compare the picked Englishmen we often get in India trained and elevated by prolonged altruistic labors and sobered and strengthened by weighty responsibility with the rabble of India the former shine out like gods among common mortals. But if you fairly compare the best of both those in each class would exhibit excellences and defects less noticeable in the other and neither can as a whole be justly said to be better or worse than the other. The whole misconception regarding the people of India arises from the habit which Englishmen in India have acquired of regarding only the blackest side of the Indian and the brightest side of the English character and from their theories as to the capacities of the two races being based on a consideration of the worst specimens of the one and the best specimens of the other

ARE ENGLISHMEN SUPERIOR TO HINDUS?

In his book "The Expansion of England" Professor J R Seeley denies that the English are superior to the people of India. He says

We are not cleverer than the Hindu our minds are not richer or larger than his

ARE INDIANS INTELLECTUALLY EQUAL TO THE ENGLISH?

Speaking in London in May 1904 at the annual meeting of the Society for Promoting Christian knowledge Lord George Hamilton for some years Secretary for India was reported as saying that

There were hundreds of millions of persons in India whose civilization was much older than that of the English that they possessed a literature, architecture and philosophy of which any country might be proud and that at the present time there were other tens of millions whose intellectual capacity was fully equal if not superior to that of the English (Report in India the London weekly, June 3 1904)

ARE THERE INDIANS EQUAL TO THE BEST ENGLISHMEN?

In an article in the Nineteenth Century and after of February 1911 Lord Morley

Secretary of State for India, speaking of the most accomplished and highly trained native officials in India, declares them to be 'As good in every way as the best of the men in Whitehall.'

ARE INDIANS CAPABLE OF COMPLYING WITH ENGLISHMEN ?

Sir Valentine Chirol says in his last book "India," (p 10)

'There is a rapidly increasing class of Indians, not a few of whom are highly gifted capable of mastering the literature and, though more rarely the science of the West and qualified to compete with Englishmen in almost all the higher activities of modern life in the public services on the bench at the bar in the liberal professions in school and university teaching in literature and in the press and if more recently in commerce and industry and finance

It is this new class of Indians who have assumed the political leadership of India and it is they who to-day dominate the new representative assemblies designed to accustom us in an Indian atmosphere parliamentary institutions and progressive forms of government presumed to be capable of future adjustment, to the newest conceptions of democracy"

Elsewhere Sir Valentine Chirol says

'Indian brains when given a fair chance are no whit inferior to European brains

ARE THERE INDIAN LEADERS IN PRISON WHO ARE EQUAL IN CHARACTER AND CULTURE TO BRITISH MEMBERS OF PARLIAMENT ?

In a speech made in the British House of Commons during the India Debate in July 1922, Mr Ben Spoor, one of England's best informed men about India, said

At the present moment over 20 000 political prisoners are in jail in India. They include men of high character, men whose character has never been questioned. They include men of profound culture—of a culture I submit, probably greatly in excess of that of the average Member of this House of Commons"

ARE INDIAN JUDGES EQUAL TO ENGLISH JUDGES ?

Sir Henry Cotton, in his book, "New India," (p 140), says that the Lord Chancellor, the Earl of Selborne, testified as follows from his place in Parliament

'My lords, for some years I practised in Indian cases before the Judicial committee of the Privy Council, and during those years there were few cases of any imperial importance in which I was not concerned. I had considerable opportunities of observing the manner in which, in

civil cases, the native judges did their duty, and I have no hesitation in saying—and I know this was also the opinion of the judges during that time—that the judgments of the native judges bore most favourable comparison, as a general rule, with the judgments of the English judges. I should be sorry to say anything in disparagement of English judges, who as a class, are most anxious carefully to discharge their duty, but I repeat that I have no hesitation in saying that in every instance in respect of integrity, of learning, of knowledge of the soundness and satisfactory character of the judgments arrived at, the native judgments were quite as good as those of English judges."

ARE INDIANS FIT, MORALLY AND INTELLECTUALLY, TO MANAGE THEIR NATIONAL AFFAIRS ?

Mr Hodgson Pratt, long a prominent member of the British-Indian Civil Service answers these questions as follows (in *India*, the London weekly, November 10, 1903)

'As regards the possible qualities which have delayed the admission of Indians to a larger share in the management of their national affairs it cannot be said that there is any evidence of moral or intellectual unfitness. When posts of great responsibility requiring qualities of no mean order have been filled by Indians whether in British or Native States they have evinced high capacity as well as trustworthiness"

HAVE INDIANS THE QUALITIES NECESSARY FOR RULING ?

Mr O F Abbolt, author of "Through India with the Prince of Wales," answers in the *London Nation* of July, 1903

One often hears that the Indian lacks many of the qualities for rule upon which the Englishman prides himself. Among these qualities are a high sense of duty impartiality incorruptibility independence of judgment and moral courage. Now, I submit, no better test for the possession of those qualities could be devised than the placing of the Indian in a position which demands the constant display of those qualities. Such a position he already occupies in the law courts. Every day the Indian Judge is called upon to pass sentence in a variety of cases calculated to test his sense of duty, his impartiality, his integrity, his independence of judgment and his moral courage. How has he stood the test? By the confession of every European in India—including amusingly enough those who deny to the Indian the possession of those virtues—the Indian judge is not a jot inferior to his English colleague."

ARE INDIANS COMPELLED FOR HIGH EXECUTIVE OFFICE ?

Sir Henry Cotton, who served long in India, holding high offices there, and later

was a prominent Member of Parliament, says in his book, *New India*" (pp 141-142)

The natives of India are assumed to be unfit to have charge of districts it is convenient to assume that all Englishmen are cool and wise in danger, while no natives are so, and that consequently only Englishmen and no Indians are competent to be trusted with independent charges. By a process of the grossest self adulation we persuade ourselves to believe that natives are only useful as ministerial servants but that the work of a district, if it is to be done at all demands the supervision of an English officer. The truth, however is that the Indians as of course they must be are the backbone of our administration. The burden and heat of the day are already borne by Indian subordinates and in the event (as occasionally must be the case) of an incompetent European being in charge of a district the whole of the work is done by his Indian deputies and clerks.

IS INDIA FIT FOR SELF RULE?

After his return from India, Keir Hardie declared

It cannot be alleged that the Indian people are unfit for self government. The many Native States which are ruling themselves is a proof to the contrary which cannot be gainsaid. A great educated class exists in India which manages universities and higher grade schools supplies the country with lawyers professors news paper editors and the heads of great business concerns. Wherever these men have an opportunity they prove that whether as administrators or as legislators, they have capacity of a very high order."

ARE INDIANS INFERIOR TO ENGLISHMEN AS ACTUAL LEGISLATORS?

Dr V. H. Rutherford, long a prominent English Labor Leader, and member of Parliament, tells us in his last book, *"Modern India Its Problems and Their Solution"* (pp 82-84), that after attending debates (in 1926) in the Indian National Legislative Assembly and in several Provincial Legislatures, where British and Indian members were speaking and working side by side he "found a definite inferiority among the Englishmen as compared with the Indians." He declares

Although I have a natural bias in favor of my own countrymen truth compels me to state that in these Legislative bodies the Indians far surpass their English rivals in brilliancy of wit, logic, knowledge, breadth of vision and ideals of statesmanship."

Asking the question, "What station in life would these men have occupied if they had remained at home in England instead of coming to India?" he answers

"Not more than one or two per cent. would have risen higher than a first class clerk in a government office. As a matter of fact, India is governed by first-class clerks from England, with a few lordlings thrown in as governors. One truth stands out like a beacon light, namely that Indians are infinitely better fitted to govern India than are their English overlords. In sheer intellectual ability and parliamentary capacity Indians outshine their British adversaries."

In conclusion Such are a few of the evidences which offer themselves to all who care to know, of the high civilization of India, of the undeniable intellectual, moral and practical qualities of the Indian people,—their general faithfulness, their trustworthiness, their honorable character, their eminent ability and efficiency in the discharge of the duties and responsibilities placed upon them, not only private but in connection with every kind of official or government position which they have been permitted to hold.

Of course, these testimonies do not mean (as nothing in this book means) any claim or even dream that the Indian people are all angels. What people in the world are? Nor does anything said in these pages mean that they are all Platos or Bacons or Gladstones. On the contrary, they rank all the way from men very much nearer Gladstones and Bacons and Platos than many of us know, down to men, women and children as low and degraded as any found in our European or American slums.

But, we submit, basing our verdict on the above testimonies coming from competent Englishmen (and, as has been said, hundreds of other similar testimonies might easily be added), have we not a right to affirm that in natural ability the Indian people as a whole are little, if any, inferior to the people of even Great Britain, and that, if allowed the education, training and practical experience

in the management of their local and national affairs which every nation ought to have (but of which their British masters have cruelly deprived them), they would be able to maintain a government not unworthy to rank with that of Japan and the best governments of Europe.

[This article is a chapter from the Author's forthcoming work, *India's Case for Freedom*.
Editor *M. A.*]

RICE CULTURE IN ITALY

By D. ANANDA RAO, B.Sc.

Deputy Director of Agriculture, Madras

IN a country like India where rice is not only the staple food crop of her people but one that has been for centuries under cultivation, one would suppose that in its cultivation methods it has reached a high degree of excellence and in its yield it stands second to none in the world.

Looking into statistics one finds that India ranks highest in the area of rice it grows. During the years 1920-24 (average) she had to her credit 80,683,900 acres and there is no country in Asia whose acreage comes anywhere near it. Turning to Europe where rice is still grown more or less as a novelty, it is found that there are only five countries which grow it to any appreciable extent. Of these, Italy and Spain take the first two places. The former country during the same period grew nearly 300,000 acres of rice which is altogether an insignificant area when compared with that grown in India. Such being the case, it should be pardonable if either the cultivators in India or those who work in their interests minimise the claims of other countries specially in Europe where rice occupies but a small area and whose people attach greater importance to other crops than it.

However India has a very different story to tell, as regards its yield per acre. The average output for the area quoted above for the years 1920-24 comes to 47365.017 tons, whereas in the case of Italy it is 491,968 tons. In other words, while the yield per acre in India is reckoned at 1310 lb. that of Italy it is 3,670 lb. This is

astonishingly high. Apart from what one finds in these statistics which reveal bare facts in cold print, Mr. Galletti, a Madras Civilian himself an Italian, drew pointed attention to the methods of culture and high yields obtained in Italy in his very interesting articles published in the *'Statesman'* a year or two ago. While on a holiday tour in Europe last summer, I was tempted to visit Italy with the express purpose of seeing for myself the conditions which render such high yields possible. On the advice of the International Institute of Agriculture at Rome I visited Vercelli, the chief centre of rice cultivation in Italy where there is an agricultural experimental station of which Professor Novello Novelli is the head and to whose untiring energies and high intellect the present record yields are largely due. Piedmont, the region in which Vercelli is situated is the most productive of all other regions of importance are Lombardy, Emilia, Veneto, Toscana and Sicilia.

Professor Novelli spared no pains in taking me himself to different farms, travelling long distances by car which enabled me to observe at firsthand the real condition of the crops and the people who were responsible for their cultivation. My visit synchronised with the harvest of rice. I was thus able to see it to best advantage. The region visited is situated in the valley of the Po and is thus fed by it and its tributaries. In this region the most productive centres are Vercelli, Mortara, Novara, Pavia, Milano, and Cremona. The area of rice

cultivation is spreading gradually to the east as far as the sea where the Po empties itself to the south however, there are no such irrigational facilities, the province of Lucca growing only a small quantity. During the last year about 700 hectares were cultivated in the region of Paludi Pontina in which Rome is situated.

The spread of rice cultivation has seen many vicissitudes mainly due to economic causes. Taking the quinquennial periods from 1800 till 1924 the following indicates the area under rice in hectares (one hectare is equal to 2.4 acres) and the yields in quintals (one quintal is equal to 197 cwt)

Year	Hectares	Quintals
1800-74	232,670	4,810,900
1875-83	201,800	3,549,900
1890-94	182,450	3,046,400
1901-05	175,365	4,434,500
1910-14	144,998	4,878,700
1915-19	138,618	5,218,300
1920-24	121,408	4,698,800

It is obvious that while the area has during the last half a century decreased by 50 per cent the average yield during the same period has nearly doubled itself. In other words, while the average yield per hectare during the quinquennium 1800-74 was 20 it has risen to 38 quintals during the quinquennium 1920-24. Such progress must be attributed to the methods of culture rather than to the inherent richness of the soil. The river Po does not bring with it in its course any high fertilising materials flowing as it does through granite rocks.

The methods of culture in Italy are in many ways similar to those one is accustomed to in India. For example, one finds the method of sowing by hand still the common practice adopted there and it is said that about 80 per cent. of the total area is sowed by this method. About 10 per cent is drilled by machines while another 10 per cent, is under transplantation. In fact, this last method came into vogue as late as 1912. With regard to weeding, manual labour is employed even more largely than in India. It is astonishing to find that very large expenditure is incurred on weeding which as will be described later due to the method of rotations adopted. Women walk into the fields and weed exactly as our women do and Professor Novelli brought to my notice the amount of weed that was collected and thrown on the main bunds, the remnants of

which could be seen even at the time of my visit. Transplantation is also done by manual labour but high cost of labour prevents this practice spreading rapidly. Attempts are now being made to substitute machines. I also witnessed the harvest which was being done by means of the sickle very similar to our own, with but slight modifications. But there are certain outstanding differences which it would be worth our while to consider here.

To one who is accustomed to rice cultivation in India, the most striking difference even to a casual observer is the way that fields are laid for irrigation purposes. Small bunds are absent and at first sight the whole area looks like one vast field. With the exception of large bunds carrying between them irrigation or drainage water there are practically no intervening bunds and one would see even 20 to 30 or even more acres without being interrupted by bunds which one so frequently sees in our country. Great trouble is taken to level the lands and a good deal of terracing is done wherever necessary. In fact, several years of gradual levelling should be done before the land is put under rice. The relatively high labour cost at present precludes levelling to any large extent, so that a good deal of such work had to be done in the preliminary stages. The smiling landscape that one now witnesses is not the work of today but is the outcome of hard and diligent work of former generations of farmers who levelled, drained and reclaimed land which at first sight was altogether unsuited for agricultural purposes. The final levelling of course is done as in India by means of levelling boards, only horses being substituted for oxen. Another reason for this state of affairs is that water is allowed to flow gently to the fields, flooding of fields as is done in India is altogether absent. Apart from helping to dispose with innumerable bunds it is possible under such a practice to economise a good deal of water. This problem highly interesting in itself is worth further consideration. From the main irrigation channels, small distributing channels are taken off about 6 yards apart through which water is gently let into the rice plots. There is thus no waste of water in its distribution to cultivators. The quantity of water required to mature the rice crop having been previously worked

out only the required quantity is measured and given to cultivators. This distribution of water is left entirely in the hands of the cultivators themselves. In 1853 an association called West Sesia association of cultivators was formed at Vercelli by the famous Cavour which empowered the associations to distribute water to its members. To day there are numerous associations of that kind throughout the country. The several rice zones are divided into districts or provinces and each sends its own requirements to the Central authority which is the association of cultivators. These associations pay to Government a certain sum for the use of water from April to the end of September. The individual cultivators in their own turn pay to their association on a certain sum for its use. It is therefore to the interest of the cultivator himself to use the water with the greatest possible economy since the larger the saving the further use he can put it to. The association in its own turn exercises great economy in its distribution and sees that percolation and wastage are prevented wherever possible. I had the opportunity to visit Canal Cavour across the river Sesia which is dug below it and which takes water to Novara at one end and to Chivasso at the other. Although this canal is one of the largest there is now a net work of canals in the valley of the Po which is responsible for the greatly increased richness of the zone of Piedmont. Irrigation canals are no doubt of recent date compared with our ancient systems. I believe the irrigational canal system was introduced only during the fifteenth century and yet there is no doubt that Italy is far ahead of India with regard to the very large number of canal systems and the way water is utilised to the maximum advantage. My information is that the average consumption of water per hectare is about 3 litres per second for rice and one litre for other crops like meadows &c.

Besides the canals owned by the Government there are others which are the property of the cultivators themselves who do not pay anything for the use of such water. Such proprietors through whose territories these canals run maintain them at their own cost. Such a system of ownership of canals and the maintenance and distribution of water by the cultivators themselves is unique. In a country like India where water at great expense is harnessed and preserved the

waste of water that is indulged in in the deltaic tracts of the country and though perhaps to a lesser degree even in the areas under tank fed irrigation would be considered criminal from the standards which hold in Italy.

A very interesting point with regard to irrigation of the rice is that the flow is not constant as in India. On two occasions during the growth of the crop the fields are dried. Twenty five days after sowing water is drained for four or five days. The beneficial effects of soil aeration and root penetration are obvious at this stage. After this water continues to flow through the fields till after the last weeding which may be second or third according to the weeding of the fields. Withholding water at this stage probably tends to arrest too much vegetative growth apart from aerating the soil. Before water is let in again artificial manures are applied after which irrigation is constant until a few days before harvest. During the last few months water is maintained constantly in order also to keep the temperature of the soil uniform.

Certain permanent meadows called *Marcita* are kept up even during winter by constant irrigation. This constant flow of water keeps the soil under uniform temperature. Thus while all cultivation is ordinarily at a stand still under irrigation it is possible to maintain a steady supply of fodder for the cattle.

Another outstanding feature of Italian rice cultivation which is different to ours is the rotation of crops followed. Rice year after year or as it is called *risaia stabile* used to be the common method in its early history. This practice has given place now to systematic rotation of crops which claims to have increased the output of rice. There is no hard and fast rule as to the crops introduced in any particular rotation but rotation as such is adopted almost universally. Around Vercelli it is usual to take one crop of a cereal like wheat or oats followed by one or two years of pasture after which 3 or 4 years come under rice. In localities where clay soils predominate and where drainage facilities are lacking for example in Bologna and Mantova there is only one year of rice in the rotation. Before the harvest of rice there is an interesting practice of sowing rape, clover and other pulses which when grown are fed to cattle in spring. This is then allowed to

grow again and turned into the soil as green manure. This is a practice similar in part to that current in parts of South India. For example in the deltaic tracts under the Krishna sunnhemp is grown after the harvest of rice but when cut it is stacked along with rice straw to be fed with it.

In the region of Vercelli for example rice occupies about 55 percent of the total area the cereals about 15 percent and pasture about 30 percent. In other regions rice may occupy only 20 percent and other cereals 35 percent and industrial crops like hemp would occupy about 15 percent. The amount of the area under rice in the rotation is dependent on soil suitability or other economic factors. Owing to pasture crops following rice in the rotation the land becomes foul with grass weeds. Consequently two and sometimes three weedings are given. The first weeding is generally at the end of May and the second in June and the third in July. The cost of weeding during the first year runs up to about 1500 lire per hectare. This expenditure is about 75 percent of the total cost of cultivation but during succeeding years it is not so heavy.

Great strides have been made in the application of artificial manures for agricultural crops. People having been for long accustomed to the use of such manures readily apply them to a paying crop like rice. Farmyard manure no doubt is the basal manure on which they depend up to 200 quintals per hectare being used. Super phosphate ammonium sulphate Calcium Cyanamide and sulphate of potash are the chief manures used the total cost under these running up to about 800 lire per hectare. These artificials are applied twice once in conjunction with farmyard manure as an initial dose and later when the crop is three months old. It is a note worthy fact that the attacks of mildew have been greatly controlled by rational cultivation and application of potassium sulphate.

Another matter which arrested my attention was the excellent uniformity the growing crops exhibited. I have seen hundreds of acres of one variety of rice all growing uniformly to one height free from mixtures and bearing heavy earheads. These were the progeny of selected seed issued to cultivators for seed purposes. The particular variety I saw was the one selected for early maturity (precocious) with

very little straw but abundance of grain. To begin with such seeds are given preferably to small cultivators who are likely to pay special attention and the seed is distributed in succeeding years over large areas. Of the several varieties tested Japanese varieties seem to have suited Italian conditions best and selections from these have been made with the result that today there are about 85 percent of the crop under these.

There is nothing that impressed me more than the advance made in Italy in the employment of mechanical methods in the cultivation of rice and in taking it to the market as a finished product. For ploughing tractors are largely employed one or more tractors being found in all farms of decent size. Electricity plays a prominent part in the operation of thrashing. The harvested rice is brought into the farm yard on carts drawn by horse but these are hauled up to thrashing machines run by electricity. About 30 quintals are thrashed per hour in other words an acre's produce is thrashed in two hours. By the time rice harvest is finished winter sets in and with it the process of drying the seed becomes difficult. The early maturing varieties already referred to are got in in September when there is yet plenty of sunshine enabling natural drying. But in the majority of cases artificial drying is to be depended on by means of desiccators heated by steam. Three dryings are considered sufficient and about 400 quintals can be dried in this way in 24 hours.

It is usual in India to sell rice in the market as paddy but the Italian cultivator puts it through the further process of bulking by machinery before it is sold. He thus keeps the byproducts to himself for feeding his live stock and rice is straight away sent to the market for sale or export.

It is therefore obvious what an important part machinery plays in the methods adopted both in cultivation of rice and in taking it to the market. Reference has already been made to the transplanting machine which to me is the last word on the ingenuity of the agricultural engineers of that country. It is extremely simple and yet ingeniously constructed. It consists of a box of eight compartments into which seedlings are put and sufficient to plant about 150 metres. The box is replenished at each end of the field. One man does the whole operation. There are two sets of ploughs below one

behind the other the first set for opening furrows and the second for covering the same. Seedlings are dropped by means of tongs which picks up each seedling as it comes down the box at regular intervals and drops it into the furrow opened by the first plough. It is said that an hectare is transplanted in 2½ hours. The defect at present lies in the fact that the seedlings do not drop down at regular intervals and further trials are under progress. With the high cost of labour it is bound to become a boon to the cultivators and transplantation will naturally become more popular than at present.

During my visit I had opportunities to see the economic condition of the farmers and peasantry. I also enjoyed the hospitality of some of them and wherever I went I was impressed that farmers in that region are in affluent circumstances. Without hesitation I would say that the farmers here compare very favourably with their compatriots in Britain although the latter country is still the richest in Europe. The landed proprietors in this region possess even four or five hundred hectares of land under their management but from the information I could get I understand that about 300 hectares may be considered an average holding of the well-to-do people. They are all educated but it was easy to recognise the farmer type among them that they had abundance of worldly goods was evident everywhere. Modern conveniences are available for all of them for example electricity is utilised not only for the machinery but also in their homes. Almost all of them own motor cars, radio machines with connections even to London were found in several houses. In fact they appear to indulge in every manner of modern luxury. Some proprietors living not far from large cities have separate establishments of the farms where they stay throughout the cultivation season and go back to their city residences during the winter when work is slack. Not only is constant supervision exercised by them but their influence over the peasantry is felt to a remarkable degree. It must however be stated that in Italy living is less expensive than in many parts of Europe. Large proprietors have subtenants under them to whom are leased farms of various sizes according to their requirements or position. Even these small peasants are by no means poor. They enjoy

comforts in proportion to their scale of life and I have it on authority that three hectares of land are enough to keep them in reasonable comfort. Insanitary conditions with disease taking constant toll in former days were attributed to rice cultivation but happily this state of things has been largely replaced by a healthy set of people whose economic progress and trade prosperity are at a high level.

Turning to the labouring classes it is found that emigration during agricultural seasons from poorer localities like Montana and Bologna takes place to more well-to-do regions like Vercelli. This is a feature quite in common with our own country. People from dry land districts go to wet land localities during transplanting and harvest seasons. Even the peasantry are comfortably housed. Some of the houses are two storied fitted with electrical lighting and with all up-to-date sanitary conveniences. A farmer whom I had the privilege to visit and who owns about 300 hectares of land has 35 families under him. They have a school for the children, a reading room and a library for the elders. They all appeared extremely happy and contented and that they looked upon their farmer with respect born of love and gratitude. Payment both in kind and money is in vogue. Payment in kind is preferred for two reasons at present the value of lira is constantly changing and therefore payment in kind is much more satisfactory. Again the quantity of perquisites that they receive is on the whole more than their actual requirements so that they have an option to dispose of the extra quantity at market prices either to others or to the farmers themselves who are willing to take them back at the rates prevailing. Besides having houses provided for them they receive on an average about 9000 lire per annum which includes two quintals of rice, two quintals of wheat and eight quintals of maize per annum and also get ½ litre of milk per day per person. In actual money they receive about 3000 to 4000 lire. They are also permitted to keep pigs. Goats often take the place of cows in many localities—a practice prevalent even in France. Fish culture is an interesting and paying subindustry grown out of rice cultivation. Casual labourers work about 8 hours a day and receive at the rate of 36 lire per man and 28 lire per woman per day. At the time of my visit

130 lire were equivalent to one pound sterling

Dairy farms pure and simple as found in Britain are rare except near the Alps where conditions are such that natural meadows are available in abundance. Mixed farms are therefore the rule that is the farmer not only has an arable farm to run but has also large herds of milking cows to which particular attention is paid. I saw several cows of the Swiss type in excellent condition whose yields compare very favourably with our best milking breeds. Eight litres per day or 2500 litres per lactation is considered an average yield per cow. Cattle insurance is very expensive and therefore horses alone are insured.

Such conditions cannot be considered to be prevailing all through Italy. Wet land cultivators in the east are not so well off as those to be found in the region of Piedmont or Lombardy. From what I have seen I am impressed that rice cultivation here has brought much prosperity to the people and when compared with similar cultivators in India they are very much better off both in their social and economic welfare.

It is one thing to know what Italy is doing in its agricultural practices and quite another to be able to introduce these bodily into India. It is neither possible nor desirable to put into practice all that is being done in Italy with regard to rice culture. I do not think that time is ripe for introducing anything in the shape of agricultural machinery as practised there. Firstly labour is not dear enough to make it worth while to introduce tractors or even transplanting machines, nor is there capital enough to launch into the purchase of expensive threshers. We have plenty of sunshine at the harvest time to be independent of artificial desiccators. The only point in this connection that might be done to the advantage of the cultivator in India is to deliver rice as a finished product instead of as paddy. Hulling machines and rice factories have covered our country like mushroom growths but unfortunately these are run not by the growers but by others. Co-operative hulling is suggested as the holdings of individual cultivators are small. There are however some lessons that we can learn from Italy. Economy in the distribution of water is an improvement to which I would attach paramount importance. It has

been established beyond doubt that in Italy to obtain bumper crops there need not be a constant flow of two or three inches of water throughout the growing season of 5 or 6 months. I saw excellent crops which were estimated at 60, 65 and even 70 quintals per hectare. I understand that there are crops which produce even 80 quintals per hectare but 50 quintals may be taken to be a very safe average. This shows that with much less water than we are accustomed to in India, equally good if not better crops are being obtained there. Making due allowance for the climatic differences which are perhaps more favourable in Italy, I think steps should be taken to see how far the present irrigation supply can be extended to other areas.

I am of opinion that research in this direction is absolutely essential. Attention may with advantage be directed to the study of these problems both under canals and tanks and seen by experiment how far water can be economised without detriment to the present yields. These have to be solved on Government farms in the first instance and when this is successfully done it should not be difficult to demonstrate to the ryots at large like other demonstrations. Space does not permit me nor does it lie within the scope of this article to suggest details or such researches. I strongly feel that there is no problem in the improvement of Indian agriculture that is more vitally important than to see how much further the present water supply can be utilised than at present. One is constantly reminded of the many occasions when water is simply wasted while at others there is such scarcity of it. Yet there is no gain saying the fact that information on the subject is scanty. I can only indicate here the magnitude and urgency of the problem.

Secondly it is worth our while to consider how far rotations which are being followed in Italy could be applied with advantage to our methods. None would deny the fact that systematic rotation is one of the potent means by which a system of cultivation of any country is improved. It goes without saying that with rice following rice very good results are being obtained in India. But if it were possible to intersperse other crops with rice in a definite number of years and produce equally good crops if not better than at present, cultivators would be more than thankful for information in this direction especially if more fodder for

cattle is also brought into the bargain. It has been possible for the Italian cultivator to grow pasture crops in rotation with rice. It may be argued that in India it is not easy to obtain a pasture crop within one or two years. Here again there is opportunity for the Botanist and the Agriculturist to investigate what kind of grasses could be grown sufficiently, quickly and in sufficient quantity to make it worth while for the cultivators to adopt 11 certain grasses could be established within a year and these produce, say two tons per acre, the only problem that would then have to be solved is whether the returns obtained during, say a period of 5 years of rice in succession are more or less than those obtained by having two years of grass and three years of rice. As a matter of fact there are in vogue several rotations in rice. It only requires that these are adapted to local conditions and attempts made to see how far the fodder problem could be solved. In certain deltaic tracts where indifferent second crops are the rule it may be worth while to replace such by fodder crops. Under well irrigation rice is grown in rotation with other cereals and industrial crops. It is desirable to study whether such a practice could be extended to wet lands. The cultivator when left to himself would certainly prefer to receive abundance of water and do the easy cultivation which rice entails but any thing instructive can be suggested to him only after it has been proved by experiment that a fodder can be successfully grown in rice fields and that by growing it once in three or four years in rotation not only is the total average out-turn of rice not decreased but more fodder is produced during that period than he has been able to buy following his usual practice.

An appreciable amount of progress in rice cultivation could be traced to the systematic manuring that farmers in Italy follow. They are in the first instance more enlightened than our farmers. They can understand at least to a certain extent the theory as applied to artificial manuring and it does not therefore require very much effort to put into practice what he or his neighbour has learnt in the class room. Again, he has the money to spend liberally on manuring, on the other hand, we are up against an uneducated clientele which is poor at the same time. It has been the practice of the Government departments to

suggest to cultivators such manures as are within their reach. Efforts have been made by them to put before commercial firms the desirability to bring down the prices of artificial manures. Until the prices are reduced the cultivators will not buy them. Unless the cultivators buy in large quantities it will not be worth while for the firms to bring the prices down. We are thus in an *impasse*. More concerted effort in demonstration and propaganda seem to be necessary to make it evident to cultivators that it does pay to use artificials more freely than they are at present inclined to, but there are already signs in the horizon that well to do farmers are becoming alive to the urgency of this problem because on the one hand, there is insufficiency of cattle manure and on the other that which is available is of a poor quality. The commercial firms due to the competition are, I believe, beginning to reduce the prices. This is certainly a bright augury for the future.

In an educated community it is an easy matter for an expert to spread the result of his researches. It is therefore possible in Italy to leave good seed evolved from strains in the hands of cultivators themselves who not only take good care to see that they are not mixed but also help very largely in their distribution to others. Such things would be possible also in our country if education to adults is imparted more widely than at present, for example, visual instruction by means of talks with the aid of lantern slides or cinema shows, would improve the situation. It is obvious that the greatest obstacle to agricultural progress has been the illiteracy of the farmers and the sooner that such education spreads among them the quicker will be the pace of the progress of agricultural improvement.

Professor Novelli speaking somewhere on the insanitary conditions which prevailed in former days in rice growing tracts attributes it not so much to the growing of rice itself, but to "intellectual poverty which is the sister and hand maid to rural poverty". If this could be said of Italy, what could not he said of India?

One last word. The standard of living of the labourer in the rice tracts in Italy is high while that of his Indian compatriot is low. It is not surprising therefore that the latter is inefficient. If, however, steps are taken to feed, house and clothe him and treat him better it is likely that he would

of mystical charm One of the most delightful numbers ever given in Atlanta certainly the most colorful and interesting programme of its present season

Ragini Devi is not only an accomplished singer and dancer, but she also plays the "Sitar and Tambura" exquisitely The music

lovers of the west are grateful to Ragini for her work of introducing and popularising something so beautiful of the life of Orient, and the people of India may well be proud of her achievement and devotion to her mission

THE SONGS OF RADHA

By SAROJINI NAIDU

I AT DUSK

Krishna Murari my radiant Lover
Cometh O comrades, haste
Bring vermeil and perfumes my limbs to cover,
Saffron and sandal-paste,
Bring shining garments for my adorning,
Blue of the dusk and rose of the morning,
Gold of the flaming noon,
Give me a breast band of gems that shimmer
Making the lamps of the stars grow dimmer,
Girdle and fillet of pearls whose glimmer
Shameth the *Shrawan* moon

Krishna Murari my radiant Lover
Cometh, O sisters, spread
Bud and ripe blossom his couch to cover,
Silver and coral red,
With garlands of green boughs the doorways darken...
Is that his flute call sisters hearken
Why tarrieth he so long?
Like pipul leave doth my shy heart shiver,
Like rippling waves do my faint limbs quiver
Softly, O Jamma love's sweet river,
Sing thou our bridal song.

II AT DAWN

All night my heart its lonely vigil kept
Listening for thee, O Love, all night I wept
Where went thy errant footsteps wandering,
Sweet Ghanashyam, my king?

My bridal veils are flung upon the floor
 My bridal garlands droop across the door,
 The buds that on my bed their fragrance spilt
 Grief scattered wine and wilt.

O Flute-player, how swiftly dost thou tire
 Of thine own gladness and thine own desire
 Couldst thou not find upon my yearning breast
 Thy rapture and thy rest?

Whose are the fingers that like amorous flocks
 Roam the ambrosial thickets of thy locks?
 Ah! whose the lips that smite with sudden drouth
 The garden of my mouth?

What shall it profit to revile or hate
 Thy fickleness, her beauty or my fate
 Or strive to tear with black and secret art
 Thine image from my heart?

Without thy loveliness my life is dead
 Love like a lamp with golden oils unfed
 Come back, come back from thy wild wandering
 Sweet Ghau-t-hu-un my king!

ZAGHLUL PASHA

By Prof. DIWAN CHAND SHARMA M.A.

POLITICAL workers have been divided into three classes—agitators, politicians, and statesmen. According to some, agitators come last in the scale, because their motives are sometimes questionable and their methods not always legitimate. Agitators love to disturb the waters and to exploit mass prejudices and they are, therefore said to be men who talk tall, and make much noise, but achieve nothing substantial. Politicians come a little higher in the scale than agitators (it might be remembered that, according to Lloyd George, a politician is a rarer being than a statesman). But even politicians are men of the moment. Their eye is always on the immediate present, and they do what is

useful and opportune for the time being only. It is, therefore, urged that they sometimes sacrifice the future to the present, that they change too often and have no fixed principles. Statesmen are the highest being amongst the political workers. They build up their nation without ignoring the past or the future.

Zaghlul Pasha was called a statesman by some, a politician by others, and an agitator by many. A man of tongue of gold, of pen, of fire and of an eye bright as the stars, he was thought to be an anti-British propagandist, and a kindler of mass prejudices by his enemies. Some charged him with inconsistencies also, inconsistencies which chequer

yield a better return. There is abundant scope for research with a view to increasing his efficiency in all farms where permanent

labour is employed. It is worth while doing it for is not the study of man the worthiest of all?

HINDU MUSIC AND DANCING IN AMERICA

(Illustration of Ragini Devi)

By MRS. TARAKNATH DAS

INDIA'S contribution to the cultural life of the world is immense. In religion philosophy the positive sciences, the influence of Hindu thought has been permanent, and today this fact is universally recognised.

Hindu influence in the fine arts—architecture, painting music etc.—is no less significant, although less recognised by the people of the west.

In the west, in the field of music and dancing a new era has come. On the one hand, a large number of restless people are seeking for a new road to newer sensation or sensualism, are exhibiting an unrestrained craze for so-called new music known as "Jazz", on the other hand, some serious students of music and dancing find in Hindu music and dance new inspiration, not sensual which stirs one's soul and leads to sublime ecstasy.

The music of the future will embody new ideas of harmony and melody—finer notes, intricate and subtle variations and improvisations which will exemplify the beauty of "Ragas" of Hindu music. Spiritual communion through music, enchanting life through music, soothing nerves and creating harmony and poise in everyday life through music, depicting deepest emotions of life, are a few phases of Hindu music, the divine art.

In all ages and among all peoples, dancing has played a significant part in the finer as well as coarser spheres of life. Religious dances, folk dances with all simplicity often give clearer interpretation of the mode of life of a people than written volumes. Hindu dancing in its varied phases is now attracting attention of many, who seek charm and beauty of human movements and expressions. Some time ago, Mme. Ruth St. Dennis introduced a few postures of Hindu dancing in her programme, and Mme. Pavlova lately in ballet productions incorporated something of Hindu dancing. However, Ragini Devi is the first one, so far as my knowledge goes, who has presented a comprehensive programme

the British Government if that could prove fruitful, boycotting it if that could make it climb down, accepting offices if by that he could ensure the progress of his country, and forming coalition with other parties if that could bring about peace in Egypt.

All this he achieved by the power of his personality and the force of his propaganda. He was a fellah, born of the soil, and he could read the Egyptians, it is said, like a book. His schooling in the village school, his education at the Elazhar University, his experience as a Government servant, his editorship of an official journal, his practice at the bar, all these things stood him in good stead as a leader of his countrymen. He knew his people well, and was as a nerve over which crept the unfelt oppressions of his countrymen. Thus he possessed an intimate knowledge of and an unbounded sympathy for his people. He had also vitality that could withstand the strain of political life. It is said that he had great energy and alertness, and was a man of action, through and through. In addition to his vitality he possessed great gifts as a writer and speaker. His writings were always inspiring, and roused in the hearts of the people of Egypt a burning love of freedom. But he shone more as a speaker. In debates none could be his equal, for he argued not only his own case but smashed also the arguments of his opponents. He possessed the great gifts of repartee and humour also, and these he

turned to the best advantage always in debates. He was however, incomparable on the platform. He could sway the multitude and kindle in all hearts the slumbering fires of patriotism. Above all, he was to the Egyptians the soul of nationalism, the focus of their national aspirations and the receiving centre of all their tales of oppression. He summed up for them in his person what Egyptian nationalism was.

But he did not rely solely on his personality to achieve his objects, he made use of a very extensive propaganda also for attaining freedom for his country. His own powers of writing and speaking were greatly helpful to him in this respect. But, above all, he relied upon the youth of his country to fulfil his national aspirations. His party had its branch organisation in every town and village of Egypt, and whatever he felt and thought himself he made his entire countrymen feel and think likewise.

Such was Zaghul Pasba, a man endowed with courage as well as judgment, with sympathy as well as imagination—a man who devoted all his good gifts to the service of his country. It was on account of this that he was called the uncrowned king of his country. Indian politicians may well take a lesson from him. Like him they should try to achieve their object by all legitimate means, without pinning themselves to any hard and fast political dogmas.

LATEST ON HINDU CITIZENSHIP

By SUDHINDRA BOSE

THE most recent development in the strenuous fight for Indian citizenship in the United States is that the Washington government has consented to validate citizenship of Indians naturalized before 1923. All legal proceedings, which have been started about five years ago to revoke their citizenship papers, have now been suspended. This action will enable some sixty odd Indians (generally referred to in the United States as Hindus) to maintain their legal status as

full fledged American citizens with all the rights of any other citizens.

It is to be noted that the United States government did not concede the Caucasian origin of the Indian people. They are not therefore entitled, like the natives of Europe, to American citizenship. The present ruling on behalf of sixty Indians, including the writer, establishes no precedent at all for other Indians to become citizens of the United States. India is still within the

the career of every politician. For his race, it was said that up to 1913 he was the opponent of the ex Khedive but as soon as the relations between Lord Kitchener and the Khedive became strained he took up the cause of the Khedive and succeeded in wrecking the Assembly. Similarly he supported the sale of the Suez Canal shares to England and the separation of Sudan and these two facts were always exploited by his enemies against him. According to others, Zaghlul Pasha was a statesman who wished to build up the fabric of Egyptian independence on whatever foundations the Egyptians had already laid.

It is needless to quarrel with people in determining whether Zaghlul Pasha was an agitator, a politician or a statesman. One thing is however certain that he was a great patriot who wanted complete independence for Egypt, and who suffered heavily on account of his flaming patriotism. But, be it remembered, that no suffering or criticism could shake his determination to make Egypt free. His enemies questioned his motives and his methods, they called him a turn coat and a demagogue without constructive ability, but these taunts could not make him change his course. There was a time when an Egyptian student tried to take his life because it was thought that he had become untrue to his own holy gospel of nationalism but even this did not embitter him. Nor did persecution inflicted upon him by the British Government weaken his fervour for Egyptian nationalism. A suspect almost all his life in the eyes of the British officials, he was twice deported to distant places on account of his political activities but even these deportations did not damp his ardour for the national cause. Thus he remained a patriot, true to the cause of Egypt from first to last.

All his life he spent in the service of Egypt, changing his methods of work from time to time though ever keeping his eye fixed on the goal of complete Egyptian independence. He used especially the three weapons of propaganda, boycott and negotiations in the attainment of his objects. A man of great political insight and extraordinary judgment as he was he did not pin himself down to one method but did always what the moment demanded. He started his political career during Arabi Pasha's rising in 1882. At that time he fought against the British, but soon he made peace with them

and became the most intimate adviser of Lord Cromer who said about him in a farewell speech:

Lastly gentlemen I should like to mention the name of one with whom I have only recently co-operated but for whom in that short time I have learned to entertain a high regard. Unless I am much mistaken a career of great public usefulness lies before the present Minister of Education Saad Zaghlul Pasha. He has all the qualities necessary to serve his country. He is honest, he is capable he has been abused by many of the less worthy of his own countrymen. These are high qualifications. He should go far."

And he did go far as all the world knows. He accepted offices—he was the Minister of Education, the Deputy President, the President of the Assembly, and the Prime-Minister by turns, not with a view to exalt and glorify himself in the eyes of his countrymen, but to serve them. He, however, did not set much store by any one thing. He accepted an office when it served the interests of his country, but he boycotted it next time when he thought that his country would gain by that. When Milner Commission was sent to Egypt he sent a note from France to his countrymen that they should boycott it. And his countrymen did not co-operate with it till the British Government had recognised the independence of Egypt. But if he was not wedded to the principle of accepting offices, he was not also a hot-gospeller of indiscriminate boycott. He was ready to enter into negotiations with the British Government whenever the time was opportune for that. For instance he wanted to lay Egypt's case before the Paris Peace Conference, and if this proposal did not mature it was no fault of his. He again went to London to negotiate with Mr Ramsay MacDonald the Labour Premier. At that time he formulated the five demands which are the bedrock of Egyptian nationalism. He wanted the withdrawal of all British forces from Egyptian territory, the withdrawal likewise of the Financial and Judicial Advisers, the disappearance of all British control over the Egyptian Government especially with regard to their foreign policy, and the abandonment by the British Government of its claim to protect foreigners and minorities in Egypt. He urged also that British protection should be withdrawn from the Suez Canal. All this clearly shows that without taking his eye off the ultimate goal Zaghlul Pasha always did what was best under the circumstances, negotiating with

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies errors of fact clearly erroneous views misrepresentations, etc. in the original contributions and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject this section is not meant for the airing of such differences of opinion. As owing to the kindness of our numerous contributors we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor The Modern Review.]

Calcutta University Innocents Abroad

In your last issue you referred to the unholy alliance formed by the Mukherji-Banerji clique in the Calcutta University and the Swaraj party to vilify misrepresent and hamper Prof. Jadunath Sarkar the Vice-Chancellor in his attempt to introduce the much needed and long delayed reform of that institution. It is being alleged by the organ of this party that Prof. Sarkar before his accession to the Vice-Chancellorship had condemned all the Professors of the Calcutta University in the *Modern Review*. A reference to your back numbers will show that he has never written a word of wholesale or indiscriminate condemnation but only protested against the rewarding of the sham research of some of the deliberate manipulation of examination results from personal considerations and the slavist spirit in certain teachers and examiners which has brought about this deplorable state of things and made Calcutta first classes of the Sir Ashutosh Mukherji brand the laughing stock of India. Can Prof. Sarkar's statement be refuted on a question of fact? The latest example which I give below is conclusive.

Mr. Syama prasad Mukherji, at the Calcutta University created a record of unrivalled brilliancy. He was declared 1st class 1st in I.A., I.A. M.A. and B.L. 1924 and awarded all possible medals and prizes. This super graduate of the Calcutta University then went to England and studied for the Bar Examination. At Calcutta he had been 1st class 1st at every one of the three Law examinations. What was his achievement in London?

In the (19.6) Bar examinations in Hindu Law, he was not first class nor second class but third class. (There is no fourth class in London.) But his English record was made in *Criminal Law* in which he failed altogether. It should be here pointed out that Mr. Syama prasad Mukherji has been for three years a lecturer at the Calcutta University's Law College, and the special subject which he teaches others, as an expert, is *Criminal Law*!

Among your readers there are graduates of the Universities of many different countries. I ask them could Mr. Syama prasad's brilliant Calcutta Career have been possible at Oxford or Cambridge or at some place nearer Constantinople?

It need scarcely be added that Mr. Syama prasad is a son of Sir Ashutosh Mukherji long Vice-Chancellor of the Calcutta University and that

he has been called to the Bar in his second shot

in Outlook

Teachers of Anthropology in the Calcutta University

I crave the hospitality of the columns of your esteemed journal for giving publicity to the following facts regarding the scandals of the last Graduate classes in Anthropology of the Calcutta University.

Mr. X is a lecturer in Anthropology who has got no training in Anthropology theoretical or practical. As regards his method of teaching he is a slave to his patent exercise books, which are nothing but mere verbatim copies (with very slight alterations in some cases) from Parker Haswell's Zoology, Cunningham's Anatomy and Bostes' Fossil Man as shown below.

The following are a few extracts from his lectures—

At an early stage of development the cerebral vesicles are enclosed in a membranous covering derived from the mesoderm surrounding the notochord. This differentiated mesodermal layer is called the primordial membranous cranium etc. Vide Cunningham's Anatomy p 186 5th edition

In the Ascidian the heart is a simple muscular sac situated near the stomach in the pericardium. Its mode of pulsation is very remarkable. The contractions are of a peristaltic character and follows one another from the end of the heart to the other for a certain time then follows a short pause and when the contractions begin again they have the opposite direction. Thus the direction of the current of blood through the heart is reversed at regular intervals. etc. Vide Parker Haswell's Text book of Zoology 3rd Edition 1911 Vol. II, P 18

The skeleton of all fins—paired and unpaired—presents a considerable degree of uniformity. The main part of the expanse of the fin is supported by a series of flattened segmented rods, the pterygophores or cartilaginous rays, which lie in close apposition at the outer ends of these are "etc. op cit From page 140 and onwards

The cranium is a cartilaginous case the wall of which is cartilaginous throughout. At the

"barred zone", and no Indians in future will be allowed to be naturalized in this country worse than that. The Commissioner of Naturalization has written to me from Washington saying that the cases of Indians whose naturalizations already had been cancelled are in no wise affected by the recent favorable action of the government. In other words only those who kept up their legal fight for the last five years and carried on their cases to higher courts will be permitted to retain their citizenship.

As a matter of fact, there was actually no final court decision confirming the naturalization of the Indians. What really happened was this: The Department of Labor submitted recommendations to the United States Attorney General to the effect that pending suits to cancel naturalizations of certain Indians be discontinued. The Attorney General, in accordance with the recommendations, issued instructions to drop those cases. Their dismissal was a result of the recommendation of the Department of Labor. It handled the matter with the Attorney-General by routine correspondence. There was therefore no new court decision on the eligibility of Indians for American citizenship.

My learned barrister, Honorable Mr. J. P. Shoup, informs me that the United States government decided to withdraw the pending suits because it had ample opportunity to correct the mistake of law or fact at the time the naturalization court granted us the citizenship papers. The government could then appeal, if it wished, from the judgement of the naturalization court to higher courts. The United States is not entitled now, after the lapse of all these years, to cancellation of the naturalization papers. Because of the lapse of time it does not constitute what the jurists call a *res judicata* an equitable issue which may be decided by a court of competent jurisdiction.

In the meanwhile, scores of Indians who neglected to contest the naturalization suits will remain in stateless condition. They are men without a country. Most of these unhappy people are farmers on the Pacific Coast. They have made, according to most

impartial observers, an important contribution to the economic life of the country in developing cultivation of cotton in the Imperial Valley. But now as they are ineligible for citizenship, they are under California law ineligible to hold or lease land. Reported *The New Republic*—

"They were enabled to remain on the farms, which they had developed on what was thought to be sterile and arid land only by virtue of transferring title or lease hold to American citizens, by whom they were mulcted of the fruits of their industry, and in some cases reduced to peonage."

Here is an instance of cruel economic exploitation of a group of extraordinarily able farmers and artisans, because they are debarred from citizenship.

California does not propose to stop with this. It is now being planned in California that even children of those ineligible for citizenship, born in the United States, should also be ineligible for citizenship. This will be in flat contradiction to the Fourteenth Amendment of the Constitution which says "that all persons born in the United States are citizens of the United States and the State in which they reside."

Let it be remembered that when United States entered the Great War, it instituted the draft. All Indian immigrants were promised by the American Government that if they would obey the draft peacefully, and serve this country in the war they would be granted citizenship. The Indians responded loyally to this appeal. They furnished their draft quota. Some were wounded in battle. A few even gave their lives to the land of their adoption. But the United States never kept its promise of citizenship—the promise which was sealed by the sufferings and the blood of our Indian brothers.

Naturally all discussion of American citizenship for Indians has by no means adjoined. "Whether or not the Hindu is a Caucasian is beside the point", said an editorial in the *Nation* (New York), "he has proved to be a good citizen."

State University of Iowa,
Iowa City, U.S.A.

Editor's Note

The writer of this communication mentioned the names of all the post-graduate teachers in full but we have omitted them. If for convenience of investigation the University authorities concerned wish to know them the information will be placed at their disposal.

Editor M R

Recent Hindi Literature

Mr. H. Chandra Joshi has spasmodically tried to accomplish the wonderful feat of giving a complete account of the recent Hindi literature, together with an exhibition of his familiarity with such writers as Goethe, Tolstoy, Roman Rolland and Rabindranath Tagore in five columns of the August issue of the *Modern Review*. Scientific analysis, which has become the characteristic of criticism in our times and which has asserted once for all that the first duty of a critic is not to judge but to understand, seems to be unknown to the critic since it is nowhere noted in his amazing and sensational piece of critique. There is not a single poet, a single novelist, a single dramatist, a single critic or a single editor in the whole of the recent Hindi literature who might prove himself to be worthy of the name in a test by our critic or who might be rewarded by him with the acknowledgment of the greatness essential for every man of letters. In a sudden flush of enthusiasm he declares that owing to this very spirit of nationalism the critics and writers of Hindi literature have been deceiving themselves for sometimes past by believing that Modern Hindi literature is in no way inferior to any other literature of India, if not of the whole world. This self-deceptive, envious and suicidal belief is so strongly current throughout the Hindi reading public that if any body ventures to disprove the fact, he is supposed to be a heretic, a kafir, a traitor to the cause of his mother tongue. Oaths and abuses are hurled upon him from all sides and he is left terror-stricken like a man standing amidst a furious and enraged mob. What he says here needs no argument for its contradiction. The very terminology of the expression makes it obviously clear. As if the whole Hindi speaking world is in a state of disorder and chaos as if we are not conscious of the different social, political and scientific forces that are at work as if our national interest is not identical with the interest of Bengal, Madras, Maharashtra and Gujarat as if the Hindi speaking public constitutes a nation all its own. No sane man in our literature has ever claimed that our literature is as rich as some other literatures in the recent times. Many of the presidents of the all India Hindi Sahitya Sammelan have humbly admitted the fact that there have been many short-comings in our literature in recent times unknown to the other contemporary Indian literatures and have urged and stimulated our writers to bring our literature to the level of the other literatures. In the course of his criticism upon Premashram, he writes to our great surprise, this very work of fiction has made our men of letters realise for the first time the greatness of our literature. Had not Mr. Premchand composed this work of fiction we

could have never thought of the greatness of our literature. What a farce? The greatness of a literature depends much more upon its classics and the classical Hindi literature with the colossal figures of Tulsi, Sur and Kabir and many other poets of the first rank is the richest undoubtedly, of all the other contemporary literature, of India.

All the greatest artists of the world have always tried to solve the problem of humanity in their works, this is the source of every vital creation according to the critic and for the support of this deliberate thought, he quotes Goethe, Schiller and Roman Rolland. But before we can bring it into focus, we must ascertain how art is created. Is it created deliberately upon some well-directed plan or is it the unconscious expression of the human soul? If only we invite psychology to our aid it will become obvious that the emergence of artistic beauty which is nothing else but a consummate expression of the human spirit is one of the most unconscious manifestations of the human mind. Thus to say that art is created to solve the problem whether of humanity or of a man is unscientific. Mr. Joshi further adds, "but our critics and men of letters do not want to see the truth and they have shut their eyes to the light. Popularity and not truth is their sole criterion. We would have let them remain undisturbed in their paradise. But they have corrupted and vitiated the taste of the public and have made its aesthetic sense and faculty of appreciating art quite blight. The critics of the Hindi world of letters have led the public to believe that the works of Tagore and of Gorki are nothing but a means of social or political propaganda. The public has been misled by the false criticism of these critics and takes every word spoken by them to be true." We are not aware where such a state of things exists in the Hindi world and who are those critics who have tried to misrepresent the glorious writers like Rabindranath and Gorki. We would advise the critic to be responsible to himself and not to create a monstrous medley.

Assisted by a quotation from Shakespeare he asserts that a writer in the habit of touching upon the social and political problems, eventually comes down from the rank of a superb artist. If this were the criterion even Shakespeare would not stand the test. He has frequently touched upon these problems. Even Tolstoy, Roman Rolland and Rabindranath could not do away with them. Tolstoy failed in literature and succeeded in politics. He is most himself when he is revealing the horrible underside of civilization, the incompetency of the state, the futility of western life and the menace of Imperialism.

In the last and concluding paragraph of his article Mr. Joshi says, "There are many small circles in the Hindi world of letters of the day and each circle has its own foolish conventions in the matter of art. Darkness reigns there supreme. Nobody wants to see the light and every literary man desires to live in a fool's paradise. What does it all mean? In this age of universal enlightenment our writers (in spite of the cultural heritage behind them) desire to live in a fool's paradise."

Nowhere is the error of Mr. Joshi more conspicuous than in the case of his estimate of the period of the recent Hindi literature. He is absolutely wrong in his decision for the writers

mann do not genuine indignation but just a dirty political game.

He could of course add the Jews to the list. But what a school boys argument he has used! It seems as if he thinks Indians are trying to prove that the English people are a Memphis 'opie can crowd. This is not true. Our quarrel is not with individual Jews and Irish and Welsh and Li termann—as Mr Thompson seems to think, but with the system of British rule in which the English and many Indians are lost tools.

Again he asserts on the one hand "that there is magnificent outspokenness in England—about Armenia, but never about Abyssinia or India and in the United States—about everything except what happens in their own borders. Hammar the hero in "An Indian Day is, however cheered for his courage in giving the accused Indians in a conspiracy case only eight years imprisonment while in reality for four years there have been more than 200 men in prison without charge or trial in Bengal under the Ordinance and *strangely* even all many such political prisoners at infectious diseases in prison after a few weeks or months in prison while ordinary prisoners real criminals do not seem to suffer from such complaints. What is that? Shall we assume that the Professor of Bengali at the ancient university of Oxford does not know of these atrocities or shall we sing halalulah to the Thompsons scientific mind?

The purpose of this book seems to be propaganda for the Empire and Christianity. For the former end he tries the confident trick and might miss it. For the latter who do not know enough about India—and unfortunately there are many of his readers who come under that category—and for the latter he has to put his last shirt on his own horse. As the editor of the *Daily Mail* finds in Russia the last link of evil so does Rev Thompson find in Christianity the library of all Good. It is a question of faith and we will leave it at that.

A few words are necessary about the Indian Day as a work of art. Coming after the brilliant book of Forster's "A Passage to India" it makes a very gloomy picture. The contrast is painfully evident, and one cannot help pitying one against the other. Forster is essentially an artist. His picture of the Anglo-Indians community as he knew it, and he described the Indian community as he saw it. His characters are human beings of flesh and blood and life has no axe to grind. Mr Thompson on the other hand has written an apology for the Anglo-Indian community. It seems that Forster's book was painful (painful because true) and Anglo-Indians needed to avenge their honour. It is because Thompson has this end in view that his book is so weak. His characters so artificial. There is not one Anglo-Indian character from the Tommy to the Priest who is not in some way or other a lamb of Christ. If they err at all it is seldom and temporary and their error is expiated and just find. They all are decorated with virtues one surpassing the other. Even the hero—Hilda the English girl who is eternally riding and who is the background of the novel appears like a Mogul painting a lady on a horse and is made to pull her reins and make a speech on woman suffrage and later forced to lead a life of sacrifice for the Indians of course—all of the valley used as manure.

The Indian characters are superficial. There is no depth and there is no study. But what is characteristic is that some of their virtues are English. "You are a Sikh (not a gentleman the English) is the compliment paid by Hammar the hero to Nandji who is an Indian soving the Raj and most great odds. Even virtues are nationalized. The writer says in his preface

"No living person is sketched in this story and if anyone in India feels his name in it he must please accept my assurance that it is because never heard of him.

That is a pity. One wishes that Thompson had not painted his characters in patches when he accumulates all good on one side and says let there be light, and calls it an Anglo-Indian community then he is not giving us enough for our seven and six.

It is a great tragedy but natural that political domination of one nation over another should so deteriorate art. It affects both the dominating and the subject nation. The former dare not tell the truth lest its imperialistic prestige suffer and the latter is often prevented from admitting their weaknesses lest they be used against it for further imperial exploitation. It is not surprising therefore that so few Indian writers can write anything about modern India which is but little more than trash. If an Indian day outlives Thompson, then Mr Thompson may be proud of the miracle—it is hardly likely.

BAKAR ALI KHAN

DAWS OF NRI JAMA By Brajendra Nath Banerji with a Foreword by Sir Feroz Cotton Pp. 111+126 (M. C. Sarkar & Sons Calcutta) Rs. 2

This well printed but slender volume contains three historical papers on the Nanayana missions in Bengal (so well known to readers of Gleig's *Life of Warren Hastings* and Bankim Chandra's masterly novel *Anand Math*) Pandit Jagnnath Sarkar has been at the College of Fort William founded by the Marquis of Wellesley. All of them are based upon State records and it is only in respect of the third that Mr Banerji has been anticipated—by Col Ranking in *The Past and the Present*. But its story needed retelling in a condensed and popular form and this Mr Banerji has done here.

We are familiar—often to the point of nausea—with the tale of British lattes and annexations which fill our current text books of Indian history. But the cultural developments and the victories of peace which are the more glorious enduring monuments of British rule in this alien land have not received due attention from what free man used to call the drum and trumpet school of history. It is good that Mr Banerji has made a beginning in this much to be desired line even on a small scale. All his papers are readable and contain many fresh facts.

J. S.

BHUKT SIVGA By Frank R. Sell Macmillan 2 Rs. net

The Romance of Rajasthan is of personal interest to the student of literature and we are not surprised that Prof. F. R. Sell of the Mysore University has been attracted to the subject and has succeeded in writing a novel embodying some

whom he considers to be the writers of recent Hindi literature do not belong to this period they belong essentially to the period of Transition. The spirit that animates the writings of Ajodhya Singh of Mathura Sharan to a certain extent even of French and of all their other contemporary poets and novelists is the spirit of the nineteenth century Hindi poetry and fiction. They are not the real representatives of this age. Almost all their creative inspiration owes its origin to a date prior to the last evening of the last century. Their influence is very little felt to day. Though they have still continued writing but their influence is as faint, as was Victor Hugo's in his old age before the new School of Flaubert and other French writers of the age of criticism. The new generation of writers that has risen to eminence has achieved wonders as decisively as even in the history of literature. It has revolutionised Hindi poetry and stimulated Hindi prose. This spirit of change and progress declared itself in the writings of Jaya Shankar Prasad. Besides many historical plays and stories of intrinsic merit he has recently produced two works of immense importance forming landmark marks in recent Hindi literature and bearing distinct testimony as to what a perfect art should be. One of these is a volume of poetry *Asru or Tears*. The other is a symbolic play *hamana*.

Nowhere did this spirit manifest itself more strangely than in the poems of Makhana Lal a politician of the first rank a real hero of the national cause.

With the advent of Surya Kant Tripathi and Sumitra Nandan Pant the age enters upon a new phase. Every tradition and rule is thrown into the background. Individual craving is incarnated

and it is asserted once for all that a poem is the outcome of a great agitation in the human breast and hence it is subject to no hindrances. Naturally they had to face great opposition but the more acute has been the opposition the more they have gained ground. Their poems have been the consummation of the modern conception of verse. One of the greatest achievements of Surya Kant of Sumitra Nandan and of almost all of their contemporaries. Bai Krishna Sharma, Ram Nath Lal, Mohan Lal Mahin Janardan Prasad Jha and many other writers operating in common for the accomplishment of the same goal has been that they have tried not only to create new wine but they have created new bottles too. They realised clearly that the wine which they were going to create would not appeal to the general taste if put into the old bottles and curiously the opposition that has tried its level best to embarrass the new movement for years together did not centre around the wine but around the bottle. Such are the general outlines of this period. As to the detailed and elaborate analysis of the poetic movement we must wait.

No less than in poetry has the spirit of progress and reform shown itself in the sphere of prose literature. We have many writers of considerable worth and distinct merit writing in the fields of criticism and fiction deserving high places in the hierarchy of writers. Though our recent literature has no writer of the magnitude of a Goethe or a Tolstoy or a Rabindranath or of a Romain Rolland yet there is no reason for the sentimental despair which he has shown in his criticism, since there is a considerable number of writers both in prose and poetry who can keep alive in us a real appreciation of beauty.

ENGLISH

AN INDIAN DAY. By Edward Thompson. Published by Alfred A. Knopf. 306 pages. Price 7/6.

Mr. Thompson has come out with another book—this time a novel—on India. He deals with the attitude and the work of the Anglo-Indian community and the Indian characters drawn by him are used merely as a relief and are of secondary importance. He also takes the opportunity of impressing on the reader that British rule is good for the Indians and that what is required is just a few changes here and there. Mr. Thompson is a clergyman trying to be a Socialist but ever miserably failing yet ever believing that he is

one. He will not look Truth straight in the face regardless of consequences either to his country or to India but he will instead see the truth but partially even admitting a few grievances of the Indians then ratting himself on the back for his open-mindedness and scientific spirit concludes his arguments according to his wishes and not according to facts.

Mr. Thompson tries the clever trick of eating his cake and at the same time having it. A character in the book for instance bitterly complains in the following words:

I sometimes think that your (meaning the Indians) cursing the United English nation for what our Scots and Irish and Welsh and Ulster

of the best traditions of Rajput chivalry. It is a romance of the Moghul period dealing with the obstinate campaigns of Aurangzeb against the Rajputs and his final discomfiture. Besides the invention of some imaginary characters to fill up the details of the story, Prof Sell has not deviated from the facts of history and *Blum Singh* is thus as valuable to the serious student of Indian history as it is to the lover of romance. We should consider it an extremely suitable text book for students in our Universities who are usually deprived of the chance of reading about their own national heroes and are expected to enthuse over the achievements of men of foreign lands. Rajput history embraces some of the most inspiring episodes of the past and Prof Sell has laid the younger generation under a deep debt of gratitude by this introduction to a fascinating world of love and war.

P. SESHADRI

HAND-BOOK OF INDIAN UNIVERSITIES Printed at the Bangalore Press Bangalore. Pp 351 Price Rs 2

This is a very useful publication giving the essential details of sixteen universities of India and Burma in a handy volume. The Inter University Board, ever since its inception at the Indian Universities Conference at Simla (May 1924) and its first sitting at Bombay (March 1926) have been doing a quiet yet sound work of rearing a platform where the various universities of Modern India may discuss their respective problems academic or otherwise and try to compare and co-ordinate their activities with a view to permanent service to the country. Separatism is still the law of our existence so far as university administration is concerned. But a day will come when academic megalomania of particular universities will give place to a sense of general economy of academic resources leading to the stoppage of useless duplication. Then only we may aspire to profit by a real concentration of our attention to the special aptitudes of individual universities as determined by regional needs and developed by the cultural environments of each. Then the hand book of Inter University Board would pass from the stage of being a mere book of informations to a sound and fruitful survey of the interesting experiments made in the respective cultural laboratories of India. That day seems unfortunately to be far off. Because vested interest, cliques, personal influence and slave mentality are too pronounced to allow a healthy development along the path of national welfare. But we hope that the line of activity indicated by the Board will help our universities to shake off their mediaevalism and emerge as independent and at the same time useful and responsible collaborators in the cause of national as well as international illumination.

We congratulate Sir Venkataratnam Naidu the President of the Board for boldly facing these problems and we recommend the book to all serious educationists of modern India. The printing is neat and the price of the book is very reasonable.

KANTILYA A CRITICAL AND HISTORICAL STUDY
By Narayan Chandra Bandyopadhyaya M.A.

Published by R. Cambay & Co, Calcutta Pp 118 Price Rs 7 8

Kantilya has been characterised by the author as the foremost political thinker of Ancient Hindu India and he has devoted this study to the elucidation of the social and political ideals reflected in the pages of the *Arthashastra*. Mr Banerjee's method is highly commendable. Rejecting the precarious path of vague theorising, he limits himself to the task of analysing faithfully the positive contents of Kantilya's book on Polity. He rejects naturally the false analogies from western experiments in polity, disputes the readings of 'State Socialism' (pp 287) and thoroughly limited monarchy (pp 128) advanced by the patriotic school of writers. He candidly confesses like a true student of history that the text does not prove any legal obligation on the part of the King to obey the mandate of the majority. He significantly characterises Hindu Government as 'Paternalism' which found its greatest and noblest incarnation in the Emperor Dharmasoka proclaiming *samam evam jagata mama*. The whole mankind is my children. The Kantilyan King is the natural guardian and saviour of the whole community irrespective of caste or creed (Cf pp 285-86). "The Government favoured neither the priesthood nor the capitalist nor was overawed by the pretensions of the labouring sections, Kantilya acknowledges the right of the daughter to inherit property both real and personal and that of the mother to her *stridhana* (pp 270-76). The orphan and the widows the poor and the aged were under the paternal care of the Kantilyan King. Lastly though a Brahmin and a conservative by training and tradition as Mr Banerjee has said it was reserved for him (Kantilya) to advocate the emancipation of the slave and the admission of the aborigines to royal protection." The *Sodra* was regarded as a member of the *Arya* Community and while his contemporary Aristotle was justifying nay vindicating slavery Kantilya was the earliest to pronounce an *Arya* can never be a slave and held that infamous custom as one which might exist only among the Barbarians (p 47).

So the basis of Kantilyan polity was broader than what was expected (or suspected) by the western critics of oriental despotism and Mr Banerjee has rendered a signal service to the cause of correct appraisement of Indian culture history. This book would serve as an excellent introduction to the study of the institutional history of India both in its structural and functional aspects. The original Sanskrit texts that he quotes copiously add to the documentary value of the work specially with reference to future research by advanced students. The printing is neat and the price moderate. We recommend the book to the public.

HISTORY OF RUSSIA By S. I. Platonov
Macmillan and Co Pp 430 Price 14s net

Prof Platonov who surveys the history of Russia in the present volume from the formation of the State of Kievan to the extinction of Tsarism from the status of the grandson of a serf rose to be the private tutor to the grandchildren of Alexander II the Emancipator (1855-1881). Being a commoner Mr Platonov has surveyed the history of his

in the United States. The *Contents* include these twelve headings: Introduction. What is the American Constitution? The Election of the President. Accidental Presidents. Third Presidential Terms. The President's Cabinet. The Cabinet and the Congress. Appointment and Removal. The Power of the Purse. The Resident Congressman. Miscellaneous Usages. Changes in the Constitutional Usages. The Safeguards of the American Constitution.

A. V. Dicey writing on the English Constitution (Introduction to the Study of the Law of the Constitution, P. 2nd ed. 1915), analyses it under two main headings.—The Law of the Constitution. The Conventions of the Constitutions. These latter are the customs, practices, maxims or precepts which are not enforced by the courts. As examples of the Conventions of the Constitution (English) these two maxims be given here—The King must assent to any bill passed by the two Houses of Parliament or Ministers resign office when they have ceased to command the confidence of the House of Commons. These are not laws in the true sense of the word for if broken no court would take notice of their violation. What Mr. Hornum is concerned in his book is the treatment of such unwritten laws in the Constitution of U.S.A. Naturally we shall expect a very interesting book. Chapters 2 and 4 serve as especially interesting. The general public will be interested to hear that one of the principal aims of the founders of the American Republic was to make the New World safe against democracy (P. 26—the italics is mine). The method of electing the President (p. 28 '99) is rather thought-provoking especially in these days of Communism. Socialism or mob rule. Chapter 4 on Third Presidential is illuminating in the light of what is at present happening in U.S.A. Mr. Coolidge has just refused to seek his third term. And why? Gamaliel Bradford, that noted literary critic of United States referring to Cleveland's refusal to accept the third nomination referred to it as the popular prejudice which has almost reached the point of superstition against a third term for any President. Why Cleveland alone? George Washington, Jefferson, Jackson, Grant, Roosevelt all of them refused the third presidential terms. And now comes Coolidge? A typical Britisher the author is especially hard on the 18th Amendment of the American Constitution. He thinks the Amendment which enforced the Prohibition law in U.S.A. is unconstitutional and wrong.

A well written book the general public ought to like it even if it was meant for the English public. Apart from sweeping generalisations at places the book does not betray much of partisanship. And one such sweeping assertion is found on page 242 where he makes all American citizens as believers in ethical fundamentalism that this is a false estimate must be asserted by those who have studied the trends of thought in America during the last fifteen or twenty years.

EVOLUTION AND CREATION. By Sir Oliver Lodge published by Hodder and Stoughton London 1926 6 Shillings net.

Apart from such technical books as *Fiber and Reality*, *Electrons, Atoms and Rays*, Sir Oliver has written such religious scientific books as *The Making of Man*, *Reason and Belief* or the

Substance of Faith. Therefore in publishing this present volume (Pp 164) the author has not gone beyond his range.

Contents—Eight chapters excluding the Preface and Prologue.—The chapters are on Evolution in general. Creation or Origins. General reasoning about existence. Cosmic Speculation. Evolution of Plants and Animals. Evolution of Man. Perfection of Man (Conclusion & Epilogue Worth of Humanity).

Some of these chapters embody the general sense of Huxley lecture delivered by the author at Charing Cross Hospital (December 1925) and likewise some midday talks on Evolution at Christ Church Westminster in the same month. The general idea represented in the conclusion to Chapter 8 about the main drift of the Bible as a whole, is mainly due to the artist son of the author though the latter is responsible for adopting it. That this adoption has weakened the book scientifically will be seen presently.

Says the author (P. 15) My thesis is that there is no opposition between Creation and Evolution. One is the method of the other. They are not two processes—they are one—a gradual one which can be partially and reverently followed by the human mind. He says further (P. 11) *Creation* signifies the process by which all observed things—what we call natural phenomena—have come into being and it is a process which in many of its aspects mankind has become able to follow in some detail. We find that it is conducted in a spirit of law and order by a gradual process of evolution—a process of becoming and unfolding.

Printed in bold types and in good paper and priced rather moderately the book is accessible to all interested in the subject. There is one disappointment in the book however. At places the present publication is not quite critical. Says the author (P. 163) whilst talking on the worth of humanity—And ultimately God so loved the world that He gave the Being we are taught to call his *Only Son* to live on the planet, and to undergo the rejection, the torture and the death which was in store for a Being higher than the sons of men could understand (the italics is mine). Here Sir Oliver seems to be in his devotional mood, not certainly in his critical attitude. We have already mentioned that Chapter 8 on the Perfecting of man betrays a certain weakness in the book. In the conclusion at the end of the chapter says the author (P. 159).

(There are) two main stages in man's evolution. First came the knowledge of good and evil the sense of sin the power of judging—the sense of transgression the sense of law. Thereafter man was prone to judge not only his own actions but those of his fellows an era of criticism and self-righteous judgment set in and continued through some terrible millennia of wrongdoing and backsliding as narrated in the Old Testament. First then the reign of human law and judgment. Then came a strange innovation a new dispensation replacing the old code of conduct by a spirit of human kindness, charity, service and brotherly love (P. 151). This gradation in the ethical consciousness of man may be in keeping with the evolutionary idea but is certainly not historically correct. All students of ethnology know that the sense of individual discrimination is a later development and not an early one. The trouble

and thought depend on the instrument of language. Most intimate and expressive of all languages is our mother tongue. But our mother tongue whatever it may be does not suffice for all we want to hear and read and say. Even if we are born into the inheritance of a mother tongue which has the wide currency of a world language we need sufficient command of another language in order that we may have the key to what otherwise is locked against us and in order that we may more fully understand the meaning and value of words in the passage of thought and sympathy. If on the other hand, our patrimony is one of the little languages spoken relatively by few we need to master as our second language one of those which are passports.

Mr. Michael West aims at making easier for the multitude of men and women this travel and traffic of the mind. We endorse Sir Michael's opinion.

In this important and somewhat technical educational work Mr. West discusses the nature and origins of the problems of bilingualism the history of the policy of bilingualism in Bengal, bilingualism and national culture, the advantages and disadvantages of bilingualism in the educational system of Bengal, the Bengali's need of English, the silent reading ability in English of Bengali students, the problem of the improvement of silent reading ability in English in Bengali students, the English vocabulary of a Bengali boy and the teaching of English reading to Bengali boys.

A DICTIONARY OF MODERN ENGLISH USAGE. By H. W. Fowler joint author of *The King's English*, *The Concise Oxford Dictionary* and *The Pocket Oxford Dictionary*, Oxford. At the Clarendon Press, London. Humphrey Milford. Price 7s 6d net. Pp. 742. Cloth.

This useful book of reference is very clearly printed and is very good value for its price.

MORLEY'S LIFE OF GLADSTONE. Popular Edition. abridged. 392 pages. Fully illustrated. 5s net. Hodder and Stoughton, London, E.C. 4.

This popular abridged edition of the great biography of a great statesman will be welcome to those who cannot afford to buy the original unabridged work as well as to those who have not the leisure to go through big voluminous works. This edition has several new features. The abridgement was placed by the family of Mr. W. E. Gladstone in the hands of the Rt. Hon. C. L. G. Masterman himself, one of the most brilliant of Liberal politicians and writers. Mr. Masterman has written a full and very important preface to this edition. It not only omits nothing of importance from the original edition but contains many valuable features included neither in the original nor in any previous popular edition.

Those of our countrymen who desire to give themselves some education in politics should read this work though in one important respect the life of Gladstone must be a fresh reminder of what little interest even the greatest of British statesmen take in the affairs of India which has been chiefly instrumental in making the British Empire what it is. In this biography

of Gladstone the only reference to India is in connection with the reversal of the policy of the Tory government in respect of the north-west frontier of India. And yet Britishers pretend to be our "trustees"!

R. C.

INDIAN CURRENCY REFORM. By Prof. B. N. Naran. Messrs. Shamsher Singh and Co., Katchery Road, Lahore, 1926.

This booklet contains a review of the report of the Hilton Young Commission on Indian Currency and Finance (1926). It was written at a time when the question of stabilization of exchange was agitating public mind and his conclusions well repay perusal. Our author has done well by exposing some instances of plagiarism by the authors of the Currency Commission. He has quoted several passages to show that in the body of the report "whole passages were taken word for word without acknowledgment from the evidence of certain witnesses without any examination or analysis of the opinions, estimates or arguments of the witnesses concerned."

MONEY REFORM IN INDIA. By A. Ramziya G. A. Aaleman and Co. Madras, 1926.

In this little book the author deals with some of the main aspects of Indian Currency and Exchange and suggests lines on which currency and exchange reforms should be effected. Our author has endeavoured in this booklet to point out the real defects of the existing monetary system in India and indicated some methods of removing them. His suggestions are worthy of consideration.

INDIAN ECONOMICS IN A NUTSHELL. Edited by Tarapada Das Gupta and Hemanta Kumar Sen. R. Cambay and Co. Calcutta, 1927.

This book is an welcome addition in the field of Indian Economic literature. The late Messrs. Kanade and Dadhaboy Naoraj and R. C. Datt were pioneers in this field and they were followed by Professors Kale, Jadunath Sarkar, Dr. Pramathanath Bhanjoo and Harisadhan Chatterjee. The book under notice contains up-to-date information regarding the current economic problems such as currency and Banking, the Khadi Movement, the Imperial Bank Act of 1920 etc. and will be a confident serve as an excellent handbook to students going in for B. A. or B. Com. degrees. The printing and get up leave much to be desired.

H. S.

THE USAGES OF THE AMERICAN CONSTITUTION. By H. W. Horrell. published by the Oxford University Press (1925). Pp. IX, 251. Price 10/6s.

Says the author in the Preface—Yet, however accurate and comprehensive Lord Brice's study (*American Commonwealth*) may have been it did not cover the whole ground in adequate detail. The subject of the present volume although full of interest to English and American readers alike occupies only a few pages of the *American Commonwealth*. The book has been written primarily for an English public (the author is himself an Englishman). The present volume is not the product of academic reflection at a distance. The author has spent more than six years, in all,

in the United States. The *Contents* include these twelve headings: Introduction. What is the American Constitution? The Election of the President. Accidental Presidents. Third Presidential Terms. The President's Cabinet. The Cabinet and the Congress. Appointment and Removal. The Power of the Purse. The Resident Congressman. Miscellaneous Usages. Changes in the Constitutional Usages. The Safeguards of the American Constitution.

A. V. Dicey writing on the English Constitution (Introduction to the Study of the Law of the Constitution, P. 2nd ed. 1915) analyses it under two main headings—The Law of the Constitution. The Conventions of the Constitutions. These latter are the customs, practices, maxims or precepts which are not enforced by the courts. As examples of the Conventions of the Constitution (English) these two maxims be given here—The King must assent to any bill passed by the two Houses of Parliament or Ministers resign office when they have ceased to command the confidence of the House of Commons. These are not laws in the true sense of the word for if broken no court would take notice of their violation. What Mr. Hornwell is concerned in his book is the treatment of such unwritten laws in the Constitution of U.S.A. Naturally we shall expect a very interesting book. Chapters 2 and 4 serve as especially interesting. The general public will be interested to hear that one of the principal aims of the founders of the American Republic was to make the New World safe a just democracy (P. 26—the italics is mine). The method of electing the President (p. 28-29) is rather thought-provoking especially in these days of Communism. Socialism or mob auto-racy. Chapter 4 on Third Presidential is illuminating in the light of what is at present happening in U.S.A. Mr. Coolidge has just refused to seek his third term. And why? Gamaliel Bradford that noted literary critic of United States referring to Cleveland's refusal to accept the third nomination referred to it as the popular prejudice, which has almost reached the point of superstition against a third term for any President. Why Cleveland alone? George Washington Jefferson Jackson Grant Roosevelt all of them refused the third presidential terms. And now comes Coolidge! A typical Britisher the author is specially hard on the 18th Amendment of the American Constitution. He thinks the Amendment which enforced the Prohibition law in U.S.A. is unconstitutional we wonder.

A well written book the general public ought to like it even if it was meant for the English public. Apart from sweeping generalisations at places the book does not betray much of partisanship. And one such sweeping assertion is found on page 242 where he makes all American citizens as believers in Political Fundamentalism that this is a false estimate must be asserted by those who have studied the trends of thought in America during the last fifteen or twenty years.

EVOLUTION AND CREATION. By Sir Oliver Lodge published by Hodder and Stoughton, London 3/6 Shillings net.

Apart from such technical books as Fiber and Reality. Electrons. Atoms and Rays. Sir Oliver has written such religious scientific books as the Making of Man. Reason and Belief or the

Substance of Faith. Therefore in publishing this present volume (Pp 164) the author has not gone beyond his range.

Contents—Eight chapters excluding the Preface and Prologue. The chapters are on Evolution in general. Creation or Origins. General reasonings about existence. Cosmic Speculation. Evolution of Plants and Animals. Evolution of Man. Perfection of Man (Conclusion & Epilogue. Worth of Humanity).

Some of these chapters embody the general sense of Huxley lecture delivered by the author at Charing Cross Hospital (December 1920) and like wise some midday talks on Evolution at Christ Church Westminster in the same month. The general idea represented in the conclusion to Chapter 8 about the main drift of the Bible as a whole is mainly due to the artist son of the author though the latter is responsible for adopting it. That this adoption has weakened the book scientifically will be seen presently.

Says the author (P. 10) My thesis is that there is no opposition between Creation and Evolution. One is the method of the other. They are not two processes—they are one—a gradual one which can be partially and reverently followed by the human mind. He says further (P. ix) Creation signifies the process by which all observed things—what we call natural phenomena—have come into being and it is a process which in many of its aspects mankind has become able to follow in some detail. We find that it is conducted in a spirit of law and order by a gradual process of evolution—a process of becoming and unfolding.

Printed in bold types and in good paper and priced rather moderately the book is accessible to all interested in the subject. There is one disappointment in the book however. At places the present publication is not quite critical. Says the author (P. 163) whilst talking on the worth of humanity—And ultimately God so loved the world that He gave the Son who are taught to call his Only Son to live on the planet, and to undergo the rejection the torture and the death which was in store for a Being higher than the sons of men could understand (the italics is mine). Here Sir Oliver seems to be in his devotional mood, not certainly in his critical attitude. We have already mentioned that Chapter 8 on the Perfecting of man betrays a certain weakness in the book. In the conclusion at the end of the chapter says the author (P. 160).

(There are) two main stages in man's evolution. First came the knowledge of good and evil the sense of sin the power of judging—the sense of transgression the sense of law. Thereafter man was prone to judge not only his own actions but those of his fellows, an era of criticism and self righteous judgment set in and continued through some terrible millennium of wrongdoing and backsliding as narrated in the Old Testament. First then the rule of human law and judgment. Then came a strange innovation a new dispensation replacing the old code of conduct by a spirit of human kindness charity service and brotherly love (P. 161). This gradation in the ethical consciousness of man may be in keeping with the evolutionary idea but is certainly not historically correct. All students of ethnology know that the sense of individual discrimination is a later development and not an early one. The trouble

and thought depend on the instrument of language. Most intimate and expressive of all languages is our mother tongue. But our mother tongue whatever it may be does not suffice for all we want to hear and read and say. Even if we are born into the inheritance of a mother tongue which has the wide currency of a world language we need sufficient command of another language in order that we may have the key to what otherwise is locked against us and in order that we may more fully understand the meaning and value of words in the passage of thought and sympathy. If on the other hand our patrimony is one of the little languages spoken relatively by few we need to master as our second language one of those which are passports.

Mr. Michael West aims at making easier for the multitude of men and women this travel and traffic of the mind. We endorse Sir Michael's opinion.

In this important and somewhat technical educational work Mr. West discusses the nature and origins of the problems of bilingualism, the history of the policy of bilingualism in Bengal, bilingualism and national culture, the advantages and disadvantages of bilingualism in the educational system of Bengal, the Bengalis' need of English, the silent reading ability in English of Bengali students, the problem of the improvement of silent reading ability in English in Bengali students, the English vocabulary of a Bengali boy and the teaching of English reading to Bengali boys.

H. S.

THE USAGES OF THE AMERICAN CONSTITUTION. By H. W. Horwitz. published by the Oxford University Press (1925). Pp. 121. Price 10s 6d.

Says the author in the Preface—Yet however accurate and comprehensive Lord Bryce's study (American Commonwealth) may have been it did not cover the whole ground in adequate detail. The subject of the present volume although full of interest to English and American readers alike occupies only a few pages of the American Commonwealth. The book has been written primarily for an English public (the author is himself an Englishman). The present volume is not the product of academic reflection at a distance. The author has spent more than six years in all

in the United States. The *Contents* include these twelve headings: Introduction. What is the American Constitution? The Election of the President. 'Accidental' Presidents. Third Presidential Terms. The President's Cabinet. The Cabinet and the Congress. Appointment and Removal. The Power of the Purse. The Resident Congressman. Miscellaneous Cases. Changes in the Constitutional Cases. The 'Safeguards' of the American Constitution.

A. V. Dicey writing on the English Constitution ('Introduction to the Study of the Law of the Constitution' P 22 ed 1915) analyses it under two main headings.—The Law of the Constitution. The Conventions of the Constitutions. These latter are the customs practices maxims or precepts which are not enforced by the courts. As examples of the Conventions of the Constitution (English) these two maxims are given here—'The King must assent to any bill passed by the two Houses of Parliament or Ministers resign office when they have ceased to command the confidence of the House of Commons. These are not laws in the true sense of the word for if broken no court would take notice of their violation. What Mr. Morrell is concerned in his book is the treatment of such unwritten laws in the Constitution of U.S.A. Naturally we shall expect a very interesting book. Chapters 2 and 4 serve as especially interesting. The general public will be interested to hear that one of the principal aims of the founders of the American Republic was to make the New World safe and democracy' (P 26—the italics are mine). The method of electing the President (p 28-29) is rather thought-provoking especially in these days of Communism. Socialism or mob auto-racy Chapter 4 on Third Presidential is illuminating in the light of what is at present happening in U.S.A. Mr. Coolidge has just refused to seek his third term. And why? Gamaliel Bradford, that noted literary critic of United States referring to Cleveland's refusal to accept the third nomination referred to it as the popular prejudice, which has almost reached the point of superstition against a third term for any President. Why Cleveland alone? George Washington Jefferson Jackson Grant Roosevelt all of them refused the third presidential terms. And now comes Coolidge? A typical Britisher the author is especially hard on the 18th Amendment of the American Constitution. He thinks the Amendment which enforced the Prohibition law in U.S.A. is unconstitutional! we wonder.

A well written book the general public ought to like it, even if it was meant for the English public. Apart from sweeping generalisations at places the book does not betray much of partisanship. And one such sweeping assertion is found on page 212 where he makes all American citizens as believers in Political Fundamentalism that this is a false estimate must be asserted by those who have studied the trends of thought in America during the last fifteen or twenty years.

EVOLUTION AND CREATION. By Sir Oliver Lodge published by Hodder and Stoughton London 196 Shillings net.

Apart from such technical books as *Fiber and Reality* *Electrons Atoms and Rays* Sir Oliver has written such religious scientific books as *The Making of Man* *Reason and Belief* or the

Substance of Faith. Therefore in publishing this present volume (Pp 164) the author has not 'gone beyond his range'.

Contents—Eight chapters, excluding the Preface and Prologue.—The chapters are on Evolution in General. Creation or Origins. General reasoning about existence. Cosmic Speculation. Evolution of Plants and Animals. Evolution of Man. Perfection of Man. (Conclusion & Epilogue Worth of Humanity).

Some of these chapters embody the general sense of Huxley's lecture delivered by the author at Charing Cross Hospital (December 1925), and likewise some midday talks on Evolution at Christ Church Westminster in the same month. The general idea represented in the conclusion to Chapter 4 about the main drift of the Bible as a whole, is mainly due to the artist son of the author though the latter is responsible for adopting it. That this adoption has weakened the book scientifically will be seen presently.

Says the author (P 14) My thesis is that there is no opposition between Creation and Evolution. One is the method of the other. They are not two processes—they are one—a gradual one which can be partially and reverently followed by the human mind. He says further (P 15) *Creation* signifies the process by which all observed things—what we call natural phenomena—have come into being and it is a process which in many of its aspects mankind has become able to follow in some detail. We find that it is conducted in a spirit of law and order by a gradual process of evolution—a process of becoming and unfolding.

Printed in bold types and in good paper and priced rather moderately the book is accessible to all interested in the subject. There is one disappointment in the book however. At places the present publication is not quite critical. Says the author (P 163) whilst talking on the worth of humanity—And ultimately God so loved the world that He gave the Son who are taught to call his *Only Son* to live on the planet, and to undergo the rejection the torture and the death which was in store for a Being higher than the sons of men could understand (the italics are mine). Here Sir Oliver seems to be in his devotional mood not certainly in his critical attitude. We have already mentioned that Chapter 8 on the Perfection of man betrays a certain weakness in the book in the conclusion at the end of the chapter says the author (P 150) (There are) two main stages in man's evolution. First came the knowledge of good and evil the sense of sin the power of judgment—the sense of transgression the sense of law. Thereafter man was prone to judge not only his own actions but those of his fellows an era of criticism and self-righteous judgment set in and continued through some terrible millennia of wrongdoing and backsliding as narrated in the Old Testament. First then the reign of human law and judgment, then came a strange innovation a new dispensation replacing the old code of conduct by a spirit of human kindness charity service and brotherly love (P 151). This gradation in the ethical consciousness of man may be in keeping with the evolutionary idea but is certainly not historically correct. All students of ethnology know that the sense of individual discrimination is a later development and not an early one. The trouble

with the English Evolution School of thought is that they refuse to hear anything from the schools of Diffusion on that of Behaviourism. We hope that Sir Oliver will in some future volume treat Evolution from a more critical point of view.

A. K. S.

TIBETAN SANSKRIT ENGLISH

NIYATAPRASA OF ACHARYA DITTAKI PART II
Tibetan Text Compared with Sanskrit and Chinese versions and edited with an introduction containing notes and indices. By Vidhushekhar Bhattacharyya, Principal Vidyalahara Sanskrit College, Calcutta. Oriental Series No. 11. Central Library Baroda 1927. Price Rs. 18.

We congratulate Pandit Vidhushekhar Sastri the Visvabharati and the Government of I.I.I. the Gakwad of Baroda on the publication of this work. The numerous Sanskrit works translated into Chinese and Tibetan centuries ago should be recovered and if necessary re-translated into Sanskrit. The Visvabharati has shown the way. Lovers of India and ancient Hindu culture should encourage such work in all possible ways.

The book contains a portrait of the philosopher Dinnaga, copied from the *Tanjur* (Tibetan Encyclopaedia) by Baitu Dhirendra Krishna Devavaman of the Kalahavyana, Visvabharati.

We intend to publish hereafter a critical notice of the book by a competent scholar.

R. C.

BENGALI

HALUM BORO By Pearymohan Sen Gupta
Published from the Prabasi Office 91 Upper Circular Road Calcutta. Price Ten annas 1927.

Mr Sengupta's Halum Boro is a welcome addition in the field of children's literature in Bengali.

The author of *Arunima* (a book of verses) and *Veda Dani* (a book containing translation of the vedic hymns) needs no new introduction to the Bengali reading public. His *Kafirer Desh Africa* (In Africa the Land of the Negroes)—a jungle-story book meant for children became immensely popular with his youthful readers. But the book of verses under notice will we think be likewise very popular with the Bengali reading boys and girls. The subject matter of these verses are either humorous stories or a song of rains or an animal story or a lullaby. The poems are written in an attractive style and are all profusely illustrated. The cover design has enhanced the beauty of the work. We are confident that it will make an excellent prize book.

H. S.

MARATHI

SISU SATYARDESH (सिखुसुवर्धन) (Upbringing of children). By B. M. Tebbe L.R.C. P & S & Co. Local Publisher V. S. Saravate Indore.

This is a small book of 124 pages mainly intended for conveying accurate information on

this very important subject to the Women of Maharashtra. The book has been divided into 18 chapters, the first of which deals with the elementary physiology and anatomy of man and the rest are devoted specially to the upbringing of children their diet, diseases &c.

The author has made a praiseworthy attempt to convey his information in non technical language not altogether with success. The first 3 chapters (pages 1-17) are specially open to criticism as the information given is not accurate. The technical terms employed in connection with anatomy and physiology could have been improved upon.

The chapters dealing with the upbringing of children are much better and the information given should prove very valuable to mothers and those who have charge of children. Should a second edition of this book be required the author should entirely rewrite the chapters on anatomy and physiology and increase the number and quality of the illustrations.

S. P. A.

MAHJEN RAMAYAN OR MY TALE OF SUFFERINGS
By Datto A. Tulapurkar B. A. LL. B. Published by the author at 40 Pictet Road, Kalbadevi, Bombay. Pages 192 with two full page illustrations. Price Rs. 2/8.

In this novel in imaginary Marathi lady of considerable intelligence, education and varied experience has technically narrated the story of her own life. Like the well known epic of Valmiki, this Ramayan is divided into several hands or sections, each section deriving its name from the nature of its contents. Like the Sanskrit epic this story also has grown in bulk the author having incorporated in it hot discussions on some knotty problems of the day, political, social, religious etc. The discussions though interesting and instructive are not necessarily connected with the main current of the story and at times only serve to divert the attention of readers to a feature which somewhat detracts from the value of the story. The range of subjects discussed is also so wide as to include in it religion, irreligion, the Purdah system and other social evils, education of females, Astrology, the Jallianwalla Bagh tragedy and other atrocities in the Punjab, the whimsical nature of the administration in Indian States and the money-grabbing practices of the solicitors of High Courts etc. So much heterogeneous matter is cleverly pieced together in the story by the author. However it cannot be denied that the Art is thereby suffocated. Here one can very well ask a question whether the art of the novelist properly consists in depicting characters faithfully and in showing the various stages of their development or in merely chronicling events in an individual or collective life more or less exciting emotions or quickening intellectual reasoning. Another question suggested by the perusal of this and similar novels recently published in Marathi is whether it is an allowable or desirable practice for novelist to introduce characters or actions so thinly veiled as may be easily identified with persons and their actions in the real world. With all these defects the novel under review is thoroughly readable, entertaining and in places captivating. Progressive views are advocated throughout the book and there is no doubt that the reader will feel benefited by its perusal.

The picture named 'the six headed Goddess of Maharashtra', given as the frontispiece is well-conceived though misnamed the six headed Goddess since there is not a single combination picture with one body and six heads but six separate pictures artistically arranged in one page of six several persons viz Shiwaji, the Great Ramdas Dnyaneshwar, Tularam Devī Ahalyabai Holkar and Rani Lakshmi bai of Jhansi representing six high ideals which every Maratha will do well to place before his mind's eye, if he desires to succeed in life and to elevate his mother country

V G ARTE

GUJARATHI

ANANDA DHARA PARTS I II III IV —By Ramanlal Nannal Shah, are a collection of short stories likely to interest and amuse children with pictures. It is an enjoyable collection

KELAVANI NA PATA By Kishorlal G Mashruvala, printed at the Navjivan Printing Press Ahmedabad, Paper Cover Pp 245 Price Re 1 (1926)

These are most thoughtful essays on the foundations of education by one who is born an idealist and a practical teacher who has learnt his lesson by experience. The essays are replete with hints and suggestions, on the teaching of various subjects, which are sure to prove of great value to those who are in the line.

AYAKADA SHASTRA NAN MUL TATTVO (ELEMENTS OF THE SCIENCE OF STATISTICS) By Chandulal Bhagubhai Dalal, printed at the Vasant Printing Press Ahmedabad Thick card board Pp 154+9 Price Rs 14 (1926)

This manual on the Science or Statistics is intended as a text-book for schools where the subject is to be taught in Vernacular. It is based on several well known authors' talented works and illustrated with charts. It is a fairly good attempt for a subject yet in its infancy

SREKSHAR TRIVEDI By Tanmanji Shankar L Shri, printed at the Dharm Vyaya Printing press Bombay, Paper cover Pp 60+16 Price Re 0-12-0 (1927)

Three love-poems, the *Shringar Tilak*, the *Pushpa Banavitas* and the *Chour Panchashika*, are translated from Sanskrit into Gujarati verse. The spirit of the original seems to have been fully preserved in the translation and what remains has been fully explained in the notes at the end. We congratulate the translator on his successful attempt

BALAVARTA PART IV By Gynubhai, is a collection of stories for children narrated by the collector in his inimitable Kathiawad style

FULMALA, PART I By Ramanlal Nannal Shah, printed at the Vasant Printing Press Ahmedabad Thick card board Illustrated Pp 180 Price Re 0 14 as (1927)

As an entertaining collection of stories of juvenile interest the book is likely to be welcome

CHANDANT is a monthly devoted entirely to the publication of pleasant stories. We do not review periodicals

THE HISTORY OF ENGLAND PART I for the IV standard of high schools by Chhaganlal Chumlat Mehta B.A. is an attempt in the right direction

THE THIRD GUJARATI BOOK By Chhotalal Balakrishna Purani is projected for the use of Vidyapitha students. It contains very good lessons which are both instructive and informing

1 NAPOLEON BONAPARTE PARTS 2, 3, 4 Gokaldas Mathradas Shah, B.A. LL.B. a very good translation of Abbots well known biography of the Emperor

2 AKBAR By Babubhai Jadavrai Vanshanar B.A. giving the salient features of his reign.

3 THE HISTORY OF THE BARODA RAJYA. By Chumlat Maganlal Desai B.A., giving a succinct but interesting account of its rulers.

4 LONDONERS' EDUCATION By Narahori Shankar Shrinankar Shastri B.A., showing what the London County Council is doing for the Londoners' Education

5 JATISWADHAN SHALAL PARTS I and II By Kani Shivalal Lalubhai Barot containing 100 spirited stories illustrating human nature. All these five works are published by the Commissioner of Education Baroda State

ORISSA FLOOD DISASTER

By SAKAT CHANDRA GHOSH M.A. B.L.

OWING to the recent high flood of the Baitarani river, which surpassed all previous records of the last century by 4 inches of water, and owing to the fact that the Dhamra Mhan was silted up and consequently closed, the surplus water could

not be discharged, and as an inevitable result of this hundreds of villages on both sides of the Baitarani river were swept away, causing serious damages to men, money and cattle. The aforesaid river is the boundary line of the Jaipur Subdivision of the Cuttack

District and the Bhadrak Subdivision of the Balasore District. So this flood disaster caused loss to both the Cuttack and Balasore Districts the loss to the latter being greater.

On reading the news of the horrible disaster in the columns of the newspapers and the report of the Chairman of the Local Board of Jajpur, myself in company with Babu Lakshminarayan Sahu & A., set out to visit the affected areas. It may be mentioned in this connection that my friend Babu L. N. Sahu who is a member of the Servants of India Society received a sum of Rs 500 from the said Society and directly from Mr C. S. Deole Member, Servants of India Society, Secretary of the Orizart and Kathiawar Flood Relief Committee for distributing the same among the sufferers, and a further sum of Rs. 500 has been promised by Mr Devadhar President of the said Society, for the said relief hut to be repayable within 14 years. With the latter sum it has been arranged with the Secretary of the Jajpur Co-operative Bank to start a grain gola in the area which the Honorary Secretary Babu Gobinda Prasad Bose has kindly consented to take over charge and to start soon.

Accordingly we went out on our mission with the aforesaid sum of Rs 500 for immediate relief.

By visiting a few villages viz Dehury Anandapur, Misserpur, Sendhpur among hundreds and hundreds of such villages I personally saw the people to be totally helpless ill clad and reduced to the condition of beggars their houses being swept away, their valuables and household articles of everyday use and clothing being gone and to add to this their cattle property too has been lost. The condition of the women is worse still. They have no clothing to clothe or wrap their body with and maintain their *izzat* so to say and so they cannot stir out for food even.

The condition of the middle class men is deplorable. Though now reduced to the condition of beggars they cannot forget their former family prestige in the presence of their co-villagers over whom they had control and by whom they were looked upon with respect. They cannot go out for rice dole distributed at certain places though they are the most needy persons. The poor can starve as they are accustomed to do so but the middle class though not accustomed are really starving now. They are not getting a morsel of food even in two days.

The present winter crop cannot relieve them of their distress. They must be helped till the winter crop of the next year, i.e., till December 1928. They must be made to survive, otherwise they must die out. Paddy granaries have been washed away, so paddy must be supplied to the sufferers and golas must be started at certain centres. The Congress party, I am glad to mention, have arranged to open a gola in Dehury Anandapur village.

The disaster became so great because the water remained constant for 3 days together. People had to climb upon trees to save their lives and remain there without food for 3 days. So it could be easily imagined how it would be possible for them to save their property, and that would be the condition of their mud built houses. The flood reached its highest pitch on the 29th July. In previous years it used to remain for a few hours only instead of 3 days this time.

The loss has been considerable to these villagers among many others of which I had no personal knowledge, viz, Dehury, Anandapur, Sendhpur, Contapari, Misserpur Mouza Aibas in general, village Sahara and Jamuna the last two being near Jeppur town.

I cannot picture the lamentable condition of the poor sufferers of the Dehury Anandapur village which I saw with my own eyes. The mud walls of the villagers are all gone, the paddy stocks washed away, the household utensils and valuables all gone, the thatches of some swept away and the houses completely levelled to the ground. Some of the local zemindars even, whom I do not name here, have been made houseless now. They cannot beg or receive rice doles anywhere as they are not accustomed to sell their family padigree or prestige but are remaining starving for days together. The people are taking rest under the palm leaf sheds. These palm leaf sheds rest on bamboo props with no walls at all round. Thus their *purdah* is gone! How deplorable is the state of affairs can be easily imagined by the sensible public. During the high flood i.e. from 29th to 31st July last, the work of Babu Mahendra Nath Dutta a local zemindar, was commendable. When life was at stake and each one was trying to save himself by plying in a small country boat he brought helpless people to his house and gave them shelter for 3 days together. Now when the flood is all over, relief is being given by others and the place is being visited by outsiders like us. But at the critical

junction none have dared even to go there. Such village patriots are wanted in all places.

In this connection I must mention that Babu L. N. Sahu agreed to distribute Rs. 165 to 31 deserving persons here out of the fund at our disposal. Accordingly the above sum was paid. Though the sum is—altogether inadequate in view of their present distress, we cannot do more with the fund with us at present.

In Kantapari village we heard that Jagannath Babu zeminder was on the alert and was trying to arrange a rice gola there and has gone to Chandbali to purchase rice. His actions are praiseworthy.

The condition of the Misserpur villagers is little better. We happened to be there just after a severe shower of rain. We actually saw the people houseless, helpless and shivering in the rain water. We made a list of deserving persons. They were 30 in number. They were given cash for house building purpose. I must frankly admit that this help of ours is inadequate to their present need, but looking to our funds at hand we cannot allot them more for the present.

The people have lost their houses, have no clothing to wrap themselves with. The

winter is coming and what will be the fate of the poor villagers can be best imagined by all sensible human beings. What I relate here is nothing but plain truth and no exaggeration. On our return journey we visited the Jamuna village 7 miles to the west of Jajpur town. Here the villagers have been made houseless and the lands have been made useless by the deposit of sand, 31 persons were given help by my friend Mr. Sahu.

In conclusion I must say that the relief now given by the Government, by the Swarajists and by the Marwari community is quite inadequate for the purpose—the loss sustained being roughly estimated to be several crores of rupees. Unless the relief work be continued over one year, i. e., till the end of December 1923 their distress will not be relieved in the least. I earnestly appeal to the general public to open their purses and try their best to relieve the present distress of the millions of our poor brethren, who have been reduced to the condition of beggars in the true sense of the word. To achieve this and more money is needed, as relief in the shape of distribution of food grain, cloths, and help for house-building purpose, are necessary. Distribution of cloths I must say, is absolutely necessary.

POPULATION AND FOOD SUPPLY IN INDIA*

By RAJANI KANTA DAS, M.A., M.Sc., F.R.S.

Economist, International Labour Office

(Read before the World's Population Conference Geneva August 31, 1927.)

GROWTH OF POPULATION

IN 1921, India had 319 million inhabitants or 17 per cent of the world's population. In 49 years from 1872 to 1921, the

population in India increased by 113 millions of which 53 millions were due to the territorial expansion and census improvement, thus leaving a real increase of 54 millions or 20 per cent, as compared with an increase of 47 per cent, in Europe in 50 years from 1870 to 1920.

This slower growth of population in India is due to the higher death rate rather than to the lower birth rate. While from 1880 to 1910, the average annual birth and death rates in England and Wales, France, Belgium, Germany, Italy and Spain were

* References—Census of India, Agricultural Statistics of India, Statistical Abstract for British India, Annuaire Statistique, International Agricultural Statistics, World's Almanac, Finch and Baker's Geography of the World, Agriculture, Dams, Production in India, Wastage of India, Manpower (Modern Review Calcutta, April 1927) etc.

respectively 311 per cent, and 220 per cent, thus leaving a surplus of 91 per cent, a year, those in India from 1885 to 1910 were respectively 364 per cent, and 308 per cent, with a surplus of only 56 per cent, a year. During the last decade, the death-rate in India amounted to as high as 341 per cent, as against the birth-rate of 369 per cent, thus leaving a surplus of only 28 per cent, a year. From 1885 to 1921, the average rate of growth was however, 48 per cent, a year.

At the rate of growth of 48 per cent, a year as above, the present population of India would amount to 385 millions. What would be the rate of growth in the future is a matter of speculation. But it might be safely assumed that various social movements especially those for health, would decrease the death rate, and at a very conservative estimation of an increase of 5 per cent a year, the population in India would in all probability, amount to 370 millions in 1950.

only 13 hectre per capita, as compared with 30 hectre in Italy, 53 hectre in France, 83 hectre in Austria and 11 hectares in Spain. The minerals in India are similarly rich in kind, but poor in quantity, except in iron and water. India possesses 11 per cent, of the world's coal reserves and 22 per cent, of the world's petroleum resources, but stands fourth in the possession of the world's richest iron ore deposits and third in that of the water power resources.

can increase her productive power and supply the needs of her present population. In his treatise on *Production in India*, the present writer has estimated that provided the arable land could be used for two crops a year on the average, three-fourths of the soil fertility as well as other resources could still be available for productive purposes. But the possibility of their utilisation depends upon the efficiency of labor and the sufficiency of capital. That Indian workers have as great potential efficiency as that of any other people has been clearly shown by the investigation into the conditions of Hindustani workers on the Pacific Coast which the present writer undertook for the United States Bureau of Labor Statistics in 1921-22. But by far the major part of India's manpower is underfed, diseased, illiterate and unskilled. Equally deficient is India in the possession of her social capital. Machinery and mechanical power have up to this time been applied to only an insignificant part of her industrial life. Nor are there large social savings which could be transformed into working capital in the immediate future.

The prospects of rapid increase in productivity are not, therefore, very bright. Moreover, the more or less limited supply of forest fisheries and minerals, even when fully developed can scarcely supply the growing needs of the progressive civilisation of such a vast population. Of the arable land, about 50 per cent are already in use and any intensity in culture would operate only under the condition of diminishing return, especially in India where land has been cropped from time immemorial without any return in the form of fertilizers. The appropriation of other 45 per cent of the arable land would require irrigation, drainage, fertilisation, acclimatization and other scientific treatment. In short it would take at least two generations before India could acquire industrial skill and social capital for the application of modern science and invention to the full utilisation of her resources, and thus be in a position to solve the problem of present food shortage but in the meantime the present population would increase at least by 50 per cent, if not more.

NATURE OF THE PROBLEM

Both the insufficiency of resources and the inefficiency to develop them have made

India one of the most overpopulated countries of the world. The effect of overpopulation is manifested in several ways. —First *famine, and epidemics* the former for instance, caused the death of 5 millions in 1893 and 1894-1900, and the latter of 85 millions in 1918-19. Second *high mortality*, which is 306 per cent as compared with the average of 145 per cent in England and Wales, France, Belgium and Germany. Third, *low Longevity* which is only 247 years in India as compared with the average of 50 years in England and Wales, France, Germany, Holland, Norway, Italy, United States and South Africa. When 15 years are taken out for childhood the average manhood period thus becomes less than 10 years in India as compared with 35 years in the above countries. Fourth *widespread illiteracy*, which amounts to 91 per cent of her population. Out of 84 million children between the ages of 5 and 15 76½ millions or 90 per cent have no provision for elementary schooling even to-day. That more than nine-tenths of the people are ignorant of modern science and philosophy can be easily imagined.

What is the extent of overpopulation in India is hard to estimate for the lack of sufficient data. The optimum population of a country depends upon the cultural ideal of the people as determined by natural resources and industrial efficiency. But there is growing a more or less common standard of life which all countries sooner or later must adopt for the moral and material benefit of their people. Judging from that standard some rough idea may be had of the extent of overpopulation in India from the following facts. —First, the food shortage in India amounts to about one-third of the required amount and excluding exports, to much more than that, as noted before. Second, the food consumption of a Madras prisoner amounts to 741 pounds a year as compared with the per capita consumption of 2684 pounds in the United States. The food in India is not only small in quantity, but also poor in quality, and the food consumption of the majority of the people in India falls far short of this amount. But taking this amount as the national average, the per capita food supply is much less than one-third of that in the United States. Third, in a recent article in the *Modern Review*, the writer estimated that one-third of India's manpower was lost through under employment and

another third through inefficiency brought about by disease and illiteracy. Fourth on the basis that a person needs about 25 acres of arable land for a decent living as claimed by some writers the optimum population that India with her 480 million acres of arable land could ever support would be 192 millions but since at present only 55 per cent of this area is cultivated the present optimum that India can support would be only 106 millions or about one third of the present number.

All these facts indicate that only one third

of the present population could live in India with proper facilities for the development of their body and mind and for the achievement of the highest degree of self expression. Even with plain living and high thinking which has been the ideal of Hindu civilisation one is inevitably driven to the conclusion that there exists in India today under the present state of her industrial efficiency double the size of the population which could live with moderate degree of opportunity for moral and material development.

SCRAPS AND COMMENTS

By TARAKNATH DAS

German Japanese Institute in Berlin

The first lecturer to come from Japan in Berlin University is Dr R. Kanokoji who at the same time will be the Japanese director of the new inaugurated Japanese-German institute.

I hope that the Indian educators and leaders interested in establishing intellectual co-operation between India and Germany will take notice how the Japanese are working to promote Japanese interests on a world scale. It is necessary that the Greater India Society of Calcutta should have a German Section for its activities and scholars like Prof. Benoykumar Sarkar and others who have thorough knowledge of German academic life should take an active part in promoting Indo-German Cultural fellowship.

Japanese Patriotism

Japan has risen to the position of one of the Great Powers with the third largest navy in the world. Japanese educational, industrial and commercial progress attracts universal admiration. All this has been achieved through Japanese efforts to acquire all that is best in the world. Japanese businessmen have freely spent money to promote the cause of natural progress. The following Tokyo despatch is merely an instance of Japanese patriotism.

"A prize of 120,000 yen for the first trans-Atlantic flight was offered today by Kumajiro Iakubo, business man and Member of Parliament.

We hope Indian businessmen will follow the Japanese example of aiding Indian institutions of learning particularly technical schools. Before India can have flyers who will venture to fly across the Pacific, it is necessary to equip Indian institutions properly so that they may be able to teach mechanical engineering including aero dynamics, naval engineering, electric engine, etc. Enlightened self-interest and patriotism of Indian businessmen should induce them to further the cause of scientific and technical education in India.

Slavery As Practised By Christians

Readers of the *Modern Review* may remember that Lala Lajpat Rai as the Indian Labour Delegate to the International Labor Conference of 1926 held in Geneva proposed that the International Labor Office should investigate the condition of Native and Asiatic Labor in various parts of the world. South African Labor Delegates and others persuaded Lajpat to drop the question of investigation of the condition of Asiatic Labor.

It seems that the International Labor Office is carrying on some investigation on the condition of Native Labour in Africa.

Chained by the neck, dragged from their tribal homes and forced to labor ten hours a day under the most abject conditions native blacks of Africa

are dying like flies because it is cheaper to replace them than care for them in many instances of colonial forced labor."

Such was a part of the graphic story recounted here by Mr Harold A. Grimshaw chief of the Native Labor Section of the International Labor Office.

Mr Grimshaw stressed the importance of public opinion as a main factor in binding each individual nation to the agreements reached by a committee of colonial experts in Geneva. These conclusions embody the four following postulates which in his opinion must be strictly adhered to by each colonial government.

1. That there shall be no forced labor either direct or indirect for private profit.

2. That there must be definite criteria for the use of public forced labor involving clear necessity and actual effort to obtain voluntary labor.

3. That all forced labor should be adequately paid except in instances of dire emergencies or ordinary sanitation measures.

4. That only fit males should be forced to work, and even then not without a specified guarantee of adequate medical attention. Women and children should never be compelled to work under any circumstances.

We must say that the above mentioned recommendations are full of loop holes and will not help abolishing slavery as practised by the Christians and Superior white peoples in Africa.

The second recommendation approves of forced labor under certain conditions. These conditions will naturally be determined by the present day slave-drivers under the cover of meeting 'public need' which will mean the need conceived by the white overlords. The fourth recommendation approves of forced labor to be carried on by fit males and the third recommendation approves of inadequately paid or unpaid forced labor in instances of dire emergencies or ordinary sanitary measures. We need not comment on the things that are made legal as emergency measures.

In this connection let us emphasise the point that we are unalterably opposed to all forms of social, economic and political slavery which crushes man. So we are opposed to the awful practice of 'untouchability' existing in India among the Hindus. But we must say that the lot of the untouchables are not as bad as the condition of the African Natives, living under the guardian ship of free white and Christian masters.

Christian missionaries and others often tell us that as long as there is such social injustices as untouchability, etc., prevalent among the Hindus there is no chance for the Hindu Indians to secure freedom. Indeed they have no right to ask for self government. If we

understand history correctly, from the days of Aristotle up to the present time the people of Europe practised slavery. The Christian theologians a little over half a century ago used to oppose all movements for freeing slaves as anti-Christian. In spite of the existence of chattel slavery in England and America the people of these lands always stoutly uphold their right to freedom. The British Empire is the biggest of the World Powers to-day, but it is in some sense a slave empire, where the native peoples have been exterminated or are being exploited. Slavery as practised and tolerated by the Christians is a form of civilized barbarism which is far worse than the practice of untouchability which also is of course wicked.

Railway Development in Persia

The Meirs has authorised the Government to engage for a period of two years 34 foreigners for the various departments of railway construction. In addition to those already engaged it is intended to get eleven Americans at a salary of \$17,000 per annum, one German at 5,000 toman, six Germans or Swiss at 24,000 toman, one Belgian at 3,000 toman, three Dutch or Germans at 12,400 toman, twelve Germans, Swiss, Americans, French or Italians at 40,000 toman. The Government may terminate the contracts on payment of three months' salary and a return passage. The Government is also authorised to submit for tenders by foreign companies the construction of any section of the line which it considers advisable.

This interesting piece of news shows that the Persian statesmen are following the footsteps of Japan and Turkey in the employment of foreigners. They have taken special pains to see that in the work of railroad construction no Englishman or Russian be employed. (Recently Turkey gave the contract for railroad building to a Swedish concern.) The above report shows that these foreign advisers of Persia will be less expensive than the British advisers in India. Persia's foreign advisers are mere employees who can be fired from their jobs at the will of the Persian Government. The Britishers who are employed in India assume the role of rulers and they cannot be got rid of so easily. They live in India upon fat salaries and then enjoy pensions, and retire in England to carry on, in majority of cases, anti Indian propaganda.

We are often told that one of the boons of the British rule in India is the introduction of railroads, telegraphs, etc. It seems to us India could have her railroads built cheaper

and under Indian control if the Indian people were free and independent.¹ No need of weeping over India's enslaved condition. It is however, desirable to devise means for Indianising Indian railways. It seems to us that if India needs foreign advisers some American, German, Japanese, French or Italian experts should be employed under Indian control. India is 'a happy hunting-ground for British job-hunters and this is bound to remain so until the Indian people become masters of their own country.'

Anglo-Soviet Relations

(REUTERS TELEGRAM) MOSCOW AUG 4 1927

In an interview with the press to-day Mr Chichester Foreign Commissary said:

"You are interested in the meaning of the story appearing in the foreign press about alleged proposals made to the Soviet Government by the British Government for the renewal of diplomatic relations between the Soviet and Great Britain. In reality the Soviet Government has received no proposals."

With regard to Sir Austen Chamberlain's utterances in the House of Commons on July 28 they consist firstly of the usual attacks on the Soviet Government which are intended to cover before public opinion in Great Britain the inadmissible steps against Soviet Russia which the Conservative Government in England has undertaken and is undertaking, such as the Peking raid the Arcos raid the calumnious story of a document "the rupture of diplomatic relations &c."

The Manchester Guardian—Aug 6 1927

The present British Government broke off diplomatic relations with Soviet Russia to bring about political as well as economic isolation of the latter.

So far this has not materialised. In fact, a new controversy has arisen between the British and American oil interests on the questions of trading in Russian oil. The Standard Oil Company of New York and the Vacuum Oil Co., a subsidiary of the Standard Oil Co. have entered into extensive trade and contracts with Russia, this has upset the British oil interests considerably. If within a few months the Soviet Government could not be overthrown or reduced to submission, to British foreign policy, there would arise a cry in England against the Russian policy of the British conservative Government. It is hardly expected that the Conservative Government will immediately take the initiative to reopen negotiations with the Soviet Government. The Anglo-Russian relations will supply ample ammunition for the Labor Party during the coming General election in England.

Indian Students Abroad and the Greater India Society

One of the aims of the Greater India Society is to establish cultural relations between India and the rest of the world. Indian students in foreign countries should be utilized for the promotion of this object. In fact, there are now in existence various organizations of Indian students in foreign countries such as the Hindustan Association of America, Hindustan Association for Central Europe, Friends of India Society in Paris, and various Indian students' organizations in Great Britain and Ireland and the Indo Japanese Association.

If proper co-ordination can be worked out then under the auspices of the Greater India Society, an International Federation of Indian Students can be effectively organised. Taking it for granted that an International Federation of Indian students is a desirable thing, we take the liberty of suggesting the following practical steps. First, the Greater India Society should have six divisions (a) Asian Division, (b) European Division, (c) African Division, (d) North American Division, (e) South American Division and (f) Australasian Division and each of these divisions should be subdivided into various departments comprising important countries or a section of a continent. Secondly efforts should be made to centralise various Indian students' organizations existing in a country into one effective organization with various branches. For instance, various Indian students' organizations in Great Britain and Ireland should be incorporated into one organization like the Central Union of the Chinese Students in Great Britain and Ireland. Thirdly these centralized organizations should be directly affiliated with the various Departments and Divisions of the Greater India Society. Fourthly, the Greater India Society should adopt various measures to enable the most competent and representative scholars to go abroad to promote cultural relations between India and other lands. At present the existing Indian students' organizations in foreign lands have no substantial contact with the Indian intellectual public. The leaders of the Greater India Society fully realize the need of establishing effective international cultural contacts between India and the rest of the world. Let us hope that some means will be devised that in India, some organization may serve the purpose of

the International Federation of Indian Students, and all the Indian Students' Organizations in foreign lands may be affiliated with it

A Phase of Soviet Russia's Programme for National Defence

The Soviet Russian Government has adopted the programme of building 120 new aeroplanes within the year 1927. A sum of two million rubles has been appropriated to build four factories and to buy machines from America and other countries. It has been planned to establish an air base at Vladivostok. This is only a part of the programme for strengthening Soviet Russia's national defence. The increased activity in the field of air armament of Soviet Russia is apparently in reply to the British programme. In this connection it is interesting to note the following news item regarding the programme for the increase of British air forces for 1927-1928:

'Substantial increases in the British Air forces are provided in the estimates for 1927-1928.

It is proposed to raise the strength of the Royal Air Force for the coming year by 6¹/₂ squadrons: three for the home defence branch, 2¹/₂ for the fleet, and one for the army which brings the total squadron strength up to 62¹/₂ units. Last year only two squadrons were added to the force.

Eleven new types of planes will be constructed and all old engine and plane designs many of which were used during the war will be abandoned for the purposes of further construction. Delivery will be made shortly of three machines of the auto-gyro type, and extensive investigations of these aircraft will be carried out.

Anglo-German rivalry in naval strength preceded the World War. Are we to see an Anglo-Russian war in future?

German Chemists Discover Plasmochin

'A new cure for malaria called plasmochin has been announced by two chemists, Professors Sobel of Duesseldorf, and Muehens of the Tropical Institute, at Hamburg. This discovery recalled the drug germanium, a cure for sleeping sickness that startled the world in 1920. Like germanium, plasmochin was discovered in the Bayer laboratories.

Plasmochin is claimed to be a marked improvement over quinine, being cheaper, not so bitter and having a less serious after effect. It is said to check malaria parasites in their development so effectively that the natural defensive forces of the body can easily cope with them. Plasmochin and germanium are asserted by German chemotherapeutical scientists to be the greatest contribution in this branch in the last decade.'

One of the principal causes of the success of German scientists in their research works,

is that they are not only best equipped for such works, but the state and industrial organizations are behind the research workers. Every important industrial concern maintains its own research department and regularly uses a part of its income for this purpose. Let us hope that Indian businessmen will soon realize that the money invested for the promotion of science and research is the best type of national assets. It is apparent that all Indian industrial concerns cannot maintain their separate research laboratories and workers, this makes it imperative for them to extend their support to the Indian Universities to promote higher education and scientific research, which will aid Indian industry and national welfare.

Argentinian View on German Education

Argentine Students' Commission recently visited Germany to determine educational facilities afforded by Germany. The Commission, after their return to Argentina, has expressed the following view on German educational policy—

The thing which struck us most was the surprising revelation that a country obliged to practise strictest economy in order to fulfil its national obligations does not save on one particular point, the furtherance of Science! Germany occupies first rank in all matters of scientific research and it affords genuine satisfaction to the friends of Germany to become aware of this fact, for science and its development is the most important factor in Germany's future."

The future of India also depends upon scientific education, but Indian universities are starving for lack of funds and are stunted for lack of proper facilities for scientific research. If poor Germany can do so much under the most adverse circumstances for educational efficiency, is it too much to expect that the Government of India should do something more for the educational progress of the country than what has been done heretofore? We hope Indian politicians of all parties will unite to aid the cause of scientific education.

American Disarmament Activity

The United States of America is supposed to be interested in World Peace and disarmament. We have often heard that the American policy of anti-militarism can be described as preparedness for war is the best method of averting a war.

The moral and the ethical aspect of dreams is discussed and the conclusion is arrived at that the dream activity must be regarded to be beyond good and evil (3) The invasion in the Upanishads is not carried on from an exclusive and disinterested psychological point of view but is throughout trammelled by metaphysical presuppositions and implications (6) Dreams culminating in the waking of the subject and the waking state again leading on to dreams are cited as illustrations to support the view of transmigration.

From the above it appears that the ancient thinkers of India discovered in the course of their search after Truth (religious) things that seekers of Truth of modern times are re-discovering in the course of their scientific endeavour. The importance attached to the *rasanas* (desires) by the Rishis of old fit in extraordinarily well with the theories set out by the School of Freud and Modern Psychoanalysis.

Sensualism in Literature

The neo pornographic literature of to-day which sells in modern book stalls in the name of realism, democracy, psychology, science or enlightened fellow feeling has found a critic in Rabiindranath Tagore who writes in the *Vista Bharati Quarterly*.

Science is impersonal. Its very essence is an impartial curiosity about truth. And yet the all pervading net of this curiosity is gradually enveloping modern literature within its folds though of literature on the contrary the essence is its partiality—its supreme message is the freedom of choice according to the taste of man. It is this freedom which is being assailed by the invasion of science. The sensualism of which European literature is full to-day owes its origin to its curiosity as its prototype in the Age of the Restoration had its impulse in lust. But just as the lust of that age failed to win the laurel which could secure it a permanent place in the Olympian of literature neither can the scientific curiosity of this age maintain its keenness for ever.

There was a day in our country when a heat wave of scientific discussion passed over our society and stimulated our literature into an outburst of sensualism. It was a temporary aberration of which the modern reader refuses to take any serious notice not by way of moral censure but because he has ceased to record it permanent value.

Of late it is true, we notice the opposite tendency in some of our moralist critics who would rank sensualism the eternal virtues in interdependence of the flesh that has been imported into our literature from the Western world. But they forget that the eternal cannot wholly contradict the past. The natural decay which has always been a feature of man's ethereal enjoyment, the enjoyment of the aristocracy which has always reined in the realm of art—these are eternal. It is only in the

rankings of the science-intoxicated democracy of to-day that this modesty thus reticence, is dubbed a weakness and a rude manifestation of physical hunger is proclaimed to constitute the virility of art.

I have seen an example of this begrimed pugilistic modernism in the form that our *Holi* play has taken amongst the roughest of Chitpore Road. There is no scattering of red powder on spraying with rose coloured perfumes, no laughter no song. Rolling long pieces of wet cloth in the street mud and therewith bespattering one another and the unfortunate passers by to the accompaniment of unearthly yells is the mad form which this old time Spring Festival has here assumed. Not to tinge but to taint is the object. I do not say that such propensity is foreign to the mentality of man, the psychoanalyst is therefore welcome to revel in a study thereof. My objection to the importation of this common desire to soil into a festival inspired by man's æsthetic sense is not because it is not true but because it is not appropriate.

Some of those who seek to defend the bringing in of such muddy carousals into the region of our literary enjoyment do so with the question—*But is it not true?* That question as I say does not arise. When our drug-befuddled *Bhoppuri* festive party storm the welkin with the unending clang of their intoxicated drums and cymbals their demoniac shouts of an eternal repetition of the one line of their tuneless song it is entirely beside the point to ask the suffering neighbours whether or not it is true the only relevant question can be *How is it music?* There is admittedly a kind of self forgetful joy in inebriation there is undoubtedly great forcefulness in an unrestrained exercise of lung power and if the ugliness of incontinence has to be taken as a sign of virility then we must needs admire this athletic intoxication also. But what then? This forcefulness still remains of the slums of Chitpore it cannot aspire to the Elysium of Art.

In conclusion it should be added that if in the countries ridden by science, an indiscriminate curiosity should *Duhshasana* like seek to strip the goddess of literature of her drapery they have at least the excuse of science to offer for such conduct. But in our country where neither within nor without, neither in thought nor in action has science been permitted an entry what excuse can serve to cover up the insolence of the spurious borrowed modesty that has come to infest its literature? If the question be sent to the other side of the seas *Why this turmoil of the market crowd in your literature?* The answer will come *That is no fault of our literature, the cause lies in the markets that surround us.* When that same question is put on this side the reply will be *True markets we have none but the noisomeness of the market place is all there that is just the glory of our modernism.*

Beware of Fat

Ashutosh Roy L.M.S., contributes a highly interesting paper on the role of Fat

in Health and Disease to the *Calcutta Medical Journal* Regarding Bengali dietary and obesity, Dr Roy says

While Bengalis do not take excess of proteid they take excess of carbohydrates and sweets and in the case of well-to-do people excess of fat also. The result is *National obesity* Surely the pot bellied Bengali is not the best type of Asiatic manhood

While they take excess of energy producing foods like fat and sweets they never attempt to burn this excess of food stuff by physical exercise. Their life-long sedentary habits only aggravate the storage of fat for it is notorious that excess of carbohydrates not utilized as energy is readily converted into fat and deposited as such in the body

Instead of adding to the beauty of the body these excessive deposits of fat not only disfigure them but prevent further physical activity as they always carry an extra unnecessary load in their body as deposited fat. A vicious cycle is thus produced

Generations follow this pernicious habit—while in the good old days the Pancreas used to get rest (forced rest) with other digestive organs for the various fasts and semi fasts imposed on the Bengalis and Hindus generally in the name of religion to ensure better health and more active life the present critical stage of our National life the struggle between the old and the new the East and the West in every sphere of life is upsetting everything. We have forgotten the golden rules of individual hygiene of our ancestors, on the other hand we have not absorbed the modern ideas of hygiene. The orthodox ancient indigenous hygiene should as much be modified as the modern reported exotic hygiene to suit our present condition which is different from ancient India or modern Europe

In these days of great economic stress and strain there should be a cry all over Bengal not only to increase the proteid but to reduce the fat and carbohydrate particularly excess of sweets from our National diet. There should be more vigorous physical exercise in the open. If this is persistently followed there is no reason why the health of the Bengalis would not be improved

Dr Roy's words of advice would prove salutary not only to Bengalis, but to all Indians who are obese through eating the wrong food

Where Government Servants Die like Fleas

The *Labour* organ of the provincial postal and R.M.S. Association Bengal and Assam Circle, points out how the conditions of service in the Dooars and Terai are actually killing out postal workers in those parts. We are told

Are not the lives of the postal officials serving in Dooars and Terai worth anything? This is the question that arises painfully in our mind when we see that the Government has not yet adopted any measure calculated to improve the condition of service in these places. At about this time last year some of our young friends full of hope and promise were cruelly snatched away from our midst by black water and other fever prevalent in Dooars and Terai. The whole Division was pained-stricken and though we brought the gravity of the situation to the notice of the Government through proper channel and prayed for immediate relief by suggesting some remedial measures for adoption without loss of time but unfortunately all to no purpose

This year also the season is on with all its fearfulness claiming Nabakanta Seal Postman Nathuhat (Dooars) and Seodin Misir Overseer Falakata line as its first victims. Who knows how many officials have to share the same fate if this state of things be allowed to continue. Reports of sickness are daily pouring in. Officials of Jaguari division are really passing their days in great suspense and anxiety ready always to meet their doom like goats at the block erected for sacrifice

It will not be out of place to mention here that the condition of Overseers is even worse than that of clerks. Out of the total strength of 9 Overseers 7 Overseers (1) Ramcharitar Singh (2) Dughasan Lal (3) Sahadeo Sukul (4) Harakraj Gira (5) Dhaman Singh (6) Sheoprosad Singh and (7) Seodin Misir died within a period of last 4 years or so.

It is therefore high time that the Government should awake to a sense of responsibility and take measure to alleviate the sufferings of the loyal workers of the department before it is too late to mend

Learning by Doing in the Philippines

D Spencer Hatch writes in the *Young Men of India* about education in the Philippines. He gives us a good idea of how the people of those islands are moulding their future citizens into shape, men of ability ideas and experience who will surely make the islands prosperous and great. We are told

While trying to learn what we could about the agricultural and vocational education and school gardening in the Philippine Islands it was most pleasurable to find actually in operation a sound principle about which there is not now increasing interest and talk in India.

The principle of learning by doing

We may well illustrate how we saw this idea working in different forms and in different places by taking especially of the Central Luzon Agricultural School at Muñoz. This by the way, the Monroe Survey Commission considered one of the very best of the fifteen agricultural school or college ventures in the islands.

When the students arrive at the school they

thirty years will be the greatest nations in the world according to Senator Millard Tydings of Maryland who has just returned from Russia after a careful survey of Soviet conditions.

"Russia under the Bolshevistic rule still has a great deal to learn," explained the Senator yesterday but the condition of the masses is so improved today in comparison with old Russia that one is struck with the advancement of the common people.

The outstanding complaint that I have to make against the present regime is the constant arrest of political prisoners. In this sense the Soviet is laboring under the very complaint that the present government freed itself from as a result of the revolution.

In other words it is trampling on free speech which is the basis of any democratic government. If a man or woman voices an opinion against the present government they are immediately thrown into jail which is tyranny in its worst form according to my estimation.

But with all their mistakes they are learning remarkably fast. After a careful study of their procedure it appeared to me that the Russians

have patterned their government after that of the United States, with a slight regard to the German Republic.

They are constantly turning away from the radical side and more than ever leaning toward the conservative. The Russian is a thinker and he knows that a nation cannot divert itself too far away from the rest of the world's conceptions.

I talked to such men as Chicherin Shoulin and Soudron during my stay and their sentiments greatly resemble the American tendencies. In fact, it seemed to me that the proudest moment that any of the Russian officials felt was when their country or its programs was likened to the United States.

The British Government is sincerely interested in fighting Communism in India. But unfortunately it fosters and practices the communist methods in India by enacting and enforcing lawless laws which condemn honorable and patriotic Indians to prison cells without any trial and redress only because of their political opinion.

INDIAN PERIODICALS

Buddhism in Russia

The Buddhist an excellent monthly published by the Young Men's Buddhist Association of Colombo, gives us the following information:

A movement is now afoot in Russia to propagate Mahayana Buddhism in that country. Buddhist representatives from Tibet, Mongolia and other countries of Central Asia have met in convocation to discuss and settle the details of the organization. Buddhism will it is believed appeal to the peoples of Russia better than any other religion. Should Buddhism be adopted for their national religion there is of course the tendency to modify its established tenets so as to make them fit the political conditions of that country. The Government welcomes the restoration of an ancient form of Buddhism adaptable to the Soviets' requirements. An association of erudite scholars organized at Leningrad, the Capital of Russia, is expected to form the nucleus of a great seat of Buddhist learning—a Buddhist University of unique nature the like of which is nowhere in the world to be found now. This institution when brought into its working order will consist of four departments each of them being made the source of Buddhist culture which obtains in a particular country. India, China, Japan and Mongolia are the four countries represented by these four departments. The control of them will be vested in the hands of Sanskrit scholars of outstanding repute. No provision has

yet been made it would appear for the study of Pali and the Theravada school of Buddhism.

The Government of Russia has guaranteed to pay all preliminary expenses in connection with this movement and also promised considerable financial support in the future.

Interpretation of Dreams in the Upanishadas

R. Nagaraja Sarma M.A., L.T. writes in the *Indian Educator*, of Madras as follows:

The fourth adhyaaya of the Brihadaranyakopaniṣad is devoted to a discussion of the dreams. The unbridled creative activity of the subject is held responsible for the manufacture of the haldioscopic dream imagery. The realm of the *vasanas* roughly corresponds to the unexplored region of the unconscious. The raw material is freely taken from the vast and almost inexhaustible realm of the unconscious and dream experience is projected or manufactured (4-3-10 P. 331 et seq. Anandasrama edition of the Brihadaranyaka). The following are the outstanding facts that are culled from this Upanishad—(1) Dream experiences are created by the agent from the raw material of the *vasanas*. (2) Two worlds are spoken of—the present world and the other world—the third is inserted between the two like a tertium quid. (3) The figuring of the erotic element in dreams is recognised (4-3-13) (4)

India has not attracted businessmen. No capitalist, whether European or Indian, has taken kindly to it although they have invested very large sums of money in other business such as, sugar, cotton, coal, etc. And why? Because the businessman, when he begins to investigate this question, very soon finds that he has not sufficient protection against the danger of his coming into conflict with milk dealers selling impure and unclean stuff because the public is not discriminating enough to decide between them. This commodity can be so easily adulterated that it is very difficult to protect it from the point of view of purity and it is far too risky to invest any money in the milk business. And this brings into prominence the question of giving adequate protection to *bona fide* pure milk sellers against unfair competition.

There is another reason why the milk business has not yet attracted capital and that is the cattle-breeding policy or rather the want of any policy. Now in India there are innumerable head of cattle and if there had been any cattle breeding policy here, the land would have been over flowing with milk, if not with honey.

It is a remarkable thing that you are paying for your milk which may be pure or which may not be, 25 to 35 per cent more than what we pay for our milk in London although every other commodity there is considerably dearer than in Calcutta. The reasons are (1) want of organization (2) want of public opinion and (3) want of a cattle breeding policy. The bulls that are used here for covering cows are generally selected without any reference to the quality of their milk. Our cows and female buffaloes from the point of view of milk production are going from bad to worse as we have been very careless in the selection of what we call sires. Perhaps you are aware that milk passes through the male line of cattle and it is simply inconceivable to improve the milk yield of our cows unless adequate attention is paid to the selection of stud bulls.

Then Mr. Smith gives us a little bit of history and a valuable suggestion.

I do not think it will be out of place if I give you a little bit of milk history in other countries. In the year 1867 the milk supply in London was no better than that of Calcutta at the present moment. In that year rinderpest broke out in London and it practically destroyed the milk cows of the city. But this outbreak of epidemic was the making of London from the point of view of milk supply. Enterprising dealers started to produce milk on dairy farming system with the result that within a very short time the people found that they had much better and much cheaper milk than what they ever had by an act of God in connection with the rinderpest outbreak which had revolutionised the milk supply of London. This system naturally spread in other cities and practically the large cities in the world the supply of milk comes from the districts from country side dairy farms where animals are housed, fed and kept in a very sanitary condition. The supply of milk for New York comes from a distance of about 300 miles. All large cities in Europe, the United States and the Colonies work under the same system and an adequate supply of pure and cheap milk in Calcutta can only be

ensured by the adoption of the dairy-farming system.

He also answers the question of the feasibility of making arrangements for the milk supply of Cities from a long distance. Says he

Now the question arises how it is possible to bring in milk from long distances in tropical countries. It may be very difficult to do this in India but it is not impossible. It is only a question of ways and means. There can be no doubt that it is possible to bring in milk from a distance of 200 to 300 miles in a perfect condition, if it can be properly treated properly conveyed, and sold immediately on arrival. During the war we used to send pasteurized milk to Bombay from Jubbulpore and that milk we used to sell without repasteurization. There is no doubt that with proper safeguards and with refrigerating vans in railways you can send milk from a distance of 300 miles and sell it in Calcutta in a much better condition than the milk which you get in front of your house through the wandering cow system.

Future of Indian Education

Prof P. Seshadri says in *The Educational Review*

If the Indian educational system was to discharge its highest obligations to the country, the Universities had to be developed immensely, so as to serve as effective centres of higher education comparable to the great Universities of the West. The mere inauguration of new Universities was not a great achievement, unless it was accompanied by the coming in of more efficient educational conditions, better libraries, more high class laboratories, a superior and leisured staff in fact, everything conducive to higher standards of education. The Universities all over India were seriously handicapped by want of funds and found it very hard to embark on new lines of research and development. Lord Lytton's Committee on Indian Students in Great Britain had recommended that the Indian educational system should be made self contained so as to eliminate the need for students to go to Universities in the West. Not much progress had been achieved in the direction. A fictitious value continued to be attached to foreign degrees merely as foreign degrees, by the Government as well as the public and Indian Universities continued to be treated as belonging necessarily to an inferior type. A wave of indignation was passing through the country about the racial discrimination of people in Edinburgh against the colony of Indian students. The proper solution however of the question seemed to him to be that Indians should not wait at the gates of British Universities begging to be taken in and treated without any marks of inferiority, but make their own Universities high-class centres of education and eliminate the exodus altogether, except in very special cases. As no political progress was possible so long as Indians hung to the coat tails of foreigners and looked for wisdom

and guidance from England no educational progress was possible so long as the Indian Universities were not allowed to grow to their full stature and their best products were treated as necessarily inferior to those whose only distinction sometimes seemed to be that they commanded enough money to have a foreign education

A Public School for India

Prof Seshadri continuing his discourse in the same journal criticises the idea of establishing a 'Select' Public School in India. He says

A scheme had recently been launched with a flourish of trumpets for the establishment of a Public School in India one of whose great attractions was announced to be the coming of three Englishmen for running the institution. I confess the idea left me somewhat cold. Its expensiveness made it unsuitable for a poor country like India and it was bound to deteriorate into a school for the children of aristocrats. It would do no good to them to be brought up in such an atmosphere of segregation and they were sure to develop vanity and snobishness which had no useful place in modern democratic life. To those who had absolute faith in the Public School system of education he would commend the recent book of Prof. Bertrand Russell on *Education* where he had many illuminating paragraphs on the subject. At one time it trained hardy people who played an active part in the expansion and government of the empire, dominating over those whom they had conquered but it was futile to foster that spirit in the New Age. The idea of such aristocratic exclusiveness was entirely opposed to the best Indian traditions in accordance with which the scions of princely families in ancient days went to the hermitages of ascetics for education with the poorest Brahmins. One of the most cherished recollections of Sri Krishna who belonged to the royal house of Dwarka, was it will be remembered his companionship with the poor Brahmin child Sudama at school and let us not lose the beautiful idea of equality underlying such companionship. The goddess Saraswati made no distinction in her temple between the high and the low and an institution which in effect, would cater only to those who paid inordinately high fees and considered it a matter of great pride to sit at the feet of Europeans who were fresh from England, can neither react beneficially on the present educational system nor rouse the imagination of Indians. Any available money in the country had better be spent on the strengthening of the existing high schools and let no Indian gentleman however high placed consider it beneath his dignity that his son should rub shoulders with the boys of an ordinary Indian high school and be taught by his own countrymen.

Future of Indian Women

Swami Asbokananda, editor *Prabuddha Bharata* contributes a thoughtful article on

the above subject to the September 1927 number of his journal. He puts the whole question in a nut shell before proceeding to answer it. Says the Swami

To our mind, all the different problems of Indian women are reducible to two fundamental problems (1) What should be her attitude towards physical and intellectual life? That is to say should these be circumscribed within the domestic limits as at present or should she come out of this limited sphere and take her place alongside of man in all departments of life social cultural economic and political? (2) What will be her attitude towards marriage? Must all women marry? And those who would marry what would be the significance of their marriage now? Does it require changes from its present oneness and inexorability? What is the ultimate value of *Sati dharma*? Is the wife to be an unquestioning service and allegiance to the husband without the expectation of any return? Or would it be mere co-partnership involving mutual rights and duties such as married life in the West is tending to be? These are the two fundamental questions. All other problems are but details.

The Swami then points out how radical feminism has its limits in the heart of the woman herself. She may drift impetuously for a while, but her awakening intellect will surely draw her back towards the normal of womanly bliss.

elections from Sri Dharma

The *Sri-Dharma* the official organ of the Women's Indian Association, publishes the following three notes

THE ABOLITION OF THE DEVADASI

The wave of interest in Devadasi abolition is remarkable in South India. The gripping of the subject by the only lady Member of the Legislative Councils in British India seems to have caught the public imagination. If Dr. Muthulakshmi Ammal M.L.C. can abolish the custom of dedicating girls to temples she will be splendidly following in the footsteps of her leader Ram Mohan Roy who was able to abolish the custom of *suttee*, wife-suicide by burning on the funeral pyre of the husband. These customs of the sacrifice of woman to man are not sanctioned in the Vedas or the ancient religious books. Fortunately they are not prevalent equally all over India. The British Government was humane enough and brave enough to make the practice of *suttee* illegal. Many parts of India have no Devadasi custom. Certain Indian States have legally abolished it, amongst which Mysore is pre-eminent. What its religious Hindu Maharajah has done the British Government need not hesitate to do. An end must be put to sanctified vice. The Government must give the order and the Boards for Religious Endowments must find the ways for compensating the Devadasi community for this generation and for starting School and Homes for the young girls

and women who are its victims. Large meetings in the Madras Presidency are calling for the ending of immoral traffic in women and children both as commercialised vice in the ordinary brothels of cities and under the excuse of religious custom with the dancing girls of the temple. The Age of Consent agitation the Devadasi Bill of which Dr Muthulakshmi Ammal has given notice and the Bill for the Suppression of Immoral Traffic are three facets of one evil. They all arise from the fallacy that there can be one standard of morality for men and another for women. Nothing short of a single standard of morality should be the principle of all our work in these sex questions.

FOLLOW UP OTHER PROVINCES

The example of the women of Madras is worthy of being followed by the women of other Provinces also. At the beginning of the autumn season a large women's meeting was called in Madras under the auspices of combined Women's Associations, and Resolutions were passed stating what reforms women wanted in the Presidency concerning Health, Social Reform, Educational Reform, and Labour conditions. Various groups of the women who organised this meeting have been waiting on each of the authorities in charge of these subjects such as the Secretary General, the First Minister who has the portfolio of Education and the Minister of Health and valuable interchanges of ideas and information were the result.

SIR SANKARAN NAIR AND THE WOMEN'S MOVEMENT

There is no country in the world where women

have so many rights and in which they can be so free as in Malabar the strip of country on the West Coast of South India. It still remains a *Matrarchate*. The law of inheritance is all in women's favour, the woman chooses the husband, she can divorce him at will and marry again. There is no child marriage in that country nor purdah and the percentage of education is the highest in India, as also is the general physique. It is notable that it is from this country that two of the best champions of the women's cause in India have come namely the Hon. Sir Sankaran Nair and Dewan Bahadur M. Krishnan Nair. The latter piloted the Resolutions in the Madras Legislative Council which gave the vote and the right to sit in the Council to Madras women. The former has been advocating the equality of women and men all his life but recently has excelled himself in advancing the cause of the progress of women by his address at the Convocation of the Indian Women's University and a speech at a public meeting in Madras advocating economic independence for women through just inheritance laws and educational facilities and supporting Dr Muthulakshmi Ammal's Bill to end the Devadasi system and urging to bring about a single standard of sex morality.

Sir Dharma does a creditable share in acting as a broadcasting medium for news about the women's movement in India to other countries as it has Exchanges with almost all important feminist papers in English and French. Thus are the bonds of international sisterhood forged but we do need funds in India for a big Publicity Organisation.

FOREIGN PERIODICALS

Murder or Punishment ?

The Sacco Vanzetti Case protracted over a dreary seven years of slow torture for the accused men and ending in their execution has something of the medieval vengeance of the Law about it. It rouses in our heart half forgotten and dreadful memories of days when condemned men saw the faint flash of the rising sun on some fatal morning after passing fifteen or twenty years in an underground dungeon preliminary to being tied packed and weighted in a sack and pushed over from a precipice into the depths of dark surging waves a hundred or more feet below. Whether Sacco and Vanzetti were guilty or not matters little for no one can deny that they were made to suffer worse tortures through their fair trial than befall the average low down

human beast who murders a lonely widow in her bed in order to get away with her slender savings. The *Literary Digest* gives the place of honour to a discussion of this case in their issue of September 3. We are told in the opening words of the discussion

With the execution of Nicola Sacco and Bartolomeo Vanzetti newspaper discussion of the case did not cease but the angle of approach changed. Instead of arguing about reprieves and motions and pardons instead of debating how the men's lives could be saved or whether they ought to be saved editors began to talk about the permanent lessons to be drawn from a criminal case which has attracted more world wide interest than anything of the kind since the famous Dreyfus affair. Believers in the innocence of the two Italians who were executed on August 23 seven years after they were first apprehended and after the exhaustion of every legal means of review and delay turn to consider how such things may be avoided in the future. Those thoroughly convinced that Sacco and Vanzetti

were guilty and justly executed protest against the long delay. The judicial system of Massachusetts comes in for severe criticism, although stoutly upheld by some Massachusetts papers. The world wide epidemic of radical demonstrations leads many a conservative editor to use the Sacco-Vanzetti case as a text for a discourse upon the possibility of closing our gates still tighter against the alien Red. The debate spreads over the world, with foreign editors freely descanting upon what seem to them to be imperfections of American justice and our own press in reply instructing them about our Constitution or suggesting that we can take care of our own criminal cases without any advice from abroad.

Some American Papers are supporting the Sacco Vanzetti execution with that vehemence which one normally connects with the rationalisation of one's own crimes or of those of one's kith and kin. Others are a little more open minded. For example

No one, insists the *Albany Amherstbocker Press* "will maintain that seven year old justice is an ornament to a State. From across our Northern border the Kingston (Ont.) *Wing Standard* says that the real tragedy of the Sacco-Vanzetti case is not that the men have now been put to death but rather that they were not put to death long ago once their guilt was established in a court of justice," and it might be said here that the commonest reproach from editors and public men in foreign countries has been that Sacco and Vanzetti were kept for seven years in the shadow of the death-house. Such conditions says that conservative daily the *London Morning Post* turn the law into an instrument of torture.

The *Nation* is strong in its condemnation of the whole affair. In an editorial the *Nation* says

Massachusetts has triumphantly killed an Italian fishmonger and an Italian cobbler, but she has blackened the name of the United States across all the seas."

The Sacco-Vanzetti case has lowered America in the eye of the world, for who would expect a truly great nation to mete out such crude 'justice.' The case rhymes well with the other glories of America, e.g. lynching, colour-prejudice, criminality etc. A consolidated press correspondent in Washington writes

Secretary Kellogg does not consider the labor demonstrations in the capitals of Europe as necessarily representative of universal opinion in these countries but cabled protests by such people as Madame Curie, Fridtjof Nansen, President Masaryk of Czechoslovakia, Professor Einstein, Marquis Ouy de Lasteyre, the grandson of Lafayette, Louis Loucheur, Joseph Caillaux and Alfred Dreyfus make it evident that the upper and middle classes of Europe on this occasion stand with the working classes.

"Nor can be ignored the fact that the Paris newspapers, radical and conservative alike devoted columns of space to the fight of the two men."

The same correspondent reminds us that general strikes were called and were partially successful in Paraguay, Uruguay, and Argentina, that there were notable demonstrations in Panama, Morocco and Geneva, that London newspapers voiced regret over the general outcome, and that in Germany a group of twelve prominent lawyers issued a statement protesting against the execution of a death sentence after seven years' delay. A Paris correspondent of the *Chicago Daily News* referring to reports of violence or attempted violence in Copenhagen, Stockholm, Amsterdam, Sydney, Bucharest, Montevideo, Prague, Berlin, Athens, and many other cities, declares that such united feeling throughout the bulk of Europe against something American has never occurred before. In Italy, the native land of Sacco and Vanzetti papers used phrases like hideous mafia, tyrdom. Not since the the Dreyfus case declares *The Saturday Review*, in London, has opinion been so moved and shocked by a public trial.

One explanation of this clamor comes from the *New York Evening Post* which remarks that

Europe, already disliking us as a relentless creditor now has what seems to be an excuse to burst into a flame of righteous indignation against Uncle Sam as a blood stained monster, not merely avaricious but murderous.

open the eyes of the those Indian Moslems who still think of Turkey as a stronghold of Islam and of Kemal Pasha as a probable ally of Mr. Mahammad Ali.

In the *Petit Parisien* a special correspondent at Angora quotes the Turkish Minister of Foreign Affairs, Tweek Rıhdi Bey as giving the following intimations of Turkish policy:

"All this talk about the union of the Asiatic peoples is pure imagination. We have nothing to gain from it. What have we in common with the Asiatic peoples? Religion? But we have abandoned it. We are not Moslems. We are Turks. The language? There are no less than forty six languages among the Asiatic races. In Europe we consider as brothers the Hungarians and the Finns. Ties of friendship? The Persians have always been against us. On history shows that for years we had a series of wars with Persia. The other Asiatic races? They are too far away. In case of trouble what could the inhabitants of Afghanistan, or of India or of China do to help us? For all these reasons we are in favor of a return to Europe.

Greek newspapers which follow Turkey's policy rather closely notice considerable activity on the part of Angora to bring about alliances with Italy or Rumania, or even Bulgaria. Rumors of an Italian alliance with Turkey are too vague and too indefinite and so may be dismissed for the present in the opinion of the Athens *Neos* but it attaches particular importance to the possibility of a Turkish Jugoslav alliance. A common enemy brings about the closest friendships says the *Empire*, in noting that both Turkey and Rumania have recently agreed that Fascist Italy constitutes the most serious danger to Jugoslav interests in the Adriatic and to Turkish interests in Asia Minor and it adds:

"For Turkey a rapprochement with Rumania would be more than useful. Altho the possibility of a Jugoslav participation in a war involving Italy and Turkey would be rather remote Turkey would expect to profit by concluding an alliance with a Balkan State because by that fact she would emerge from her present isolation and incidentally add her weight to the French-Jugoslav group which today opposes Anglo-Italian policy in the Mediterranean.

A Great Inventor's Belief

In the same journal we find the following:

Declaring that his Belief in a Creator is justified by the facts of science, Michael Pupin noted inventor and professor at Columbia University describes in the August *Scribner's Magazine* the direction of his religious thought since he secured his first employment in a factory in New York fifty two years ago. "It taught me that the fire under the boiler supplies the driving power to every machine in the factory," he writes. "To an untutored Serbian immigrant who had never seen such things in his native village that was awe-inspiring knowledge and it thrilled me. It stirred my emotions and my imagination and I almost became a fire-worshiper. Dr. H. Poincaré then points out other

facts which he discovered during the following half century and sums up his philosophy in these words:

The smooth and steady motion of the piston in the boiler room assisting the trained hand of man in the factory, the roaring furnace flames in the foundry announcing the birth of beautiful castings, the radiating chaos of our central star the sun sustaining the ceaseless terrestrial cycles of co-ordinated energy, movement, the messages transmitted to man by the galaxy of stars proclaiming the lavish expenditure of their inexhaustible store of energy as a preparation for higher forms of creation, all of them tell the same joyous story which Tyndall first told me fifty years ago the story of transformation of the primordial chaos into a cosmos, a universe of beautiful law and order. This is also the story of the universe of organic life. The truth which this story reveals was recognized intuitively by man since the very beginning of civilization and guided by the power of his creative soul he began to dream of a social cosmos which makes life worth living. The awakening from this beautiful dream is the birth of Church and State, guided by the love of God and of fellow man these social co-ordinators will certainly give us a social cosmos, the realization of the highest aspiration of the human soul.

From this point of view science, religion, and the fine arts as expressions of the intellectual, spiritual and aesthetic co-ordination of the creative power of the human soul are three inseparable parts of a single science, the Science of Creative Co-ordination.

U S America's Interest in Latin America

The *Current History* of September is the Latin America Number. The U.S.A. is finding it increasingly difficult to get round and exploit with ease the Latin American lands. Every effort, lawful and otherwise is made to keep Latin American countries well in hand but the 70,000,000 of these hot blooded republics are becoming more and more of a handful to the U.S.A. In order to understand the real situation we should know the true nature of the U.S.A.'s interest in Latin America. The *Current History* tells us:

On Dec. 31, 1922, the Department of Commerce estimated that the total investments of the United States in Latin America amounted to \$4,240,000,000. Of this amount \$10,000,000 was in Government guaranteed obligations and \$3,330,000,000 in industrial and other private securities. During 1916 about \$1,000,000,000 additional foreign investments were bought by United States citizens, and of this amount \$34,959,000 went to Latin America. About \$8,000,000 of the 1916 investments went to private industrial and commercial corporations. The remainder was borrowed by national Governments, States or Municipalities and was largely destined for the construction of railways, highways or other public works. A more recent estimate by the Department of Com-

merce (June 30 1927) placed our Latin American investments at \$1 800 000 000

Is Lynching Dying Out ?

The following paragraphs taken from *The World Tomorrow* point out how there is some chance that the American sport of Lynching will go out of fashion in the near future

According to the records compiled at Tuskegee Institute in the Department of Records and Research in the first six months of 1927 there were 9 lynchings. This number is the same as for the first six months of the years 1925 and 1926 it is 4 more than the number 5 for the first six months of 1924 6 less than the number 15 for the first six months of 1923 21 less than the number 30 for the first six months of 1922 and 27 less than the number 36 for the first six months of 1921. All of the persons lynched were Negroes. The offenses charged were murder 4 attempted murder 2 rape 1 improper conduct 1 charge not reported 1. The states in which lynchings occurred and the number in each state are Arkansas 2 Louisiana 1 Mississippi 4 Missouri 1 Texas 1.

The National Association for the Advancement of Colored People announces that there is a steadily growing expression of sentiment in the South that tends to make lynching a disreputable sport. More and more the influential agencies of the white South are putting the stamp of the disapproval on lynching and mob violence. This fact can be contrasted with 20 years ago before the Association began its propaganda and expose of lynching. At that time editors preachers politicians and even government officials either condoned or justified lynching. The Association now has in its possession evidence that most Southern editors of the larger newspapers as well as government officials a few politicians and some preachers are openly opposing lynching.

The Vienna Riots

The recent riots at Vienna were unparalleled in their fury and passion. The *New Republic* in a special article throws considerable light on the unseen social forces that caused the riots. We are first told

On July 14 1927 while Paris was gaily celebrating the one hundred and thirty eighth anniversary of the storming of the Bastille tens of thousands of workmen grimly attacked the Ministry of Justice in Vienna setting fire to the building in which it was housed. For three days the capital of the Austrian republic was swept by riots. Police quarters were wrecked scores were killed in street clashes hundreds were wounded. A general strike paralyzed the entire life of the Danubian state.

The immediate cause of the sudden and fierce outbreak of mass violence in Vienna was it quit

tal in court of three Austrian Fascists who are generally believed to be guilty of the assassination of a Republican guard and his child several months ago. This verdict was one of a long series of similar judgments pronounced in the courts of the Republic Austria by Pan German Nationalist and Royalist judges who still retain their old offices in spite of the Revolution of 1918. The extraordinary vehemence of the popular protest however, amply indicates the existence of deeply smoldering fires of unrest in the hearts of the usually complacent and pacific people of Austria. The assault on the Ministry of Justice is but symptomatic of the state of smoldering revolt into which the Austrian masses have been driven by the stabilizers of present day Europe.

The reasons why the masses rose in revolt are explained as originating in the present anomalous structure of Austrian economy. We learn

If the defunct Austro-Hungarian Empire was a political and cultural absurdity the new Austrian Republic is an economic absurdity. The old empire was a crazy quilt of divergent national groups held together by cohesive economic factors making for industrial unity and prosperity. The new state reduced to one eighth of its area and population is like a head severed from its body miraculously kept alive by the financial oxygen administered under the auspices of the League of Nations.

Austria with its 6 500 000 people was the nerve center of the dismembered empire of 51 000 000. It drew grain from Hungary coal and iron from what is now Czechoslovakia and sent them in return manufactured goods. Economically speaking the Dual Monarchy was a free customs union an embryonic United States.

The Treaty of St. Germain however was an instrument of selfish and blind politics. It was conceived with the Little Entente in view as a make-weight for a new balance of power for France in Central Europe. It disregarded the vital interests of a huge population. It disregarded the vital interests of a huge population. It resulted in a monstrous system of arbitrary tariff barriers which clogged the delicate economic arteries developed during a century of industrial and commercial expansion. It deprived a great and thriving area of its only first class outlet to the sea, turning Trieste over to Italy which needed no additional access to the sea.

Today Austria is the most anomalous state in Europe. Enveloped on three sides by a ring of unfriendly countries suffering from chronic unemployment, forced to import her raw materials from across the near borders and to face prohibitive customs in her exports she is naturally a fertile soil for national and international trouble.

And the people of Austria who have been so unjustly and stupidly detached from their economic setting are largely socialistic in politics.

Austria boasts the strongest Socialist party in the world in proportion to population. In the recent elections held three months ago the Socialists polled in the entire country 1 336 000 votes.

nearly 43 percent of the total national vote, an increase of 225,000 as compared with 1923. In Vienna alone with a population of 2,000,000 the Socialists polled 694,000 votes more than 62 percent of the entire city vote. At the same time, the Communists polled only 13,000 votes in all of Austria, which was half of their strength in 1923. The Communists in Austria, therefore form less than 1 percent of the Socialist rank and file.

Not Bolsheviks, but, nevertheless bad workmen for greedy capitalists to exploit. The Austrian Socialists, are not only a menace to Austrian capitalism, but they provide in their united numbers a solid opposition to reactionaries in the surrounding countries also. For

There is no danger of a Communist coup in Austria, but there is danger that the Socialists by their constructive achievements will ultimately take over the Republic not only politically but economically and socially. It is Austrian Socialism which stands in the way of all *putschists* by its championship of a Balkan federation, and by its accomplishments in the field of social reform in Vienna, which it controls.

And they are not bad Socialists either in anyway, although they mean some amount of discomfiture to capitalists. We are informed

Where is there another city in the Old World in which in the course of the last five years 2,000 homes have been built for the workingman? This is the record of the Socialist administration of Vienna. The child welfare work conducted by the Socialist municipality is unequalled anywhere in Europe. The infant mortality has been reduced from 16 percent before the War to 8 percent by the Red' guardians. Tuberculosis, so prevalent under the Empire has dropped considerably.

But it was the taxation policy of the Socialist municipality that aroused the fierce opposition of the reactionary groups. In Vienna, 791 capitalists are paying annually to the city a combined tax equivalent to the total contributed by the other 490,000 tax payers who form the balance of the population. Isnt this rank Bolshevism? But it is Bolshevism of a new kind. It makes a potent appeal to the workman as well as to the middle class. It makes life bearable in a colossal industrial city with a pitifully small hinterland. In a word it creates some sort of an internal equilibrium in a body, externally suspended by the arbiters of St. Germain.

The reactionaries in and outside Austria, therefore, do not cherish any gentle feelings towards these radicals. So that

Helpless in the face of the deeply rooted Socialist power the reactionaries have had but one reply to make namely violence. Entrenched in the judiciary the old imperial bureaucracy has been working hand in hand with the Fascist terrorists washing the bloody hands of the assassins of the defenders of the Republic. The rioters in Vienna were not the aggressors. They merely struck a telling counter-blow. The intensity of their out

burst only testifies to the fundamental mass craving for justice. The storming of the Ministry of Justice in Vienna was prompted by the same popular passion that caused the storming of the Bastille in Paris. Whatever may have become of Equality and Fraternity since the French Revolution Justice still remains the untarnished standard of any civilized and humanitarian system of government. If the Austrian masses have given vent to their outraged feelings in such a revolutionary fashion it is perhaps partly due to the failure of their leaders to replace the retrograde judiciary with a new code and apparatus of justice. At the same time the action of the masses serves as an ominous warning to the agents of Horthy, Ludendorff and Mussolini that Socialist Austria will no longer brook their plots and murders and will not stop at taking over the helm of the state should they persist in their policies of special privilege and their intrigues in the dark field of Balkan politics.

Americans use Torture on Accused Persons

We learn from the *New Republic*

A Short time ago a man named Ludwig Lee was arrested in New York City charged with the murder of two elderly women. Lee claims that extraordinary methods were used by the police to force a confession from him. He says he was beaten until two ribs were broken and his body was a mass of huge bruises. Some of his hair was pulled out, his legs and arms were twisted causing excruciating torture. He was kept without sleep and almost constantly questioned, for the better part of four days and nights. His attorney, believing not unnaturally that this sort of brutality, if proved would be an important element in his trial when it takes place next October has sought to have Lee examined in his cell by a physician and photographs taken of his bruises (which, obviously will have disappeared in the course of a short time). Both these requests the police have denied. The attorney sought successively in three courts for an order overruling the police, but in vain. Lee was born in Norway and the Norwegian Legation finally appealed to the State Department, which in turn has asked Governor Smith to look into the case. We trust he will find that his investigation will not end until he has found out the whole truth about police methods. Only a short time before Lee was arrested a New York attorney declared in court that torture is habitually used by the New York police in the effort to extort confessions from prisoners. There is not another civilized country in the world which would tolerate such practices and if they exist here it is high time they were stamped out.

The police of the most civilized nation in the world should not, then, let their country down.

Discovery of Rare Buddhist Transcript

The *British Buddhist* furnishes us with the following information —

It is a well known fact among Buddhist scholars that when Hsuen Tsang returned to China after a

wholly foreign to the teaching of the Buddha and are more or less obnoxious to the modern mind. Such are the doctrines of heaven and hell, future punishments and rewards which are quite alien to primitive Buddhism and are to the advanced scientific thinkers mere outgrowth of superstition, animism and fear. The Buddhist priests ignorantly preach such absurdities and regard them as a part of their religion. About the real Buddhism they know practically nothing.

The second great defect in present day Buddhism is monasticism. This has been one of its great curses and a source of weakness. It was one of the most important causes of its disappearance from the land of its birth. Monasticism has been a great evil from which human society has suffered. It draws away men and women often of keen intelligence from active life, deprives society of their services and thus seriously hinders its progress and development. It breeds a class of parasites which subsists on the produce of others and leads to corruption in morals and decency. Such has been the case with Christian Mohammedan Hindu and Buddhist monasticism. In Protestant Christian countries it is now almost abolished and the monks and nuns are deprived of their rights and privileges. But in Catholic Christian countries it still persists and is an enormous obstacle in the path of their progress. Turkey has swept the whole monkish system and by a single stroke of the pen has abolished the dervish orders. But the Buddhists have yet shown no signs of doing away with this evil and no voice of protest is raised against it. In Tibet monks and nuns are said to be two-thirds of the population. Immorality and corruption is rife among them. In China, Burma, and in all the Buddhist countries their number is considerable and they are proving to be a great economic burden on society. Monasticism must be abolished if Buddhism has to hold its own against the onslaughts of industrial civilization.

The third serious evil which is prevalent in Buddhism and calls for radical reform is idolatry. It is a shame that in all the Buddhist countries images of Buddha are worshipped and idols are placed in Buddhist temples which receive the homage of believers. Buddha never wished that his followers should deify him and worship his name. I of course do not mean that Buddhists are more idolatrous than the followers of other religions. Mohammedans bow before the tombs of Mohammed and their saints, the Christians have their idols of Mary and the Hindus worship numerous images personifying One Supreme Being. Even the worship of God to the Buddhists is it to the Western freethinkers is a mere idolatry for to them God is an outgrowth of animism, superstition and fear. God according to them, has no absolute existence whatever and is a mere psychological illusion. Only the ignorance of man has invented a divine Creator. No trace of him can be found in the realm of experience. No revelation of senses and science reveals his existence. According to this view Buddhists are far less idolatrous than the members of other religions. They worship Buddha, who consecrated his whole life to the service of humanity and to the rationalistic investigation of truth, rescued mankind from the trammels of error and guilt,

and proclaimed the most advanced system of ethics which the world has ever seen.

This idolatry is thus not akin to the idolatry which finds God or the creator or dispenser of human sorrows and joys in an image. Even great thinkers have bowed down to the Buddha.

Philosophers and poets like Schopenhauer and Kinkel worshipped at his shrine. The former went so far in his devotion to the Prince-Philosopher that he kept his big statue on the table and looked at it with almost superstitious reverence.

Even then one cannot support this attitude. We are reminded

As idolatry is essentially un-Buddhist and is looked down upon by advanced thinkers it must be abolished and Buddhism must be extricated from its corrupting influence.

Then we are told

The fourth great and the most dangerous defect of Buddhism is its ahimsaism. This fatal and demoralizing doctrine has emasculated the Indian people and has reduced them to the present condition of servitude and slavery. Though there were other causes which made India a prey to foreign invaders it was this mischievous cult of non killing which contributed most to her downfall. It killed the military virtues and undermined the fighting spirit of the Indian people.

We are also asked to reconsider the value of Ahimsa in the light of the following

What would have happened had Japan practised ahimsa in her dealings with the Western Powers? She would certainly have lost her independence and could not have occupied the proud position in the councils of the nations which she is enjoying today. It was sword that brought the haughty Czar to his reason and checked the tide of European imperialism. It is physical force that counts most in international politics. There is nothing in this world but centres of force in constant evolution in unceasing action and reaction on each other. The will to power to ever increasing power and to subject to its dominion an ever increasing energy is the fundamental fact of the life of the universe. The doctrine of ahimsa is wholly opposed to the teaching of the theory of evolution.

What China can be Industrially?

The following quotations are from the *China Journal*

Under the title "To-day and To-morrow" Henry Ford has written a book which it would be well for every commercial man, manufacturer, employer of labour, politician and diplomat, native or foreign in China to read. It tells of the founding and development of what is one of the world's greatest individual business, the manufacturing of the Ford car. It does much more than this. It

sojourn in India for fourteen years he pursued the propagation of the teachings embodied in Abhidharma-kosa and Vyākṛanta-mātrā the former representing realistic and the latter idealistic Buddhism. Both are the works of Vasubandhu a great philosopher of the Mahayana school. The former was written before the author embraced Mahayana Buddhism so that it is a work belonging to the Hinayana School. Nevertheless it is a work students of Buddhism must study before all others as it forms the basis of all Buddhist knowledge. On his return to China Hsien Tsang translated it into Chinese and taught it to his disciples who took down notes of his lectures. Two or three kinds of such notes are preserved in Japan. Shortly after a scholar of the name of Yen hui wrote a commentary on the Abhidharma-kosa. The book is entitled Ju sho and consists of thirty volumes. It is well known that during the 9th century a Japanese priest, Chisho brought back the book from China. Of the thirty volumes of the book twenty nine have hitherto been in wide use but the last volume was unknown and it was supposed that it never saw light the author Yen hui finding it too much for him to write a commentary on the last chapter on Puṅgalaviniśaya.

In this circumstance, it is a most interesting fact that a transcript of this last volume was recently discovered among ancient books preserved in the Todaiji temple at Nara. It is not one that was imported into this country by the priest Chisho but is of a comparatively later period being one copied in the 14th century. Nonetheless the discovery of this book is of great interest and has caused a great sensation in the circle of Buddhist scholars. It will be included in Dr Takakusu's Taisho edition of the Tripitaka. The discoverer is the Rev Gion Boshimoto abbot of the Yakushiji Temple. That similar valuable discoveries are made in Japan one after another may be taken as a sign of the great zeal with which Japanese scholars of Buddhism are carrying on their study.

Buddhism in Korea and Japan

We find the following in the same journal

Various signs are manifesting themselves in Korea showing that Buddhism which sank to the lowest depth of decadence and inactivity under oppression of the Yi Dynasty has lately begun to revive and be a power for good. One of these is the formation of a powerful body some years ago of Japanese and Korean Buddhist priests and believers. This organisation is called Chosen Bukkyo Dan (Chosen Buddhist Association) and has its headquarters established in Hasegawa-chō Keijo (Seoul). Among several good enterprises it carries on is the task of yearly sending Korean students to Buddhist schools and colleges in Japan. This work was started in 1915 when five were sent and eight the following year. It has been decided to send six this year four to Kyoto and two to Tokyo. All of the selected are graduates from higher common schools. When these students finish their study in Japan and go home it is hoped that Buddhism in Korea will have fresh blood infused in it and will make further vigorous steps towards revival.

The same journal also informs us

A large number of scholars and artists gathered in the auditorium of the Tokyo School of Fine Arts on April 11th to pay respects to the memory of Shotoku Taishi the first Imperial Prince to take up Buddhism some 1300 years ago. The meeting which was held under the auspices of the Association for the Worship of Shotoku Taishi was attended by Prince Kuni honorary president of the association and Princess Kuni Mr Saeki Chief Priest of the Horyu Temple in Nara a temple which was built by Shotoku Taishi performed rituals and those present burned incense at the altar raised before a wooden image of the prince. Students of the Hinode Girls School in Meguro were present and sang a song composed for the occasion.

An Army Order of Eighty Years Ago

The *Inquirer* reproduces the following paragraph from its own issue of December 6 1845. From it we learn the attitude of Army authorities towards smoking in mess-rooms and generally in those days

In a general order issued by command of the Duke of Wellington to the many gymnastic exercises wrestling and boxing after mess dinners are directed to be discontinued and smoking is ordered to be prevented. The order on smoking is as follows. The Commander in chief has been informed that the practice of smoking by the use of pipes cigars, or cheroots has become prevalent among the officers of the army which is not only in itself a species of intoxication occasioned by the fumes of tobacco but undoubtedly occasions drinking and tippling by those who acquire the habit and he entreats officers commanding regiments to prevent smoking in the mess rooms of their several regiments and in the adjoining apartments and to discourage the practice among the officers of junior rank in their regiments.

A Plea for Buddhist Reform

The *Young East* publishes an impassioned plea for reform in the world of Buddhism. Buddhism has many defects we are told and we are quoting from the text of the article to show what the defects are supposed to consist in.

The first and the most serious defect in present-day Buddhism is the character and the ignorance of its priests. With the exception of a few brilliant cultured and energetic men they are unquestionably the most ignorant superstitious and passive creatures on the face of the earth. The vast majority of the Buddhist priests know nothing about the history of their religion its principles, the philosophical postulates on which it is essentially based and rests, and cling to beliefs

occasion to extol the purdah system as enjoined by the Quran. The *Review* says

We remember to have read, some time ago the remark of a man that he would retire to the desert as a hermit if women's skirts became one inch shorter. Now we learn from the *Daily Express* that Mme. Tanya Bogdaroff tried to commit suicide in Venice because huge admiring crowds followed her in the streets. She is too beautiful to live.

Such incidents however small and rare they might be are no doubt very significant. Every thing that happens in the world does not find its way to the Press. So we cannot say how much the human heart suffers for the violation of the principles of Islam. Islam says women should not display their bodies and ornaments except what cannot be helped and that they should cover up their necks, heads and faces. Men and women according to the Holy Quran should cast down their eyes. This will be a source of great purity for them. Most of the social evils will disappear if people act upon Islam.

Comments are hardly necessary on the above words of Islamic wisdom.

Work Done by Japanese Red Cross

The *Japan Magazine* gives the following summary of work done by the Japanese Red Cross in the year 1926

Hospitals of the Japan Red Cross Society including the two newly established last year number twenty three, with 4325 beds 38 more than during the preceding year. The actual number of patients treated in all these hospitals was

47289 in patients, the aggregate number of which was 1196345 and 1220496 out patients the aggregate number of which was 3511035 last year. Of these less than 10 per cent. of the in patients were treated free while more than 10 per cent. of the out patients were free. Compared with patients treated in 1925 there was an increase of 93798 in patients and 243133 out patients in aggregate number.

Eight relief houses in Manchuria treated last year 199 in patients their aggregate being 3338 and 13760 out patients the aggregate of which was 65229. To these are to be added 83250 patients treated at subrelief houses and 73701 treated by circuit relief corps. There were 26 cases of flood fires and other calamities for which extraordinary contingents were despatched by the Society the number of patients being 10696.

In the work of preventing and stamping out tuberculosis 1077 patients were taken in while 9360 out patients were treated. There were 2059 in patients and 5828 out patients of pregnant and lying in women.

Mention should be made of the distribution of relief boxes the installation of disinfecting stations and the work of children's hygiene consultation offices sea side schools nurse training schools and special courses in nursing all of which have made contribution to the relief undertaking of Japan.

The Japan Red Cross Society rendered great service in the relief of Chinese wounded and sick last year. In the autumn of 1925 a revolt broke out in Shantung Province. The Society sent a relief fund amounting to 3000 yen to the Tsunan Hospital under the management of the Doumukai Society of Japan. The Tsunan Hospital was entrusted by the Japan Red Cross with attending to wounded and sick and it started the treatment of patients in December 1925. The relief work was ended in June 1926. During that period 3607 in patients and 2349 out patients were treated.

INDIA'S WOMANHOOD

News and Portraits

The flood havoocks of hathiawar and Gujarat have enlisted wide sympathies where in India. The premier Bengal footballers—the *Mohunbagan* team—went all the way from Bengal to Bombay at the request of flood relief organisations, to play charity matches. These games attracted large spectators and funds thus realised were distributed amongst the sufferers. Elsewhere we reproduce a photograph of a group of ladies some of whom happen to be Bengali ladies, seen collecting funds for flood sufferers at the football grounds when a match was being played between the *Mohunbagan* and the *Cheshires*.

Indian ladies have been evincing considerable interest in the sphere of administration

Miss B. E. Engineer

explains the principles upon which this immense industry has been founded and built up and applies the lessons of those principles to every day life and work to our present social and industrial being and to the future of the human family and what he says is so sane and logical that one can hardly refrain from wishing that the whole industrial world were reduced to the state of a Ford manufacturing plant. He lifts industrialism from its former profits-squeezing level to the sphere of a high social system amounting almost to a religion. The principles he enunciates may be summed up in the few words *public service and mechanical and human efficiency*. The two latter are secured by the elimination of all waste in time labour and material and in the establishment of a high minimum wage. Service is rendered the public by the return of profits into the business with a view to the improvement and reduction of the price of the article produced.

The story of the manufacture of a present day car from the mining of the ore to the delivery of the car to the purchaser reads like a fairy tale. Once the ore starts to be moved it never stops till it has been transformed into a car and delivered to its final destination. It is loaded into the company's steamers carried to the smelting plant, smelted, turned into steel, melted, rolled, pressed out, or stamped into various parts of the machine, which in turn is assembled while on the move, non-steel parts similarly created on the run being added the whole tested still while on the move, pressed out of the workshops to the free car or hold of a steamer and delivered to the agent or purchaser and all this in a period of from three to five days. The whole thing is done by machinery supervised by willing workmen. Wherever it is possible to eliminate human labour this is done yet the company finds employment for hundreds of thousands of people to none of whom does it pay a wage less than \$6.00 a day. The company owns and operates its own forests, mines, railways, steamers, flax farms and quarries; it maintains a thoroughly up-to-date and well equipped scientific research laboratory; it sells such by-products from its various plants as it cannot use—and all in the interests of economy and efficiency. The whole organization from mines and forests to the finishing rooms is a huge and perfect machine worth hundreds of millions of dollars employing hundreds of thousands of workmen covering an area of tens of thousands of acres and turning out some two million cars a year.

for the manufacture of fabrics can be grown in the country.

The only thing that stands in the way of an industrial development in every direction in China that might make even the Ford car industry look small is bad government and its concomitants—internal strife, civil war, unjust taxation and the moral and physical degradation of the people.

Of course capital is needed and lots of it. There is plenty of capital in the world waiting to be put to use but before it can be made available for the industrial development of China, peace must come, good government, just taxation and the safeguarding of the investor's interests. Whether this can be brought about out of the present chaotic conditions in China remains to be seen. We feel sure that it can but it will call for a high sense of duty and a willingness to sacrifice personal interests on the part of those in high places for those of the country and the people that is none too common in the world to-day. If the rulers of China to-day those who have the reins of power in their hands wish it, they can stop the present insensate warfare and set the country on a course of industrial prosperity such as the world has never before seen. Their great opportunity is here—how will they act?

The above words are equally true of India. Only we have a further, and almost insurmountable, obstruction in the fact that our political rulers are also our industrial exploiters, and if we progress industrially the chances are that we would have to yield three quarters of the fruits of our achievement to those who hold the reins of our capital legislation, taxation and education.

The Anglo-Russian Struggle The Modern World says

Paleontologists tell us that the struggle between the herbivorous and carnivorous dinosaurs raged for nearly half a million years. Earth was not large enough for both species. The carnivorous dinosaurs passed from the scene.

It appears that earth is not large enough for the two great social systems now in being—capitalism and communism. England is obviously determined to join the issue as vigorously and promptly as may be. Hope for peaceful solution of this conflict constantly diminishes.

We talk of all the manifestations of peace but there are many subterranean indications that the world may all too soon find itself again engulfed in a war resulting from England's grim determination to save her empire, at the price be what it may.

Islam finds Support in attempted Suicide of Woman

An insane woman in Venice has given the *Review of Religions*, an Islamic paper,

occasion to extol the purdah system as enjoined by the Quran. The *Review* says

We remember to have read, some time ago the remark of a man that he would retire to the desert as a hermit if women's skirts became one inch shorter. Now we learn from the "Daily Express" that Mme. Tanya Bogdaroff tried to commit suicide in Venice because huge admiring crowds followed her in the streets. She is too beautiful to live.

Such incidents however small and rare they might be are no doubt very significant. Every thing that happens in the world does not find its way to the Press. and Orissa has just been nominated as a fellow of the Patna University. Miss Das is a wellknown public worker of the province

Miss Shailabala Das

—being a Commissioner of the Patna Municipality and an Hon'ble Magistrate Srimati Nayana Devi is another lady student of that province is shortly proceeding to England having obtained a State scholarship. She is the first Biharee lady to receive this high distinction. It is reported that Srimati Nayana will represent India at the forthcoming session of the International Women's Conference. Mention must be made in this connection of Mrs. K. Kristinavenamma, Municipal Commissioner Coimbatore and Secretary of the Coimbatore Red Cross Society who has been elected President of the District Educational Council, East Godavari (Madras) and of Miss P. Chellamma of Travancore who has recently passed the *Viduan* examination conducted by the University of Madras. She attained high proficiency in Sanskrit and Malayalam. Miss Kusum Jayavant who secured *first class first* in B.A. Examination of the Nagpur University and left for England last month as a C.P. Government Scholar for higher studies abroad.

Miss Kumuda Khopkar M.A., B.S. who recently passed with distinction the final Medical Examination of the Bombay University hails from Baroda and is the first girl in the state to pass that examination. She aspires to go abroad provided she secures a scholarship from the Baroda Government.

Miss Nilima Thakore B.A. one of the batch of Gujarati girls who Graduated in Arts this year is the grand daughter of Sir Chimanlal Setalvad who has the good fortune to see third generation in his family to graduate from the University of which he is the Vice Chancellor.

In civic activities the ladies of Bombay have made much progress. Mrs. Sarojini Naidu, Mrs. Avantibai Gokhale and Miss Bachuben Lotwala a Gujarati lady, were the first batch of Bombay ladies to enter the field of civic administration of Bombay. Miss Lotwala has been serving on the Municipal Corporation (Bombay) for two successive terms (5 years). She recently returned from

Dr. Miss Kumuda Khopkar

Europe where she had been for a holiday and had the advantage of seeing personally the working of most advanced parliamentary

and civic institutions of Europe in the company of her father the Hon Mr Patel President, Indian Legislative Assembly

THE VOTING STRENGTH OF OUR PROVINCES IN THE LEGISLATIVE ASSEMBLY*

By RAMANANDA CHATTERJEE

INDIA is not yet a federation of inter nationally autonomous states. But Indian political thinkers generally have such a political future for the country in view. Should India in future have a federal constitution some of the main features of the present constitution would be likely to be preserved or at least to be generally followed in evolving a new constitution. It is therefore necessary to examine the present constitution to see whether it is in accordance with the normal types of federal constitutions and follows the principles of representative government. It will suffice to take into consideration the constitution of the United States of America for purposes of comparison.

The Federal Legislature of the United States is thus described in the eleventh edition of the Encyclopaedia Britannica—

"In 1787 all the states but three had bicameral legislatures—it was therefore natural that the new national government should follow this example not to add that the division into two branches seems calculated to reduce the chances of reckless haste and to increase the chances of finding wisdom in a multitude of counsellors. There was however another reason. Much controversy had raged over the conflicting principles of the equal representation of states and of representation on the basis of numbers the larger states advocating the latter the smaller states the former principle and those who made themselves champions of the rights of the states professed to dread the fear of power which an assembly representing population might exert. The adoption of a bicameral system made it possible to give due recognition to both principles. One house, the

Senate contains the representatives of the states every state sending two the other the House of Representatives contains members elected on a basis of population. The two taken together are called Congress and form the national legislature of the United States.

In the Indian Central Legislature which corresponds to the United States Congress, the Council of States may be considered the Senate and the Legislative Assembly the House of Representatives. But neither in the Council of State nor in the Legislative Assembly is the principle of equal representation of provinces or the principle of representation on the basis of population followed. The principles of the federal system of representative government, followed in USA, Australia and Canada for example, would require that all the provinces should have an equal number of elected representatives in the Council of State and numbers of elected representatives in the Legislative Assembly in proportion to their population. But the Indian Central Legislature is not constituted on such or any other logical and consistent principle.

The number of elected representatives of the Indian inhabitants of the provinces in the Legislative Assembly is shown below

Province	Population	Elected
		Indian M.L.A.s.
Madras	42,318,983	15
Bombay	19,348,219	14
Bengal	46,639,736	14
U P	45,375,787	10
Punjab	20,683,024	12
Bihar and Orissa	31,002,183	12
C P	13,912,160	6
Assam	7,606,230	3
Delhi	488,185	1
Burma	13,212,192	3
Ajmer Merwara	495,771	1

* This paper has been sent to the Secretary All India Congress Committee, the Secretary Muslim League, the Secretary Indian National Liberal Federation, the Secretary Hindu Mahasabha, and the Secretary, Non Brahman Federation for necessary action.

It is evident from this table that in assigning the number of representatives to each province the basis of population has not been followed. I have shown in my article on the unequal treatment of the provinces under the Reforms published in the August number of the *Modern Review* that neither the basis of the literate population (in the vernaculars or in English) of the provinces nor the basis of the total revenues collected therein has been followed.

The result of this illogical and inconsistent scheme of representation has been the pre-dominance of the minority in India as a whole, and in the case of some of the provinces taken individually. The following provinces contain the majority of the inhabitants of British India —

Provinces	Population	Elected Indian, M L A's
Madras	47,318,980	15
Bengal	46,695,536	14
U P	45,375,787	15
Total	134,390,303	44

The following remaining provinces contain the minority of the population of British India —

Provinces	Population	Elected Indian M L A's
Bombay	19,348,919	14
Punjab	20,688,024	12
Bihar Orissa	31,002,189	12
C P	13,912,760	6
Assam	7,606,930	3
Delhi	488,188	1
Burma	13,212,192	3
Ajmer Merwara	495,271	1
Total	107,750,073	52

the number of representatives which the O P has

Bihar and Orissa has a much larger population than Bombay. But Bombay has fourteen elected Indian M L A's. Bihar and Orissa twelve. The population of Bihar and Orissa exceeds that of the Punjab by more than fifty per cent. But both the provinces have the same number of Indian elected representatives in the Legislative Assembly. The population of Bihar and Orissa is more than double that of the Central Provinces, but the former are represented by only double the representatives of the latter.

The C P and Assam combined, possess a larger population than either Bombay or the Punjab taken singly. But Bombay and the Punjab each have more representatives than the C P and Assam combined.

The United Provinces possess more than double the population of each of the provinces of Bombay and the Punjab. But the U P does not enjoy a proportionately larger representation. Again Bombay and the Punjab combined have a smaller population than the U P but jointly possess greater voting strength than the latter. The United Provinces possess a larger population than Madras but both have the same number of elected Indian M L A's.

Madras has more than double the population of each of the provinces of Bombay and the Punjab but does not possess proportionate voting strength in the Legislative Assembly.

Bengal has a larger population than every one of the other provinces but its voting strength is not proportionately large. Its population is larger than that of Madras and U P singly, but the number of its elected Indian M L A's is less than that of either of the latter taken individually. Bengal possesses more than double the number of inhabitants of Bombay and of the Punjab, but the number of its elected Indian M L A's is only equal to that of Bombay and slightly greater than that of the Punjab. Bengal has a larger population than the following groups: the Punjab and the C P, Bombay and C P, the Punjab and Burma, Bombay and Burma, the Punjab and Assam, Bombay and Assam, and Bihar and Orissa and Assam. But in the Legislative Assembly Bengal possesses a smaller number of elected Indian M L A's than every one of the above-mentioned groups of provinces.

Proportionate and disproportionate voting

strength can be considered both from the point of view of provincial interests and from that of the opportunity given to the people of each province to serve India and gain political experience. There is no reason why even a single province should have proportionately less of such opportunity than any other province. This opportunity is a right and a privilege, and carries with it corresponding duties and responsibilities. The citizens of provinces which are proportionately under-represented count for less as citizens to that extent. There is no reason why they should so count. They are also to the extent of their under representation, deprived of the

right and opportunity to serve India. There is no reason why they should be so deprived.

The Indian National Congress, the Indian National Liberal Federation, the Muslim League, the non Brahman Federation, and other similar bodies exist, not to perpetuate existing political and civic injustices and wrongs, but to apply such remedies and make such changes as would produce the best results and give general satisfaction by making the ideal take the place of the actual, so far as may be. For this reason I draw their attention to the question of the voting strength of the provinces in the legislative Assembly.

INDIANS IN BURMA

BY AN INDIAN IN BURMA

WHILE Indian leaders and publicists have busied themselves with commendable zeal in ameliorating the condition of Indians in far off Africa, they have failed lamentably to take into account the various pin pricks that the Indians have to suffer at every turn under their very nose in Burma. Perhaps, Indians in Burma are too near to be seen truly. But the time has come for the question to be seriously and effectively tackled in the interests of all concerned.

There are clearly three parties to the affair, and their relative positions have to be considered to arrive at any right or definite conclusion in the matter. In the first place, there are the Indians themselves. Secondly, the sons of the soil and last of all the Government and European exploiters. The first—yes it is a fight, although not acknowledged by many is, therefore, a three cornered one, which, naturally makes the problem difficult and intricate. Let us consider the parties one after another.

The Indians who number according to the 1921 census 887,000—or roughly 7 per cent of the total population—are scattered all over the province but by far the largest proportion reside in Rangoon. They are engaged in various pursuits—trade, law, industry, public service and predominantly, menial labour. According to the census of 1921 only about

6 per cent support themselves by public service and the professions and the balance by agricultural and industrial pursuits, labour and trade. It is well known that in Burma gharri wallahs, rickshaw pullers, shipping and bazar coolies, cartmen, barbers and sweepers are all Indians. These latter live under the most debasing and miserable conditions, but that is a different story. For our present purpose, it is necessary to point out that the name 'Indian' in Burma does not represent a united people as one would hope and expect. True, the Hindu Muslim question is almost non-existent, but there is no solidarity among the Indians. We have the traditional extremists and moderates among ourselves in Burma, too. There is nothing like Indian opinion in this country (to call it a "province" is merely to blindly follow the established usage), or, if there is one or is masqueraded as one, it is either feeble or partisan so that the other parties can afford to ignore it. One reason for this disunion or rather want of union is perhaps the apathy of the average Indian in Burma towards the problems that affect him as member of the Indian community. He pursues his calling with extraordinary zeal, but has hardly any community consciousness. Racial pride among the people of the various provinces, I suspect, is also a barrier to

wholehearted union—though to a smaller extent.

But a graver reason is afforded by the so called Congressmen in Burma, of whom there were plenty about 4 years ago, but, whose number is happily diminishing. These worthy folk, by their misshapen patriotism, and ingenious propaganda have deliberately kept the Indians ignorant of their true position, and have opposed and scoffed at every attempt made by more honest and sensible men to form an association of Indians for safe guarding Indian interests under the spacious cry of "Indo-Burma Unity." These gentlemen so far forgot themselves in their noble mission, that, I remember, four years ago, one Congress Secretary, appealing to the young men of "Indo-Burma" to enlist as volunteers under the Congress flag. As early as 1921 Mr S Vedamurti, who later on became a member of the Council of State, then Editor of the *Rangoon Daily News*, mooted the idea of forming an Indian Association in his paper, to safe guard Indian interests. It was the year of Gandhi, 1921, and the most vociferous section of the Indians in Rangoon, who suffered or pretended, for reasons of their own, to suffer from the impact of Gandhism, pooped the idea in the name of unity and even held up the author of the scheme to ridicule, for the Indians and Burmans said they were safer cousins, because, the Buddha, the God of the Burmans, was an Indian. And because Indians and Burmans must in any case join hands to fight their common enemy, England.

Thus did the Congressmen succeed in stifling the true and natural voice of the majority of Indians the majority who were both dumb and indifferent and mostly ignorant. For the next four years, nothing happened in this direction, until in June 1925, when the late U May Oung, then Burmese Home Member, introduced the Expulsion of Offenders Bill into the Burma Legislative Council. The measure was obviously directed against the Indians in particular. It provided for the expulsion from Burma for a specified period of an individual not born or domiciled in Burma who is convicted by a Court of Law of certain criminal offences, including political offences. The Government of Burma have always looked upon the Indians with an eye of suspicion as being the carriers and propagators of the virus of nationalism or non co-operation in this country

and they wanted if possible to send the agitators away. It was then that the Indians were aroused from their complacent slumber. A mass meeting was held on the 7th of June 1925, where it was resolved to form an Indian Association to safe guard Indian interests. But the organisers of this meeting were again the same Congressmen, who, could not or would not get rid of the fiction of Indo-Burman unity and who, therefore, declared that the aim of the proposed Association was to safeguard Indian interests and to work in unison with the Burmans.

The Association, however, proved a still-born child. In the meantime the Expulsion of Offenders' Bill became law, with certain modifications. Simultaneously with the above bill another bill known as the Burma Seapassengers' Bill had been also introduced. Its object was to levy a tax of Rs 5—on every immigrant entering Burma by sea. This was directed against the Indian labourers who immigrate into this country in large numbers. This Bill was also passed by the Burma Council but was vetoed by the Viceroy, who was wise enough to see the suicidal folly of putting restriction on the flow of Indian labour into Burma. The measure was also strongly opposed by the European capitalists who depended almost wholly on Indian immigrant labour for their noble work of "developing" Burma. The slender agitation caused by the above two measures having subsided, the Indians once more settled down to their business and forgot all about them till recently they have been pulled up by the ganja scare. Of this I will speak presently.

I have said that the Indians are unorganised, indifferent and mostly unconscious of the true situation. Those who call themselves "leaders" and in fact possess some semblance of leadership mainly belong to two classes—lawyers and merchants. Of the lawyers, almost all are moderates, or believers in the reforms. Like their confreres in India and elsewhere, they do not bother about organising Indian opinion, and are satisfied so long as they can make a noise in the Council and outside and nevertheless remain in the good books of the Government. Of the merchants, some are politicians, others are not. As merchants, they have most of them formed themselves into a Chamber of Commerce known as the Burma Indian Chamber of commerce as distinguished from the Burma Chamber of commerce, representing European

The story is interesting. Some time ago (March, 1925) the Burma Government appointed a Committee to enquire and report on the possibility of abolishing the poll-tax (known as the capitation tax in Lower Burma and the thathameda tax in Upper Burma) to which strong exception had been taken by the nationalist members of the Council. They were also asked to suggest alternative resources of revenue—because the poll tax brought to the treasury about a crore of rupees a year, which the Government could ill afford to lose.

In the report the Committee did not recommend the abolition of the poll tax but in case the Government thought it fit to abolish it they suggested twelve alternative sources of revenue which together were expected to compensate the loss due to the abolition of the poll tax. One of these suggested sources is 'sale of ganja' estimated to yield 4 lakhs of rupees a year.

Now the Burmese Government, on consideration of the Committee's report, did not decide to abolish the poll-tax but nevertheless, resolved to tap some of the sources of revenue suggested by the Committee, including the sale of ganja, which had been prohibited in 1873. The Government resolution on the point runs thus—

'That the Government should take steps to sell ganja in large towns involves the reversal of a policy which has been in force since 1873. The Sale of Ganja in Burma save for medical treatment of elephants is prohibited but the prohibition is more nominal than real. It is common knowledge that Indian consumers experience little difficulty in satisfying their requirements. It is generally believed that the drug does not appeal to the taste of Burmans in whose interests the policy of prohibition was adopted. It is impossible to reconcile a policy of prohibition in respect of Ganja for which Burmans have evinced no partiality with the policy of selling opium which is believed to be specially deleterious to Burmans. His Excellency the Governor of Burma has therefore decided to introduce the sale of Ganja to Indians as an experiment in Rangoon. If the experiment is successful its extension to other towns will be considered.'

Every line of the above resolution shows a cynical disregard of the welfare of the Indian community. The policy of prohibiting Ganja was introduced in the interest of the Burmans and not of the Indians. But since the drug does not appeal to the Burmese taste, no prohibition is needed. Again, since the Government sells opium which is deleterious to the Burmans, why should not they sell Ganja which is deleterious to the Indians? Fine logic, indeed. The Minister of Excise is a Chinaman.

The Rangoon Corporation has recently adopted a resolution condemning the Government proposal and an Anti Ganja and opium Committee has been formed under the Chairmanship of Mr S A S Tyahjee, Swarajist M. L. C. of Burma. It remains to be seen what effect the activities of these bodies have upon the Government's action. It is clear, however, that occasional and spasmodic efforts of this nature cannot become really effective and produce lasting results. The remedy lies in organised action.

The Indian population forms only about 7 per cent of the population of Burma, of which 5 per cent are immigrants and about 2 per cent born in this country. Of the immigrants about 6 per cent follow trade and the professions and 94 per cent are labourers. About only 4 per cent of the labourers, again, are domiciled, the remainder are in a state of flux. Of the 6 per cent who follow the arts, professions and trade very few indeed have any intention of settling in Burma. This feature of Indian life perhaps stands in the way of unity and organised action. But the time is come to take stock of the real situation instead of drifting along the current of time towards an unknown destination. So long as the Indians are disorganised and so long as they lack a definite policy and programme but dabble with all sorts of political formulas, they cannot expect to be heard or respected.

NOTES

How Tagore has been Misrepresented

It is not necessary to point out all the misquotations of which Miss Mayo has been guilty in "Mother India." We will give here only one passage from Rabindranath Tagore's essay in Count Keyserling's *Book of Marriage* which she has misquoted Tagore writes —

'The desire however against which India's solution of the marriage problem declared war is one of Nature's most powerful fighters consequently the question of how to overcome it was not an easy one. There is a part our age said India, at which this attraction between the sexes reaches its height so if marriage is to be regulated according to the social will it must be finished with before such age. Hence the Indian custom of early marriage.' (*Book of Marriage* page 112)

In quoting this passage Miss Mayo has left out the words said India' which we have italicised making it appear as if the views expressed therein were Tagore's instead of being those of people who support early marriage, which is not identical with child marriage. It must also be borne in mind by foreigners that the Hindu child marriage is followed by another ceremony after the attainment of puberty, prescribed by the shastras, before the bride and bridegroom can live as husband and wife. This is the normal practice, though there are deviations from it. The Hindu child marriage is in fact, according to the Shastras, an espousal.

In the same essay of Tagore's there are words like, 'these must have been the lines of argument,' "such was the conclusion," etc showing that he was not giving expression to his own views.

Miss Mayo, being a dishonest woman has not given Tagore's own views, which are given at the end of his paper "Let me," he says, "as an individual Indian, offer in conclusion my own personal contribution to the discussion of the marriage question generally." "In our language we call the power of woman over man by the name of *Shakti*. Deprived of *Shakti* the creative process in society languishes, and man, losing his vitality, becomes mechanical in his habits. The manner in which the relations between the sexes have been regulated in our country has left no room for the action

of this *Shakti*." This would show to any honest reader that Tagore is not a supporter of the prevailing marriage customs of India.

League Dominated by Scheming Imperialists

Reuter thus reports a speech of M Hambro delegate from Norway to the League of Nations this year, at one of the League meetings —

Geneva, Sept. 8

Vociferous applause punctuated a vigorous speech of M Hambro of Norway who frequently glanced at Sir Austen Chamberlain, criticised the work of the Council and spoke of the secret activity of the Council within the Council. Discussing the important agenda before the General Council M Hambro finally asked why the Under Secretaries of the League only belonged to the great Powers and said that Norway admired the work of the Secretariat, but it would do even more if the Powers that were still outside were brought inside. Delegates rose and patted M Hambro on his back as he returned to his seat — Reuter.

M Hambro represented a country which contains only 26 lakhs of people. But he could speak the truth without fear, because he is a free man. The so called Indian delegates of India not being free men, are or profess to be full of admiration for the League.

Rabindranath Tagore's Repudiation

Some Indian newspapers have already shown by quoting the exact words of the poet Rabindranath Tagore from Count Keyserling's *Book of Marriage* that by omitting a few words therefrom here and there Miss Mayo has made it appear that opinions which were not the poet's were really his. She has also refrained deliberately from quoting his own opinions, which are to be found towards the end of his essay on the Indian ideal of marriage. This essay originally appeared in Bengali in Prabasi. The reviewer of Miss Mayo's "Mother India" in the London *New Statesman* went one better than her. He attributed to the poet an opinion which even that lying woman had not done. Having accidentally come across this malicious review

the poet has sent from Moendock Bah a letter of protest to *The Manchester Guardian*. He has favored us with a copy of his letter, from which we reproduce a few paragraphs. Says he —

While travelling in this island of Bah I have just chanced upon a copy of the *New Statesman* of the 16th of July, containing the review of a book on India written by a tourist from America. The reviewer while supporting with an unctuous virulence all the calumnies heaped upon our people by the authoress and while calling repeated attention to the alleged common Hindu vice of untruthfulness even amongst the greatest of us has made public a malicious piece of fabrication not as one of the specimens picked up from a show-case of wholesale abuse displayed in this or some other book but as a gratuitous information about the truth of which the writer tacitly insinuates his own personal testimony. It runs thus: 'The poet Sir Rabindranath Tagore expresses in print his conviction that marriage should be consummated before puberty in order to avert the vagaries of female sexual desire.' (Itakes care Ed. M. R.)

Then referring to another but an allied kind of lie namely war lies the poet adds:

We have become painfully familiar with delirious circulation of hideous lies in the West against enemy countries but a similar propaganda against individuals whose countrymen have obviously offended the writer by their political aspiration has come to me as a surprise. If the people of the United States had ever made themselves politically obnoxious to England it is imaginable how an English writer of this type would take a gloating delight in proving with profuse helps from the news columns in the American journals their criminal propensity and quote for his support their constant indulgence in vicarious enjoyment of crimes through cinema pictures. But would he in the fiercest frenzy of his rhetoric running amok dare make the monstrous accusation let us say against the late President Wilson for ever having expressed his pious conviction that the lynching of the Negroes was a moral necessity in a superior civilisation for cultivating Christian virtues? Or would he venture to ascribe to Professor Dewey the theory that centuries of witch burning have developed in the Western peoples the quick moral sensitiveness that helps them in judging and condemning others whom they do not know or understand or like and about whose culpability they are never in lack of conclusive evidence? But has it been made so easily possible in my case such a deliberately untruthful irresponsibility in this writer condoned by the editor by the fact that the victim was no better than a British subject who by accident of his birth has happened to be a Hindu and not belonging to the Muslim community which according to the writer is specially favoured by his people and our government?

He concludes his long letter thus —

The writer in the *New Statesman* has suggested for the good of the world that the people of India condemned by the tourist for malpractices

should never be assisted by the benevolent British soldiers safely to preserve their existence and continue their race. He evidently chooses to ignore the fact that these people have maintained their life and culture without the help of the British soldiers for a longer series of centuries than his own people have. However that may be I shrink from borrowing my wisdom from this source and make a similarly unimulating suggestion for his kind of writers who spread about the malignant contagion of race-hatred because in spite of provocations we should have a patient faith in human nature for its unlimited capacity for improvement and let us hope to be rid of the lurking persistence of barbarism in man not through elimination of the noxious elements by physical destruction but through the education of mind and a discipline of true culture.

—

Katherine Mayo's Mendacity

We have shown conclusively in our last number page 401, that Miss Mayo's *Mother India* begins with a lie. Since then Mahatma Gandhi has shown in *Young India* what liberties she has taken with the views he has expressed on various occasions and in his organ. He has also categorically denied having given her the message which she writes he gave her.

Mr Popley of Madras has written *The Indian Witness* that many things which Miss Katherine Mayo ascribes to Miss Bose, Principal of the Victoria College, Lahore were never said by the latter.

Some facts there may be in Miss Mayo's book correctly stated. But some such facts, served up with half truth, garbled extracts and lies cannot make a book truthful. That she is an anti Indian propagandist has been shown in our last issue, pp. 360-361.

—

Abbe Dubois, a Precursor of Miss Mayo

Miss Mayo has borrowed some of her statements from Abbe Dubois's book on *Hindu Manners Customs and Ceremonies*. In order to show what kind of man this abbe was and that he was paid by the East Indian Company to write what he did and also got a pension from the same Company, we quoted the following passage in the last number but one of *Prabasi* from the eleventh edition of the *Encyclopaedia Britannica*, Vol. VIII p. 624 —

But his great work was his record of *Hindu Manners Customs and Ceremonies*. Immediately on his arrival in India he saw that the work of a

Christian missionary should be based on a thorough acquaintance with the innermost life and character of the native population. Accordingly he adopted European society adopted the native style of clothing and made himself in habit and costume as much like a Hindu as he could. He gained an extraordinary welcome among people of all castes and conditions, and is still spoken of in many parts of South India with affection and esteem as "the prince's son, the noblest of Europeans."

"Although Dubois modestly disclaimed the rank of an author his collections were not so much drawn from the Hindu sacred books as from his own careful and vivid observations, and it is this united in a remarkable prescience, that makes his work so valuable. It is divided into three parts: (1) a general view of society in India, and especially of the caste system; (2) the four states of Brahmaical life; (3) religion—fasts, temples, objects of worship. Not only does the author give a shrewd, clear-sighted, candid account of the mores and customs of the Hindus, but he provides a very sound estimate of the British position in India and makes some eminently just observations on the difficulties of administering the Empire according to Western notions of civilization and progress with the limited resources that are available. Dubois's French *Me moirs* purchased for eight thousand rupees by Lord William Bentinck for the East India Company in 1807 to 1816 an English translation was published and of this edition about 1894 a curtailed reprint was issued. The abbe, however, largely recast his work and of this revised text (*now in the India Office*) an edition with notes was published in 1897 by H. K. Brao-champ Dubois left India in January 1823 with a special pension conferred on him by the East India Company and on reaching Paris was appointed director of the Missions Étrangères of which he afterwards became superior (1836-2839)."

The words italicised by us in the above extract leave no doubt that he was paid by the East India Company, then the rulers of British India, to do what he did. As at the time when he was in India, there was little love lost between England and France, the very fact of his receiving Rs. 8,000 and a special pension from the English shows that he did his semi-political work very satisfactorily. He served the government of the East India Company also by providing them with an excuse for not administering the affairs of India according to civilized notions of progress. That excuse was, "the limited resources available." But these "limited resources" have sufficed to enrich England at the cost of India. These limited resources were what tempted Englishmen and other Europeans to come to India to shake the pagoda tree.

In order to gain the confidence of the people of India, he embraced "in many respects the prejudices of the natives"—so good a Christian was he. Apart from the

political motive—namely, blackening the life and character of the people in order to prove to accidentals their unfitness for independence—which one may fairly impute to him, he had a "religious" motive. In spite of his "becoming all but a Hindu", he could not gain many converts. Those whom he could convert were, he says, mostly pariahs or beggars, "and the rest were composed of Sudras, vagrants, outcasts of several tribes who being without resources turned Christian in order to form connexions chiefly for the purpose of marriage, or with some other interested views." He, therefore, had recourse to a different method to gain proselytes, viz to write the book on which his fame rests. He tells us of this motive in the preface to his book.

"There is one motive which above all others has influenced my determination. It struck me that a faithful picture of the wickedness and incongruities of polytheism and idolatry would by its very ugliness help greatly to set off the beauties and perfections of Christianity. It was thus that the Lacedæmonians placed drunken slaves in the sight of their children in order to inspire the latter with a horror of intemperance."

A man working with such a motive cannot help saying and suggesting much that is false. But supposing his picture of the wickedness and incongruities of the Hindu religion were really "faithful," a record of the wickedness and incongruities alone of a religion cannot be a faithful description of it. And yet Abbe Dubois's book is considered authoritative in many quarters. And it is to this biased and mercenary writer that Miss Mayo is indebted for some of her false statements.

Mr Harbilas Sarda's Child-marriage Bill

Mr Harbilas Sarda's Hindu Child-marriage Bill has been referred to a select committee. Its object is twofold. "The main object, by declaring void the marriages of girls below 12 years of age, is to put a stop to such girls becoming widows. The second object, by laying down the minimum marriageable ages of boys and girls, is to prevent, so far as may be, their physical and moral deterioration by removing a principal obstacle to their physical and mental development."

If the Bill passes into law, the first object will be fully gained, but not so the second object. The bill fixes the

minimum marriageable age of girls at 12 and that of boys at 15. If boys and girls be married at 16 and 13 respectively even that cannot prevent physical, moral and mental deterioration. The bill therefore errs on the side of 'extreme caution'—particularly as it makes the marriage of girls of eleven permissible after obtaining a licence from district magistrates.

We do not condemn Mr Sarda's caution. He himself would like to make the minimum marriageable age of girls sixteen. But he wishes to carry with him as far as may be practicable those sections of the Hindu community which go in for marriages of girls below 12. Giving him every credit for his good motive we would urge that the minimum marriageable age for girls should be fixed at 14. At present the number of girls in orthodox families who are married at the age of 15 or 16 or 17 is by no means negligible and the number of those who are married at 12 is very large. Therefore to fix the minimum age at 14 would not raise it in the case of the educated classes. We shall show before we conclude this note what the average age of marriage of girls actually is.

From what has been written above it will have been seen that the proposed law is not in the least of a revolutionary character. It is not at all likely to produce any commotion even in the orthodox section of the Hindu community. Yet what did Sir Alexander Muddiman, the then Home Member of the Government of India, say when the bill was introduced in the Legislative Assembly on the 1st February last? Said that Honourable Member—

Sir I do not desire to break the convention that Bills should not be opposed at the introduction stage, but this is a Bill of a very peculiar character which requires the sanction of the Governor-General. All that I wish to say is that, on behalf of the Government, I shall oppose any other motion after motion for introduction other than a motion for circulation.

So but for the convention referred to by him he would have opposed even the introduction of this very peculiar bill.

Not having any skill in thought reading we cannot definitely say why Sir Alexander Muddiman expressed his determination on behalf of the Government, to oppose all motions except the one for the circulation of the bill. Had he not been transferred to another sphere of action he would have opposed the bill being referred to a select committee. His

successor Mr Croomer has followed the policy outlined by him by opposing the motion for the reference of the bill to a select committee and insisting upon its circulation for obtaining the opinion of the public on it. As the Government does not care a straw for public opinion when it goes against the opinion of the bureaucracy and non-official British opinion here and in Britain and against British interests generally, this anxiety for ascertaining public opinion is farcical in the extreme. And what is there to ascertain? For about half a century the controversy on the marriageable age of girls has gone on. All the Sanskrit verses which have anything to do with it have been quoted by reformers and orthodox people. There are some who are opposed to reform and there are others who want reform. Census figures show decade after decade that the age of marriage of girls has been rising, proving that the cause of reform has been gaining and the cause of blind conservatism losing adherents. If nothing is to be done until there is no one left to oppose reform, one would have to wait till doomsday.

It is stated in the Census Report for India Vol. I, p. 159

Whatever be the causes to which the change may be attributed, the figures clearly show an increase in the numbers of those in the early age categories who are still unmarried. The movement is most marked in the Hindu community but is shared by the other religions. The change is most conspicuous in the age-categories 10 to 15 for women and 10 to 20 for men. In Bengal and Bihar and Orissa the rise in the age of marriage is marked. The number of males left unmarried between the ages of 10 and 15 has risen from 896 per thousand in 1891 to 868 per thousand in 1921, the increase in the age period 15 to 20 being from 591 to 665. The case of girls is still more striking, the figures being given in the marginal table and for both males and females the rise during the last decade has been exceptionally high.

The marginal table is given below
Bengal and Bihar and Orissa
Number unmarried per mille girls aged

Year	5 to 10	10 to 15
1921	891	494
1911	651	422
1901	836	407
1891	877	372

As the custom of child marriage was most prevalent in Bihar and Orissa, Bombay, Baroda, the Central India tract and Hyderabad, the above table is somewhat encouraging.

As regards Bengal the Census Super

intendent writes in the Bengal Census Report 1921, page 269 that For practical purposes we may take it that the average age of the bride in a marriage in Bengal is 12½ and that of the bridegroom rather under 20. This average age in 1921 must be much higher now in 1924. As Bengal is one of the provinces where child marriage has been most prevalent and as here the average age is above 12 and 15 for the bride and the bridegroom respectively, fixing the lowest marriageable age at 12 and 15 is rather going backward than forward.

It is stated in the Census Report for India 1921, Vol. 1, page 10 that child marriage is not exclusively a Hindu custom and of the Hindus who are most addicted to the practice it is among the lower rather than the higher castes that the custom is most rigidly observed. The higher castes are more educated than the lower. The spread of education then helps the cause of social reform. But the Government has all along directly or indirectly prevented the adoption of the principle of universal and compulsory elementary education on the plea of want of money though there is always money enough to increase the salaries and allowances of the pampered European services and to incur increased recurring and capital expenditure of a military character.

It is not that the Government has never passed any laws affecting socio-religious practices. The law abolishing suttee and the law validating Hindu widow remarriage were passed on the sole responsibility of the Government, when there were no legislative councils containing a considerable number of elected representatives of the people. But now, when there are such councils and when a representative of the people introduces social legislation with the concurrence of the majority of his elected colleagues, the Government opposes it. Western propagandists tell the world that we are unfit for self rule because among other things, there is child marriage in India and the British bureaucracy and people take advantage of such propaganda. But when in addition to carrying on agitation against it we want gradually to abolish it by legislation the Government declares its opposition to such legislation. What is the reason?

It cannot be that the Government has grown more timid than before because it has passed various repressive and other laws and taken other steps in the teeth of

vehement popular agitation and opposition. It cannot be that it has never undertaken legislation relating to social customs. We are driven therefore to the conclusion that there are other reasons. It may be that as the social backwardness of the people is stated to be one of the reasons for the continuance of British predominance the British bureaucracy want this backward condition to last as long as possible. It may be that as child marriage and child maternity is a cause of the physical and mental deterioration of the people and of backwardness in education and as these stand in the way of India having a virile and politically self-assertive people the bureaucracy would not like the disappearance of child marriage and child maternity. It may also be that as the bureaucracy have now lost the confidence of the intelligentsia they wish to pander to the superstitions of the masses in order to maintain whatever hold they may have on them. But whatever the cause may be we wish to tell the bureaucracy that if our social backwardness be urged as a justification for the continuance of British predominance it must be because that predominance is to be used for promoting the cause of social progress. If the British bureaucracy will not help us to be socially progressive they must make room for those who will.

That social legislation may be necessary for the advancement or maintenance of social ideals is proved by the fact that "even in England where child marriages are unknown and early marriages are exceptions, it has been found necessary to fix the ages below which boys and girls may not marry."

Those Hindus who are opposed to social legislation but want the abolition of child marriage should inform the public what public meetings they have addressed, what articles they have written and what pamphlets they have published in furtherance of social reform in this particular.

As regards Mr Sarda's bill itself the select committee ought to consider whether the prescription of some deterrent punishment for the guardians of boys and girls married below 15 and 12 may not be substituted for the invalidation of such marriages. For when once boys and girls are married according to the prescribed religious rites it would be very difficult, if not impossible to get suitable matches for them again even

if the rites first undergone were declared legally invalid

As child marriage is not an exclusively Hindu custom, there ought to be a law for its prevention applicable to the followers of all religions. But perhaps it is best to leave the initiative to the leaders of the different communities concerned

Exploitation of Bengal Youths by election candidates

In our July number p 82 we wrote

The worst enemies of our student population are the political leaders who have been shamelessly exploiting the noble patriotism of our young men by turning them by the thousand into unpaid servants for their personal glorification or ambition. We have noticed that for several months before the Council elections of 1926 and the Municipal elections early in 1927 in every ward of Calcutta the students' brigade was drilled and organised and put under requisition by designing political candidates of one particular party. Who did these blind tools of ambitious politicians get any sufficient time to prepare for their examinations?

The latest evidence in support of our statement has been furnished by the following appeal issued early in August 1927 —

CORPORATION BY-ELECTION APPEAL TO YOUNG MEN OF CALCUTTA

Three hundred volunteers of which two hundred have already been enlisted on Wednesday, are required to work in the Corporation By-election in Ward III for the Congress candidate, S. J. Abanindranath. Enrolment will be made at 10, Hastings Street, under the direction of S. J. Kiran Sarkar, Roy, between 10 a.m. to 6 p.m. to-day Thursday. Young men of Calcutta! muster strong

Akhil Chandra Datta.
I. M. Sen Gupta.
T. C. Goswami
Sarat C. Bose
Satyendra Ch. Mitra.
J. M. Das Gupta.
Nirmal Chunder Chunder
B. C. Roy
Nalin Ranjan Sarkar

We do not support but have always opposed and criticised the bureaucratic desire for an "atmosphere of pure study." But it is not right that students should be turned into unpaid (or paid) election agents by any party

is an organisation which is in no way the agency of any Government, yet having the goodwill of all, with the Presidents and Premiers of Pacific lands as its Honorary Heads. Affiliated and working with this Union are Chambers of Commerce, and Educational, Scientific and other bodies. It is supported in part by Government and part by private appropriation and subscriptions. Its central office is in Honolulu, Hawaii, because of its location at the ocean's cross-roads. Its management is under an International Board. Its object is to bring together from time to time in friendly Conference leaders on all lines of thought and action in the Pacific Area that they may become better acquainted and assist them in a co-operative effort for the advancement of those interests which are common to all the peoples. It has established a Pan-Pacific Research Institution, where primarily the work will be along the lines necessary to solving the problem of food-production in the Pacific Area. The Union has conducted a number of successful Conferences, Scientific, Educational, Journalistic, Commercial, Fisheries, and most vital of all, on the conservation of food and food products in the Pacific Areas. A Conference on Education was called by the President of the United States at Honolulu in April, 1927. It has now been decided to hold a Pan-Pacific Women's Conference in July, 1928. The Subjects to be discussed are wide and varied and are divided into five Sections: Education, Health, Social Service, Women in Industry and Women in Government. Miss Jane Adams, Hullhouse, Chicago, has consented to be the Chairman. The Chairmen of the Five Sections are local women who would like to have on their committees at least one woman from each country. Although India does not border on the Pacific, the interests of its women are so nearly allied to the Pacific that there will be mutual benefit by India joining this Conference. Most of the Eastern countries, such as China, Japan, Siam, Korea, Indo-China have already decided to send their representatives. I trust that the women of India will also avail themselves of this opportunity offered to them of getting into contact with the great Nations of the Pacific. I do not know how far our Government will be willing to send a helping hand, though the Governments of the other countries are co-operating with their women. Some Members of the Union are visiting India,

The Mid Pan Pacific Women's Conference

The Pan Pacific Union is well known for its numerous activities and achievements. It

notably Miss Grace Shaenon Miss Flora Lyn Cadwell, Dr Caroline Furness. They hope to meet the women of India and interest them in the Conference. Two Correspondents in India in connection with the Conference are Mrs. M. E. Cousins, Secretary Women's Indian Association Alwar Madras, Mrs. S. K. Datta, National Y W C A Calcutta, Mrs Palmer National Council of Women Dethi Sreemati Kamaladevi Chattopadhyaya Organising Secretary All India Women's Educational Conference Mangalore

KAMALADEVI CHATTOPADHYAYA

"An Exploded Myth

The Indian Social Reformer of Bombay writes —

An Exploded Myth. The editor of *Capital* the well known commercial journal has exploded once for all an old fable which has been repeated times without number as if it was gospel truth by opponents of Indians for self government of India. We reproduce his remarks in another column. This story with suitable modification is repeated in Miss Katherine Mayo's book at page 282. The Maharaja to whom it was originally attributed when asked by the editor of *Capital* whether it was true, fiercely answered "Lie my friend a damned lie. We Rajputs never offend the innocent sirs when we insult our foes we give them the chance to retaliate with the sword. In this connection it is interesting to note the practice which prevailed in India when troops were on the march. The following is taken from the remarkable auto biographical fragment of Nana Fadnavis printed as an appendix to an old memoir of his life recently published for the University of Bombay by the Oxford University Press. Nana Fadnavis writes "After his investiture Madhavrao Sahib having had his audience of leave we started on our way home and returned to Poona. On the road one day, an infantry soldier seized a young woman in a field and threw her down with the intention of committing a rape. One of the troopers on duty observing it galloped up and pierced him in the heart with his spear. Thus I had before me an example of the consequences of indulgence in the passions." The translator Lieut Col John Briggs who was the Resident at the Court of Satara in the middle of the last century explains in a foot note. On the occasion of the march of troops through the country it is usual to post safeguards to protect the persons and property of the inhabitants and it is concluded that the foot-trooper meeting with resistance from the foot-soldier felt himself authorised to act as he did. The rules of war as laid down in that encyclopaedia of Hindu history and culture, the Mahabharata absolutely forbade as heinous and the molestation of women and unarmed and peaceful inhabitants during the operations of war and these rules according to the glowing testimony of hostile Mahomedan historians were strictly enforced by the illus-

trious Shivan in his army. Miss Katherine Mayo's statement, therefore as applied to the Marathas is not less a lie than in the case of the Rajputs.

The extract from *Capital*, referred to above is given below

Miss Katherine Mayo is seemingly conscious of her limitations, for she shows a fondness for smoking room stories to elude out her mess of stale kail. Those who told them to her pulled her leg egregiously. Take the following for instance

Here is a story from the lips of one whose veracity has never I believe been questioned. The time was the stormy period in 1920 when the new Reforma Act was casting doubt over the land and giving rise to the persistent rumour that Britain was about to quit India. My informant an American of long Indian experience was visiting one of the more important of the princes—a man of great charm cultivation and force, whose work for his State was of the first order. The prince Dewar was also present and the three gentlemen had been talking at ease as became the old friends that they were.

His Highness does not believe 'said the Dewan that Britain is going to leave India. But still under this new regime in England they may be so ill advised. So His Highness is getting his troops in shape accumulating munitions and coining silver. And if the English do go three months afterwards not a rupee or a viram will be left in all Bengal.'

To this His Highness sitting in his capital distant from Bengal by half the breadth of India, cordially agreed. His ancestors through the ages had been predatory Mahratta chiefs.

I heard the original of that story much better and more racy told more than forty years ago. The actors were Lord Dufferin and Sir Pertab Singh the gallant Rajput who so often acted as Regent of Jodhpur.

What would happen if the British left India? asked the Viceroy.

What would happen? replied the Rajput warrior? I would call to my Jivans to boot and saddle and in a month there would not be a viram or a rupee left in Bengal.

I knew Sir Pertab well and at the Curzonian durbar I asked him if this conversation had ever taken place. Lie my friend a damned lie," he answered fiercely. We Rajputs, never offend the innocent. When we insult our foes we give them the chance to retaliate with the sword. I am tempted to quote Sidney Smith on American gullibility but why litel a nation for the rantings of an eccentric woman?

The brutal and ribald story has been often repeated each time in new settings showing that occidentals of a certain type of both sexes have a liking for such putridity.

We found it in Mr Ramsay Macdonald's 'The Awakening of India' years ago when it was first published. In our review of it we took the author to task for sulliyng his pages with it. In Mr Wells's *New Machiavelli*, (published 1913) Remington refers to it and speaks of the ruler in the north west as apocrypha!

Bengal and Its People

The Indian Social Reformer of Bombay extracts the following passage from "Mother India" —

Bengal is the seat of bitterest political unrest — the producer of India's main crop of anarchists, bomb-throwers and assassins. Bengal is also among the most sexually exaggerated regions of India and medical and police authorities in any country observe the link between that quality and queer criminal minds — the exhaustion of normal avenues of excitement creating a thirst and a search in the abnormal for gratification. But Bengal also is the stronghold of strict *purdah* and one cannot but speculate as to how many explosions of eccentric crime in which the young political of Bengal have indulged were given the detonating touch by the unspeakable flatness of their *purdah* deadened home lives made the more irksome by their own half-digested dose of foreign doctrines" (*Mother India* p. 118)

The comments of the Editor of the *Indian Social Reformer* on this passage are given below

It is strange — is it not? — that this (according to Miss Mayo) God forsaken province should have produced during this last century the largest number of great Indians who have attained an international reputation Raja Rammohun Roy, Mahatma Devendranath Tagore, Sri Ramakrishna Paramahansa, Keshub Chandra Sen, Swami Vivekananda in the sphere of religion, Michael Madhusudan Dutt, Toru Dutt, Rabindranath Tagore, Sarojini Naidu in the region of poetry, Sir Jagadis Chunder Bose and Sir P. C. Ray in the realm of science, Sir Surendranath Banerjee, Lord Sinha, and Chittaranjan Das in politics, Sir Gurusdas Banerjee and Sir Ashutosh Mukherjee in education. What a brilliant galaxy to spring out of the mud of Miss Katherine Mayo's most sexually exaggerated province! Even New York and Chicago we fancy have not produced greater men in so many spheres and in comparatively so short a time!

As regards the alleged connection between the political unrest in Bengal and the so-called sexual exaggeration of this province, our contemporary observes

The Indian political extremist of the Partition days was described as a sexual pervert. Those who knew him laughed at this description. But very few outside Calcutta or, at most, Bengal knew anything of him. We ourselves did not realise the full extent of this calumny until we had unimpeachable testimony to its utter falsity. The late Sir Narayan Chandavarkar with Mr Justice Beachcroft was appointed by the Government of India to examine the cases of some scores of men mostly students who were held in confinement for alleged complicity in anarchist doings. The committee we think personally interviewed some of them. Its proceedings were private, but this writer distinctly remembers Sir Narayan when he returned from Calcutta, telling him that the talk about the degeneracy of those boys was pure bunkum. On the contrary, they

had he said in effect, made a religion of physical fitness. The Gita was their manual of conduct and devotion, and hard physical exercise was a regular part of their daily discipline. Miss Katherine Mayo need not have come all the way to India to verify the observation of medical and police authorities about the exhaustion of normal avenues of excitement creating a thirst and a search in the abnormal for its gratification.

"Mother India," we fancy, had its origin in such a thirst leading to such a search. The mud in it Miss Katherine Mayo's mind more than in Bengal or any other part of India, though of course India like every other part of the world is compounded of mud and sky.

Outlawing Wars of Aggression

News has been received that the League of Nations Assembly has unanimously adopted the Polish resolution outlawing all wars of aggression. Lord Ooslow, the British delegate expressed the view that the resolution defined clearly the main object of the League and marked a distinct step forward.

The resolution adopted at the League Assembly's meeting has, no doubt, some value as an expression of opinion. But until it is known what steps the League can and will take against aggressive nations, the resolution cannot be expected to produce any good results. The biggest empires of the world to day have grown by aggressive warfare, showing that the nations which are masters of these empires have been the most aggressive in the world. And it is these nations which have permanent seats in the League Council and dominate the League. Should any of these nations become aggressive, excuses would not be wanting to prove that it has not been aggressive. The wolf in the story made out that the lamb was the aggressor. It would be a difficult task to suggest a definition of aggressive warfare entirely free from loopholes. And supposing any of the big powers wanted to be defiant, who would or could oppose them?

But assuming that all aggressive warfare would in future be stopped by the resolution of the League, that could scarcely be held to be a source of great consolation to the subject peoples of the world. It has been repeatedly shown in this Review that the majority of the inhabitants of the world are now subject to foreigners. Future aggressive wars would not result in their greater enslavement, nor would the non occurrence of such wars result in making them free. Therefore, so far as they are concerned, the

League resolution makes no difference in their lot. We and other subject peoples would undoubtedly be happy if countries which are now independent were not conquered and brought down to our humiliating political status. But men being both altruistic and selfish the good fortune of some cannot be felt as a compensation for the wretched condition of the unfortunate.

We do not know of any peoples who are kept in a state of subjection with their consent. All subject peoples want to be free but are prevented by *force majeure* from realising their desire. Those nations who rule foreign peoples and keep them deprived of freedom are really in a state of standing aggressive warfare against those whom they keep in subjection. What is the remedy for this standing aggression? Is the League competent even to dream of any such remedy?

The League's first duty is said to be the maintenance of peace. But can there be said to be any true peace when there is a standing invasion of the rights of subject peoples? All subject peoples live in a state of siege. A state of siege is not peace.

It is to be hoped that the League's outlawry of war will not fizzle out like the talk of disarmament. The world was at first told there would be disarmament then the question debated was reduction then the next stage was limitation. Even that could not be agreed upon. What next?

The British Empire and the League of Nations

The Week comments thus on Sir Austen Chamberlain's description of the British Empire as an older league of nations —

Sir Austen Chamberlain made slip with the words "League of Nations" as a description of the British Empire and referred to the latter as an older league of nations. That of course, is simply untrue. The Empire was an Empire and the just that, with a little gradual mitigation of the Imperial rule as *patria potestas* over "daughter" nations. It was only during the war that the idea of a British Commonwealth of Nations was born and the idea first received documentary expression in England's treaty with Ireland two years after the League of Nations came into existence. And in fact the absolute equality of men, perhaps of the Dominions in the Empire was still so little clear even then that only a few months ago an Imperial Conference had to define it beyond cavil. It is therefore sheer affectation to speak of the British Empire as "the oldest

league of nations in the world. The fact is Sir Austen Chamberlain had a thoroughly bad case to defend at Geneva and if what he said is the best that can be said for it, it only proves how utterly bad it is.

The British Empire is a commonwealth *minus* India where the vast majority of its inhabitants live

The Army and the "Martial Races"

It is only in a subject country like India that one hears of the division of the people of the same country into martial and non martial. In free and independent countries recruits are sought and obtained from all classes only physical fitness and other qualifications being required. In India many areas which formerly 'urnished recruits to the British Government have ceased to be classed as containing people fit to be soldiers. There may have been some degree of real emasculation there produced by British rule. But another fact cannot but be noticed. With the spread of education comes the dawning of political consciousness and patriotism and as soon as this happened in any particular area, it ceased to be a recruiting ground for the Indian army. But that is a long story, which cannot be told here.

The professionally military mercenary classes want that the Indian section of the army should remain a close preserve for them—commissioned officers also when appointed being chosen from their ranks. In reply to the spokesmen of these classes, Sir C. P. Sethna spoke as follows in the Council of State —

It will interest Sir Umar Hayat and those who hold the same views as he does that in the course of our investigations at St. Cyr in France we enquired as to the number of boys who came from the military classes and of those whose fathers had not followed the military profession. The House will be interested to know that out of the 375 boys at St. Cyr at the time 175 were sons of professional soldiers and 100 were sons of men in different civil professions. We were told further that the former namely the sons of soldiers, did not as a rule display any greater military aptitude than the latter and the latter the House will be still more interested to know were sons of tax-collectors, business employees, carpenters, chemists, agriculturists, bailiffs, butchers, hand masters and working men.

Women Students at Dacca University

According to a statement made by the Vice-chancellor of the Dacca University, last

session there were five women students of whom three lived in the women's hostel attached to the Dacca Hall. This session 13 women students have taken admission and had come to the hostel. Of the 13 students in the University 4 are reading in the fifth year M. A. Class, one in the sixth year M. A. Class, five in the third year B. A. Class, two in the fourth year B. A. Class, and one in the first year Law Class. In the recent University examination Miss Fazilat unnessa, a Mahomedan woman student, obtained a first class first in M. A. in Mathematics. Miss Fazilat unnessa's achievement is a record for Bengali Muslim students as well as for Bengali women students of all sects.

Of these thirteen women university students at Dacca two are Brahmins, one is a Muslim, and the remaining ten are Hindus.

The Dacca University Court has recommended the expenditure of Rs. 5000 per annum for enabling a woman student to proceed to Europe for the prosecution of higher studies.

An Indian Woman Student's Success in America

Miss Sarala Ghosh of the Darjiling Maharani Girls School has obtained the degree of M. A. in Sociology and Economics graduating from Wellesley College, Massachusetts, U. S. A. She has raised one thousand dollars from this college for the building fund of the Maharani Girls School.

Maharani Sumati Devi's Princely Gift

The Victoria Institution for girls was founded in Calcutta by Keshub Chunder Sen. His eldest daughter, the Maharani Sumati Devi of Cooch Behar, has recently made over Lily Cottage, her father's residence in Calcutta, with its grounds covering four bighas to this institution. The property must be worth several lakhs of rupees. This noble gift is worthy of both father and daughter. It will give stability to the institution which will continue to do good to the women of Bengal generation after generation.

Indira Maharani Hunting and Dancing

We have felt greatly pained and humiliated at the report published in the papers

that the Maharani Indira of Cooch Behar, who has several children, has been spending her time in England in hunting and dancing, occupations which are unworthy of a Hindu widow. Hitherto only Indian Maharajas have been guilty of squandering abroad the wealth extracted from their uncared-for subjects. It would be a evil day for India if Indian Maharajis followed the unworthy example of Indira Maharani. The following cutting from a British paper has been sent to us by an anonymous indignant Indian correspondent—

A DANCING MAHARAJI

One of the keenest dancers in London just now is the young Maharani of Cooch Behar, a very beautiful girl who dresses her hair in modern style and wears it uncovered but has not dispensed with her long sari. She was dancing at Chez Victor this week and I notice that she uprooted all the points in the various songs sung, thereby by Leslie Hutchinson so her English is evidently very good. This is not surprising as her husband and his brothers were educated at Eton and her father is the Gakwar of Baroda.

Our ruling princes, particularly the widows, should follow the noble example of the sainted Maharani Abalynabai of Indore.

"An Indian Gulliver"

Under the above caption, *The Week*, the Calcutta Roman Catholic organ, has the following editorial paragraphs:

In our issue of August 11th we gave a detailed account of the reception accorded to Rabindranath Tagore at Singapore. Sir Hugh and Lady Clifford having their fellow citizen in the Republic of Letters staying with them for three days, the whole official and non-official European world of course with that snobbery so characteristic of petty Society in tiny corners of the world fell over each other to follow the gubernatorial lead. As a consequence the Poet's progress through Malaya was of a semi-royal nature at least until he had got half way through. Then a bombshell burst. Somebody had discovered that Dr Tagore was 'horror of horrors' disloyal and anti-British. The way the discovery was made is also typical of the closed-in toy universe in which these people live—three days steam from Calcutta. Somebody we say had found in a Manila paper that a Shanghai paper had said that a Chicago paper had said that the Poet had said to a Calcutta paper that he heartily disapproved of Indian troops being sent to China as pawns in the British game in China. This amazing discovery of course might have been made last February when the Poet gave an interview on this China business and in fact another and still graver discovery which seems not yet to have been made in Malaya might indeed have been made earlier still viz. that Sir Rabindranath Tagore on a certain occasion renounced his

British knighthood. Well may the heads of "Society" people of Malaya reel. Such a seditionist! Such a traitor! This anti-British viper! and actually staying at Government House.

Meanwhile on leaving Malaya, the Post has through his Secretary Prof. E. Ariam Williams issued a dignified statement. But we hope sincerely that the matter will not end there and that, when Rabindranath Tagore returns home he will write for the world's delectation a light comedy of his travels to Lihput.

—

Outrages on Women in Bengal

In our last issue we printed a letter from a Muslim lawyer in which he expressed a doubt as to whether his co-religionists were guilty of a larger proportion of crimes against women than the followers of other creeds. There is not the least doubt that they are. *Sanjibani*, the Bengali weekly has carefully worked out certain percentages based on the published cases of such crimes committed during the last five years. Here are some of these figures:—

Of such crimes 50.6 per cent. were committed by Muslims, 20.5 per cent. by Hindus, 5.3 by Hindus and Muslims combined and 14.2 by persons of unknown religious profession.

Of the crimes committed by gangs of rascals 57.4 per cent. were committed by Mohammedan gangs, 18.4 by Hindu gangs, 9 by combined Hindu and Muslim gangs and 14.4 by gangs of men whose religion is unknown.

Of the women offended against 68.7 per cent. were Hindus, 21 per cent. Muslims and 6.8 of unknown religion.

30.8 per cent. of the crimes were committed by single individuals, and 61.6 per cent. by gangs.

These figures support our conclusion that there are brains, money and organisation behind many of these crimes.

It will not be pleasing news to anti-Indian propagandists to learn that not a single Indian extremist or anarchist has ever been accused of any crime against women. In fact, if political suspects had anything to do with such crimes they would have been hunted down in no time. The British Government entertains the services of a rather large and costly detective staff with spies added who detect and some say manufacture political criminals. But the same chivalrous British

Government has not taken any special step to punish and put a stop to crimes against women in Bengal. The comparative criminality of Hindus and Muslims does not trouble us so much as the question of how the honour of women can be made safe everywhere.

—

The Viceroy on Communal Unity

If the duty of the Governor General of India had been only or mainly to make speeches it would have been quite the right thing to judge Lord Irwin by his speeches. But he is the executive head of the British Government here. His duty therefore does not end with preaching sermons. The question of the sincerity of such sermons does not arise. The head executive officer is to be judged above all by what he does.

Lord Irwin seems to think that communal unity and amity can be established solely by the efforts of the communities concerned. That is however not the case. There are undoubtedly historical religious and social causes underlying communal discord in India. But these causes had been in existence from before the establishment of British rule in India. To these causes have been added political and economic factors for which British rule is responsible. The assertion of Lord Morley in his *Recollections* that Lord Minto started the communal hare and Maulana Mohamed Ali's dictum that the Muslim deposition which waited on Lord Minto for a despoiled fixed proportion of the seats in the Councils then proposed to be expanded was a command performance, while remaining true have lost their novelty by repetition. Since the Morley-Minto Reforms the Government has done many other things which have accentuated the separatist tendency.

Whenever and wherever the executive officers have anticipated or imagined any breach of the peace owing to possible communal conflicts law and order has been attempted to be maintained by preventing the Hindus from going on with their religious observances—not because the Hindus were likely to be turbulent and break the peace but because the Muslims might try to interfere with Hindu celebrations by force.

A Governor-General and all subordinate executive officers under him are, therefore, indirectly responsible for communal conflicts and riots along with the members of the communities themselves. The district executive officers and the district police are directly responsible for the non-prevention of communal riots. We presume, though we are not sure, that if there be any increase in ordinary crime in any district the district officers and police are departmentally held to have been inefficient or negligent in the discharge of their duties. Similarly, if there be communal riots in any district, the executive and police officers should be sternly taken to task. Their promotion should be stopped, they should be degraded, or they should be dismissed, according to the degree of their incompetency, neglect, or worse. But, as far as we are aware, this is never done.

The Montagu Chelmsford Reforms Report contains a long and convincing argument against communal representation, but nevertheless concedes what the separatists want. Then, there is the reservation of a certain percent. of posts in the public services for Muslims but not for any other class of people. Not that we want any such reservation for all other backward or so-called backward classes. It is impossible to be just to or satisfy all the sects, classes, castes and sub-castes of India by following the principle of reservation of seats in representative bodies or of posts in the public services for these different sections. We can safely challenge anybody to satisfactorily tackle the arithmetical puzzle involved. It may be easy to satisfy the Muslims, but it is impossible to be just to all without following the principle of an open door for for talent the most capable, irrespective of caste or creed or race or class.

Lord Irwin was not entitled to preach the sermon that he did, because he has not done his bit. It may be that he has no power to do anything effective in the directions indicated above. We do not know. But, if he has no power to do his bit, he ought to resign and declare why he has done so. His speech has been hailed in his home country as a great achievement, and it has been sought to be suggested that if communal concord be not established it will be in spite of the Viceroy having done his best, and the fault will lie entirely with the communities concerned and their leaders. But speech-making is perhaps the least of the Governor

General's duties. If it were his main duty, there would be many better preachers of sermons available at quite a small fraction of his salary.

This communal affair is not a mere communal one. It is, if we may so put it, a three-cornered tangle. Concord cannot easily be established only by the efforts of the communities themselves, unless the Government does its bit and high public servants and their underlings sincerely and honorably do their bit as gentlemen.

The Unity Conference

We sincerely regret the failure of the Unity Conference at Simla. We did not anticipate that it would succeed. But we should have rejoiced if our anticipations had been falsified.

So far as we can judge, the only way to establish friendship between the communities is not to curtail any right of any community. Cattle should be allowed to be sacrificed in slaughter-houses appointed for the purpose, at mosques, and in places owned by Muhammadans—but everywhere screened from the public gaze. As nobody takes offence or breaks bread when cattle are led through the streets by butchers to slaughter-houses, they should be allowed to be led through the shortest public routes to the places of sacrifice also. Places where goats, etc., are sacrificed by Hindus should also be screened from the public gaze. Beef stalls may be opened in separate places sanctioned by municipalities or similar bodies, even where they do not exist at present.

We do not write these things with pleasure. Though we are not orthodox, our parentage and upbringing are Hindu, and we are vegetarians by choice and conviction. We value the life of cattle. But, to say the least, we value human life and human liberty (political and of all other kinds) not less. Our conviction is that if Hindus did not make it a point to raise objections to the sacrifice of cattle, there would not be more cow-killing in the long run than now. Probably there would be less in course of time.

So far as musical processions and music in Hindu temples and Hindu homes and institutions are concerned, they should be allowed in all public places and thoroughfares at all times, before

or in the vicinity of all mosques and Muslim homes and institutions in all Hindu and other non-Muslim homes, temples and institutions.

New Ministers for Bengal

The announcement in the papers that as soon as Sir P. C. Mitter returns to Bengal the Governor of Bengal will appoint him and Nawab Musbarraf Hossein ministers has given rise to much discussion in the papers. Discussion is necessary and ought not to be objected to. But we have no relish for personal squabbles and do not intend to take any notice of them.

We have never been in love with dyarchy. But the mere scotching of it without killing it and substituting something better in its place is to us a futile and uninteresting game. If the ministers can get some of our money to spend for the good of the province that is not worse than allowing all the money to be spent by the British bureaucrats according to their fancy pleasure whim or self interest. But of course we would prefer the ending of dyarchy and the establishment of autonomy in the provinces and in the country as a whole.

Bengal (Rural) Primary Education Bill

That elementary education should be made free and compulsory for girls and boys throughout India including Bengal is a proposition which does not require any argument to establish in the year 1937 A. C. But everywhere the official objection is the lack of money. It is very unfortunate that money loses its solidity and becomes volatile and evaporable in the Indian public treasury in the presence of a warm desire in the Indian mind for education. But neither the warmth of military ardour nor the warmth of civilian avarice appears to volatilize it.

We are reminded of the fact that there is not sufficient money in the Bengal treasury for the extension of primary education by the proposal contained in the Bengal Rural Primary Education Bill to levy a cess for raising a crore of rupees for the purpose. As we have shown repeatedly particularly in our article on the subject in the last July issue, there would be no need to levy a new cess, if Bengal were given her just dues. Bengal having been robbed and cheated by

the Moston Award cannot agree to be taxed again. We are absolutely against any fresh taxation. Let our Ministers do their best to get for Bengal her dues. If they fail let them resign saying why they have resigned.

The apportionment of this fresh cess is also bad. The ryot is to pay four pice per rupee of rent and the land lord one pice. Are the ryots wealthier than the Zemindars?

The constitution of the proposed district education committees is also objectionable. The majority of members ought not to be such as would merely cry ditto to the collector.

India and the International Labour Office

Interviewed by a representative of the Associated Press about the work of the Tenth International Labour Conference Mr. G. D. Birla, Indian Employers' representative said among other things that, although a good deal of useful and quiet work is being done by the Labour Office very little has been done affecting the condition of Indian labour.

Rabindranath Tagore on Freedom

In the course of a letter addressed to Dr. J. T. Sunderland in reply to one received from him published in the *Vishabharati* Quarterly Rabindranath Tagore writes —

It is needless to say that I also dream of freedom for my motherland but I know that neither the path towards it nor its instrument and expression can be copied from the history of other nations. So long as the bulk of our people remains steeped in ignorance unable to know its own mind it can never attain emancipation for the purpose of its self-revelation in politics according to its own temperament and need.

The whole letter deserves to be read and pondered over. But it seems to us that in the picture which he draws of our country the shades are too dark and the lights are wanting. For instance he observes —

Our want of ordinary human interest not only in our neighbouring provinces, but in communities not our own, is darkly dense among us; the communication of mutual sympathy and understanding between ourselves is barred at every step by caste and communal obstructions and religious fanaticism.

This cannot be said to be a wholly inaccurate picture. But neither can it be called a wholly accurate one. Instances of Hindus working for Muslims and of the men

of one province working for those of another are not entirely wanting. There is a little mutual human interest, too.

Again —

The unreasoning acceptance of practices and prohibitions to minute details of life the complete sacrifice of individual initiative forced upon our unthinking millions by a system of social tyranny more perfectly organised than to any other country of the world the terribly efficient machinery for a wholesale manufacture of cowards and slaves constantly working in our domestic surroundings these are the powerful enemies that are in alliance with the evil star of our political misfortune. Our immediate duty is to fight them to conquer our country from the age-long domination of an intellectual and moral inertia from the crude materialism ruling in the guise of piety causing immense dissipation of energy and unmeaning suffering and degradation.

We venture respectfully to observe that as there is to some extent interdependence between social and spiritual freedom on the one hand and political freedom on the other, it cannot be said that political freedom should be worked for after spiritual and social freedom has been achieved. In fact, so far at least as social reform in some directions is concerned, it is quite clear to us that it cannot be effected without the attainment and help of political freedom. In the days of Rammohun Roy the spiritual and social condition of our countrymen was worse than now, the reign of superstition was then more undisputed than now. Yet Rammohun Roy tried to be an all round emancipator of his countrymen. He was an uncompromising fighter for spiritual, intellectual and social freedom. But he was at the same time a fighter for political and civic freedom.

We do not think any man, however great, can be quite free within unless he is also free without. Some imperfections in the personalities of some of the greatest teachers of humanity can be almost directly traced to their having not been politically free.

We repeat, therefore, that we are unable to accept the poet's suggestion—for such it appears to us to be—that political emancipation is not an immediate duty, and that it should be attempted after spiritual and social freedom has been achieved. In any case, it may be allowable for the small number of persons in our country who may be considered as free spiritually, intellectually and socially, free as other men of their class were or are in other countries, to work both for the spiritual and social emancipation of the rest of their countrymen and for the political emancipation

of themselves and the people in general, as far as practicable.

The poet concludes his letter thus —

In countries where the mind is alive and active, the different problems such as politics and economics, have their meaning. But where the mind itself is smothered under a load of dead things under the pressure of automatic habits inherited from a primitive past, all our powers must be directed towards rescuing it from the debris of a ruined antiquity. That means widespread education. Of course, we in the name of humanity have the right to appeal to our rulers to help us in this object. And yet that appeal may be in vain or ludicrously meagre to its response, owing to a parasituous budget bursting with its burden of military and political expenditure. But there is nothing except our own apathy, to prevent ourselves from utilising all our resources and organising a system of national education that will include in its function an active and direct guidance of the life of the people, helping them to realise the dignity and freedom of their creative spirit. Only when they are conscious of the real meaning of self rule within themselves, can they successfully strive to establish it over their outer circumstances.

That the mind of the people should be rescued from the debris of a ruined antiquity, and that widespread education is indispensably necessary for the purpose is undoubtedly true. But we do not think that universal education of the people is practicable without State action. And such State action, so far as our knowledge goes, has been taken only in politically free countries. Universal education by private effort is certainly a thirkable proposition. But it is not practicable. And that for several reasons. The force of character and enterprise which such effort presupposes are not found in a sufficiently large number of persons in politically subject countries, for the soul of man is dwarfed by loss of freedom. In the second place, politically subject countries are comparatively poor, and consequently a sufficient number of inhabitants thereof cannot afford to spend and subscribe enough again for education in addition to paying the usual taxes and cesses and rates, which in free and wealthier countries secure for the people free education. In the third place, in India any widespread vigorous movement for the education of the masses is sure to incur the suspicion and disfavour of the bureaucracy. The movement may not be suppressed wholesale, but the workers may be removed from their field of work, as the fate of several social workers proves. In conclusion, it may be stated that even in England and some other

independent countries, universal national education has followed not preceded the widening of the franchise and the getting of the vote by larger and larger numbers of the people. The reason is easy to understand. The aristocracy and the middle classes in all countries generally are not quite so altruistic as to confer the blessing of knowledge on the lower orders unless constrained to do so for knowledge is power and the upper classes know that their predominance would be threatened by the lower ones being educated. It was only in Japan that the upper classes gave up their privileges of their own accord. But that example is unique in history and was possible only in a politically independent country.

We do not in the least wish to discourage private effort in education. It should go on more vigorously than now. But there is no harm in knowing its limitations.

Address on Rammohun Roy

The authorised text of the address on Rammohun Roy delivered by the editor of this Review as president of a Calcutta Rammohun Roy Memorial Meeting appears in full in the October *Welfare*.

Abolition of Slavery in Nepal Again

We are glad our repeated contradictions of Sir William Vincent's story that Nepal abolished slavery under the influence of the League of Nations have borne fruit. The Maharaja of Kapurthala admitted at a League meeting this year that the League had nothing to do with it—Nepal did it independently.

Falsehood about Tagore's Ancestry

Prabasi contradicts the story given publicity to in the *Ceylon Daily News* of September 6 that Tagore told an interviewer of the *Dail Mail* (of what country, town, or date it is not mentioned) that his ancestor to the fifth generation was a son of a Portuguese. This shows to what absurd lengths some journalists can go in their invention of lies pure and simple.

Unhappy Kharagpur

There is again a probability of a railway-men's strike at Kharagpur in consequence of the lock out and so-called retrenchment, which is believed to be only retaliatory victimisation due to the last strike. There is great distress among the workers and their dependants. All contributions should be sent to the office of the All India Railwaymen's Federation, 12 Dalhousie Square, Calcutta.

Religious Outrages Act

The Bill to punish outrages on religious feelings has been passed. This places a new weapon against the press in the hands of the executive. The offence should not have been made non bailable. We have been all along against this piece of legislation and have given reasons for our opposition. The power to sanction the starting of prosecutions should have been given only to High Courts, not to magistrates, and that on the application of the aggrieved party.

Our Puja Holidays

The Modern Review Office will remain closed from the 3rd to the 16th of October current. Letters etc. received during this period will be taken up for disposal on the 17th.

INDIANS ABROAD

Buddhist Temple at Dar es Salam

On the 6th of August 1927 a large number of Sinhalese Buddhists, resident at Dar es Salam, assembled in a meeting and passed a resolution to the effect that immediate steps be taken to construct a *Vihara* at Dar es-Salam by the end of 1928. The

estimated cost of the Temple would be about 60,000 shillings. A strong Committee of 18 has been formed to give effect to the resolution. About 10,500 shillings have already been promised.

The idea is very good. We, however, should like to point out that the Committee

should specially emphasise the necessity for stimulating Buddhistic studies in Dar es Salaam. Scholars of eminence should be invited and popular lectures arranged to rouse popular interest in Buddhism. If these are not done mere building of Viharas would be of no avail.

Indian Life Vs European Prestige

We reproduce the following from the *Indian Opinion* Natal.

As reported in our last week's issue for killing an Indian child by carelessly driving her car a European woman was fined £70. Now for interfering with a European woman in an insulting manner an Indian has been sentenced at the criminal sessions to six years hard labour and eight strokes. Mr Justice Mathews remarking that he had to take a very serious view of this behaviour towards European women. Thus the prestige of a white woman is greater than the life of an Indian in the eyes of the Courts of justice in this country.

The Feetham Report Condemned

The Report of the Feetham Commission has roused great resentment among the Indians in South Africa. The following extract from an Indo-African paper will explain the situation to some extent.

A meeting of the executive committee of The Eastern Africa Indian National Congress and certain other gentlemen specially invited to attend was held at the Congress offices Nairobi on Tuesday to discuss the position created by the outcome of the Feetham Commission Report.

After discussion the following resolution was unanimously adopted.

That in the event of adoption of the Feetham Commission Report by the Local Government, the Indian community should withdraw all members from all Government bodies and also from public bodies, and mass meetings be convened throughout the country to protest against the adoption of the said report and that ultimately a special session of the Congress be called as early as possible.

The following Resolution was also passed unanimously.

In view of a letter from Mr Shamuseen Mrs Sarojini Naidu be requested to preside over the special session of the Congress and that Mrs Naidu be requested to stay in this country for at least three months.

It was resolved that the Congress be held at Nairobi sometime in the month of October 1927.

The meeting was then adjourned till next day when a memorandum to the Secretary of State for the Colonies was submitted by the General Secretary protesting against the Feetham Commission Report and this was adopted.

Indian Business Abroad

That Indian businessmen's success is at the bottom of the present white vs brown

struggle in Africa is now well known to the Indian public. The nature of the business success that is causing this inter-racial jealousy would be well realised from the following extract from an African journal.

Sisal Industry which is the backbone of Tanganyika Territory has been a monopoly in the hands of European settlers before the war. After the war when a few Indian firms ventured and stepped into this enterprise the Europeans not only thought but also declared that the Indians would never be able to succeed in this venture.

Although this industry was entirely new yet the Indian firms that undertook it doggedly stuck to their guns with the most astounding results in the recent victory at Nairobi.

All the victors that were present at the recent Nairobi Exhibition expressed complete satisfaction at the Sisal exhibits. And amongst many Sisal exhibitors of both Kenya and Tanganyika, there were hardly two or three exhibits representing the Indian Sisal Manufacturers. The judge appointed was the well-known Sisal expert Col R B Turner of Kenya.

It will be a source of pride and satisfaction for the Indians of Kenya and Tanganyika to learn that the Honours in number one fibre class were awarded to the Gomba Sisal Estate of Makumi. This Sisal plantation belongs to the well-known firm of Messrs Karimjee Jivraj & Co., and it will not be out of place to mention here that the said Sisal Estate is being so successfully run under the capable and intelligent control of Mr Abdullah M. A. Karimjee.

The judge of the Sisal exhibits Col R B Turner awarded 94 points out of a possible 100 points and his remark was that the Sisal produced by the said estate "was almost perfect in every way. Such high points—(94/100)—and so very creditable a remark tends to prove that Indians can do things creditably when they have the opportunities to do them.

Mr Srinivasa Sastri on the Empire

The *African Chronicle* vehemently criticises Mr Srinivasa Sastri's pro-Empire speeches in Africa. Mr Srinivasa Sastri is reported to have said:

Towards the British Empire India has been drawn by ties of affection, esteem and gratitude which it is impossible to describe. At first she was brought within the Empire by force now we value very greatly our position and the fact that we were born of the Pax Britannica. Now that we are fully established we can scarcely realise the terrible fate we have escaped by being drawn within the Empire. Far from in a court of law and absolutely even handed justice India has these things in far greater measure than in the best administered Indian States. Our greatest politicians believe and have laid it down in so many words that the British connection has been ordained for the good of both countries and that good has not yet been fully achieved. There is much to be drawn from this connection and we therefore take a vow that we will not do anything

which may have the remote effect of weakening this connection.

On the above the *African Chronicle* Comments as follows

The foregoing speech delivered by the Rt Hon V S Sastri before a crowded European audience in the Maritzburg Town Hall has undoubtedly created a profound sensation among the intelligent section of the Indian community but the British section is highly elated at the unwonted encomium paid by this high placed Indian official to the genius of the British race for ruling a horde of brown races scattered over the continent of India. We have always understood that the Moderate Party who now style themselves Liberals in India were sincere patriots bent on a constructive policy in the governance of the Indian Empire but it never harboured the notion that that Party is capable of entertaining such an exaggerated—nay extravagant idea of the effect which British connection has bestowed on India and to which Mr Sastri gave utterance in such superb over flow of English last week. As a distinguished official of the Indian Government and as an outstanding Imperial propagandist, Mr Sastri may be just doing his duty but in so far as the bulk of the Indian people are concerned we are afraid that the distinguished Agent-General is not giving a true reflection of the popular opinion in respect of the Empire which acquired India by force and in which they are forced to be a member against their wish. We would not have taken the trouble to give this disclaimer to Mr Sastri's speech had it not been for the fact that at Bombay just before his departure he declared that he was proceeding to South Africa as representative of the people of India. Should his Maritzburg speech be construed as the correct opinion of the Indian people, then it might lead the people of India into a more complicated position, and, therefore we have to draw prominent attention to certain misleading statements contained in the Maritzburg lecture.

Mr Sastri paints a black picture of the Indian States under indigenous rule and not really its native corruption when compared with the British Rule. This is a libel on some of the best and highly efficient administrations of States such as Mysore, Baroda and Travancore, where people obtain better justice at a less cost than the most expensive justice to be had under British Rule. Moreover one should not forget common corruption and jobbery even in British administered territories and we, therefore, fail to see why Native States should be singled out while leaving the British territory which is just as bad if not worse. Discussing about secession from the Empire, Mr Sastri waxed eloquent over the immense irrevocable benefit conferred by England and quoted Mr Gandhi as having expressed satisfaction with the British connection. But it should not be forgotten that the self same Mr Gandhi during the hey day of non-co-operation movement went about the country stirring the populace to a fury against the Salauze Government and exhorted them to long for the "Ram Raj". Indeed it is amazing to note Mr Gandhi becoming a disciple of British Imperialism alongside of Mr Sastri and the pity of it is that the great leader of Satyagraha movement in collaboration with the greatest intellectual force of Modern India and

leader of the Liberal Party should have unconsciously become active participants in an astute plan to clear the Indians out of South Africa by a slow but sure process of squeezing out policy. We can quite understand the mentality of that clique known as the phantom Congress but it is really incomprehensible to a lay mind the attitude of Mr Sastri and Mr Gandhi in relation to this Indian Agreement which is not likely to enhance their reputation for sound statesmanship. It may be for the consolidation of the British Empire he has consented to this settlement but the Indians in over seas care very little for the Empire if that Empire is not prepared to sacrifice even itself for the cause of justice and humanity. In effect the crucial test for the solidity and potentiality of the Empire rests with the solution of the Indian problem overseas and in this agreement we are afraid the Indian Government have deplorably failed.

However when Mr Sastri says that by ties of affection and gratitude which it is impossible to describe India has been drawn to the British Empire one cannot help but questioning this assertion and to say that Indian Nationalists will never subscribe to this doctrine. Because there is nothing in common between India and the Empire. During the last 200 years of British supremacy India has been sucked dry and according to Sir Theodore Morrison's work on The Economic Transition of India it has been estimated that the drain from India from 1880 to 1908 has been not less than £150 millions sterling. According to the late Wm Dugby's Prospero in British India during their tenure in India Britain has taken away no less than a hundred million pounds sterling from the great dependency without giving it any sort of adequate return whatsoever for the money thus immoderately taken. The spectacle of what the English Christians have been and are in India and Ceylon drove Mr Dugby into reluctant Atheism.

Even so great a man as the late Lord Salisbury one of the Prime Ministers of England had to frankly admit that if India must be ruled at least let it be done scientifically.

A more detailed criticism with quotation of facts and figures follows which leaves no doubt in the reader as to the empty and even counterfactual nature of Mr Sastri's compliments to the British Empire.

Mr C F Andrews also Attacked

The same journal also attacks Mr C F Andrews for having expressed certain opinions as follows

Mr Andrews, the unofficial agent of the Government of India according to an interview given to a Rand Press representative gave a parting kick to the Indian community before taking his boat to India at Lourenco Marques. This Sage Imperial Political Missionary says

He considered the central feature of the agreement to be the cause whereby Indians in future would be refused permission to introduce in the Union from India, any more minor children unless they were accompanied by their mothers

Unfold harm had been done in the past by the bad old practice of never bringing over the wives from India at all. This unfortunate habit prevailed among the Indian trading class, and it had led to inevitable demoralisation.

It was good he said, neither for South Africa nor for India.

The harmful custom had been established in the past (he proceeded) of bringing over the male children one by one just before the age of 16 in order to carry on the business leaving the rest of the family behind in India. This purely male adult emigration was being repeated in each new generation. In some Indian businesses it had gone on for two and even three generations.

While settlers from other countries were introducing their wives and thus creating a stable form of colonisation the Indian trading community had been utilising their domicile in South Africa purely for monetary purposes.

In these modern times the main trend of emigration was against such merely business use of a new country.

Mr Andrews stated that while he had journeyed up and down all over the Union and Rhodesia he had come across some very distressing examples of the demoralisation which had already set in. In Southern Rhodesia more than 80 per cent of the British Indians were living apart from their wives.

In Portuguese East Africa the proportion was probably still higher. In East and Central Africa the same evil prevailed.

The criticism offered to what Mr Andrews said is impassioned but not very thorough. We first read

That, though we do not admit the proposition which has been so sparsely laid down we want to know whether he has enquired into the reasons why such a state of affairs is alleged to exist? However we may give it for the information of the public. It is not that the Indian trader does not wish to bring his wife and children and make his home in this country there are many who are with their family here but because the Government of the Union does not encourage especially Indians to live in this country as self-respecting decent men and lead a respectable family life and that is one of the main reasons that some of the Indians are reluctant to bring their family.

As a matter of fact no traders in any foreign land carry their whole family with them, irrespective of government encouragement or otherwise. We expect with the

passing of time and the establishment of security and stability for the South African Indians and the granting to them of an honorable place in the country of their adaption, we shall see more Indians living with their wives in Africa.

The criticism then proceeds as follows

If Mr Andrews is anxious to improve the present undesirable state of affairs he should have used his influence and persuasive powers to obtain for the Indian full rights of citizenship rather than administering a dose of this parting kick to the Indian who has been sufficiently maligned in the past for many imaginary sins of his!

Mr Andrews bitterly complains about this harmful custom of the Indians but he has apparently forgotten what his own brother Native Englishmen civilians are doing in India who deserve to be sermonised a bit on the subject. They are about 150,000 Britishers ruling the country but very few of them come to India with their families and during the long period when they hold office, they drain away all the wealth from the country and when they return to their Native land in England they enjoy their pensions at home. During the period of Englishman's bachelor life in our Homeland Indians have not complained of the demoralisation of the Englishman, a demoralisation which has brought about a Firang problem in India for all eternity and neither do we complain of the Englishman utilising their domicile in our country for monetary purpose. Indians have not complained about Englishmen spending 50 million pounds sterling of their pension in England though we know that India is bleeding white by this process! However it is deplorable that Mr Andrews should have expressed his thoughts on a subject that has ramifications far beyond the present trifling issue, and, needless to say that his press interview has caused profound all feeling in the community. Whatever may be the effect of "demoralising" tendency by enforced bachelorhood of Indians due to economic and political causes brought about by the laws of this country the cause for same is more serious indeed than the remedy suggested by Mr Andrews, and therefore we venture to submit that the Government must dive a little deeper into the question before they impose further restrictions on the importation of Indians wives and children.

We expect a better and a more detailed criticism of Mr Andrews statements from the *African Chronicle* in the near future

THE DANGER OF PUTTING OFF INDIA'S SELF-RULE

By THE REV. DR. J. T. SUNDERLAND

THE people of India believe they ought to have self rule now.

They believe their freedom ought never to have been taken from them having been taken away, they believe it ought to have been restored long ago. Especially they believe it ought to have been restored to them at the end of the World War of 1914-1918, which was fought India was told and the world was told, "to make the world safe for democracy and to give freedom and self determination to all oppressed nations and peoples. If Poland, Czechoslovakia and other smaller, less important and less oppressed nations were given freedom and self rule, it seems to them extremely unjust that the same was not given to great civilized historic India.

There is difference of judgment among the Indian people as to what form they desire self rule to take,—whether that of absolute independence with no relation to Britain except that of friendship or that of Dominion Status within the British Empire like that of Canada, Australia and South Africa.

Up to the end of the Great War and a few months after the feeling of a large majority of the Indian people was in favor of the latter. As a result of events which have occurred since, there has been a change and the change is still going on. It would not be easy to say what is the prevailing feeling in India at the present time.

It is believed that the Government of India made the greatest possible mistake in not availing itself of the enthusiasm for England engendered in India by the Great War, to extend to the Indian people at that time in recognition of their self sacrifice,

their loyalty and the splendid service they had rendered in men and in money, the great boon which they so much desired and which they expected namely, freedom and home rule in the form of Dominion Status in the Empire. That would have allayed at once India's discontent settled the dark problems that now frown so threateningly in her sky fastened the Indian people to Britain with hooks stronger than steel, and saved the terrible blunders and disasters of the Rowlett Acts, the Amritsar Massacre, and all the other Punjab and other atrocities and horrors.

It is believed that then was the "psychological moment" when England, instead of acting the part of a suspicious, imperialistic tyrant ought to have treated India in the same generous, noble large minded way that she treated South Africa. Long will she have reason to lament that she did not have in that crisis time, a Campbell Bannerman to lead her in the path of honor and true statesmanship.

There is another critical time soon coming—another psychological moment. It is to arrive in 1929, when the ten years of "Dyarchy", or the Government Reform Scheme of 1919 are to expire, and when the decision is to be made as to whether the same Scheme shall be continued, or if not, what shall take its place, in other words, when the decision is to be made as to what the British are going to do for India, then and from that time on. Will they continue in the same old imperialistic way, dominating her by force giving her the least liberty possible without danger of revolt holding out promises to her as unsubstantial as a mirage professing to be educating her for self rule, without giving

her statements are made simply to deceive India and the world

The second thing to be said is, that such a deliberate purpose on her part if it exists, is simply inhuman. There is not a shadow of right or justice in it. It is neither Christian nor civilized, it is barbarian. It is nothing less than monstrous. Put in plain words it means that Great Britain *acknowledges no law higher than might*.

For myself I repudiate the utterances of these men—high officials though they are. I cannot and will not believe that they slake truly the purpose of the British nation. If they do, it means that Britain intends to hold in subjection permanently one fifth of the human race by the power of the sword for she knows she can do it in no other

way. In other words it means that she deliberately plans to be, for all time so far as she can see, the greatest *aggressor nation*, the greatest *tyrant nation*, the greatest *leech nation*, the greatest *robber nation*, the greatest *slave holding nation in the world*,—that she actually intends her future Empire to be one of *sixty millions or more of freemen and more than three hundred millions of thralls*. What a future for British men to look forward to!

Let those believe it who can. As for myself I simply will not believe anything so monstrous of the nation of Hampden and Milton of Burke and Wilberforce and John Bright.

[A chapter from the Author's forthcoming work *India's case for Freedom*]

SINCERITY AND ELOQUENCE

By HETTY KOHN, B.A. (Lond)

I

Intellectual Sincerity

The whole of our dignity consists in thought. It is by this we are to elevate ourselves and not by mere spice and duration. Let us then labour to think well: this is the principle of morality.

Pascal

INTRODUCTION

PERFECT sincerity is surely one of the greatest desiderata in human character. A perfectly sincere person honest in thought, motive, speech and action is a rara avis for one need not be a philosopher to recognise the fact that intellectual honesty requires careful cultivation. Many a person who is scrupulously honest as judged by the ordinary standards of behaviour could not claim to have attained to absolute truthfulness, genuineness, earnestness of thought and freedom from hypocrisy as included in the connotation of the word sincerity.

So intimately bound up with one another are thought and speech, that the habit of sincerity formed in the one will, in its inevitable reaction produce sincerity in the other. For this reason it is essential to begin the habit of absolute sincerity in both thought and speech quite early in life, before the

subtle poison of intellectual dishonesty has had time to destroy our power of distinguishing the true from the false.

Eloquence, the art of expressing thoughts in such language and in such a way as to produce conviction or persuasion, or of expressing strong emotions vividly and appropriately, is desired whether consciously or unconsciously, by every individual.

This desire to impress others is natural and universal not only because persuasiveness implies influence and power over others, whether employed from utilitarian or altruistic motives, but from the elementary instinct of man to wish to shine in the eyes of his fellows (observable in any child) and to be pleasing to others in daily life by his conversation.

It is the object of this series of three articles, firstly, to analyse sincerity in thought in its main aspects ranging from mental honesty in the trivial incidents of daily life, sincerity as regards views in matters of art, to intellectual sincerity in matters of religion and inter-racial intercourse, and also to examine sincerity in motive, secondly, to analyse

the nature and essence of true eloquence and to establish that complete sincerity is the necessary basis of eloquence whether in speech or writing and at the same time to point out and investigate the danger of allowing the passion for eloquent phrases to outweigh the love of thought which is truthful in the highest sense of the word—and thirdly (in the last article) to attempt a more detailed analysis of the prominent part played by intellectual insincerity and the mischievous magazine mentality in retarding the advent of an improvement in inter-racial intercourse.

Throughout the discussion the individual whom the writer has in mind as being guilty of intellectual insincerity is definitely not the unscrupulous person who deliberately modifies the truth to serve his own purposes but the conventionally upright person who prides himself upon his honesty in all the affairs of life.

(a) *In the trivial incidents of daily life*
The first time a habitually truthful person indulges in insincerity the falsehood is generally trivial enough in itself and the person tells a white lie *so seriously* in order to suit some purpose of his own. The white lie exaggeration or twisting of a fact may be intrinsically harmless and unlikely to affect anyone but when the process is repeated this slight deviation from truth paves the way for the formation of a mental habit which for the very reason that like a narcotic, it deadens the intellectual conscience of the person is well nigh impossible to eradicate. Neither will the arguments of friends carry any weight with the individual concerned, for the reason that he does not admit that he is in the wrong. On the contrary the implication that he is telling lies stings him into a kind of righteous indignation urging him obstinately to espouse the inaccurate or ridiculous statement he has made unless he still possess sufficient sense of fairness to allow his friends to shun him step by step the false mode of thinking into which he has slipped. It is not always possible for another person to know at precisely which point the individual in question ceases to admit to *himself* that he is in the wrong for even at the stage when he still feels a twinge of conscience vanity will probably not allow him to admit his lapse to others.

The individual estimable though he may be in all other ways becomes exceedingly difficult to get on with for in ordinary conversation he will make misstatements of

facts which prove greatly annoying to those around him. His plea that the matter is too trivial to warrant discussion and that insistence on the accuracy of details is pedantic is merely a symptom of the mental disease for such it is to which he is a prey for just as the man who commits a petty theft with complacency will sooner or later steal a lakh—if circumstances are in his favour—even so mental insincerity in trifles will if unchecked lead the individual by imperceptible degrees to serious misrepentations.

A few illustrations from the writer's personal experience are here given.

Case 1 A young lady shorthand typist (whom we shall call typist A) told her two colleagues that she had once swum half a mile and that this was her maximum achievement in swimming. A few weeks afterwards referring to the *same achievement* she stated the distance as one mile. One of the colleagues commented on this discrepancy the second colleague corroborating that she also had understated the distance to have been half a mile. Typist A indignantly protested that she had swum one mile and that she could have had no reason for stating the distance as half a mile. Several months after this typist A again referring to the *same achievement* gave the distance as one mile and a half. The writer believes that typist A had by that time thoroughly deluded herself into the belief that she had really swum a mile and a half—whereas her original statement was in all likelihood the correct one.

Case 2 When the writer was staying at the house of friends the water was bad during a part of the hot weather and it was agreed to drink as little of it as possible. The family however drank tea made of this water as usual morning and afternoon. The writer who was not in the habit of drinking much tea, was thirsty one day and indulged in one glass of cold (boiled) water. In view of the fact that the others were drinking three or four cupsful daily of the same water though camouflaged with tea and mixed with milk their angry reproaches at the writers' "wrong and foolish action" were unreasonable and inconsistent though amusing from the psychological point of view. As they were highly educated people there was no question of their failing to appreciate the fact that the tea was just as injurious as the cold water. In this case the stupid inconsistency can be traced to a mere lack

of imagination. Being accustomed to regard their cup of tea as a *sine qua non* of existence they regarded it as a necessary evil to drink tea even though made of injurious water but viewed the water in its pure form (even *ekach piala* 'a' as a luxurious cold drink.

Case 3. The writer overheard an English woman who had been living in India for some years telling an Indian that in the gymnastic lessons in English schools the girls walk at some height from the ground on a thin rope. This was during a conversation in which the Indian had argued that Indian children have greater balancing power than European children. The Indian gentleman in question was likely to incorporate the gist of these remarks in some articles of his. For this reason the writer struck by the gross inaccuracy of the above statement on the part of the Englishwomen (all the more remarkable as she was an *exteacher*) interposed suggesting that the lady had evidently forgotten that English girls walk never on a rope (ropes are used only for climbing and jumping) but on the flat edge of the heavy horizontal wooden bar about one inch or one inch and a half in width (the rounded edge of the same bar is used for the exercise known as travelling in which the person hangs on to the bar by the arms and travels from one end of the bar to the other). This exercise which in itself needs much practice and considerable balance is not nearly as precarious a feat as walking on a rope which in Europe at least is performed only by professional athletes. To the writer's amazement the lady adhered obstinately to her rope walking, theory even when details of gymnasium routine were recalled to her mind. So treacherous a thing is memory!

Case 4. An incident of the early school days of the writer is indelibly impressed on her mind as some incidents of childhood are apt to be clearly as though they occurred but yesterday with every attendant detail and even an exact memory of the actual words spoken and the tone in which they were said (though other events of the same distant period are long forgotten). One morning just before Christmas a class mate (aged seven years the same age as the writer was then) who happened to be the daughter of a very well known manufacturer, said to the writer while changing shoes in the cloak

room. I wanted to ask you to my Christmas party but my mother says I mustn't. Why mustn't you? asked the writer. Because you don't come in to prayers' (the writer was the only Jewish child in the kindergarten). The injustice and senselessness of this exclusion from the party impressed the writer who related the incident to her mother. The comment of the writer's mother is clearly stamped on her memory. I am very sorry about the party, but it was very wrong of you to have asked *M* why her mother did not wish to invite you. You must never do so again. This incident has often been referred to since, in the writer's family, as an example of stupid intolerance. The writer's amused surprise may be imagined when recently she overheard a relative (who at the period of the party incident was twelve years old i.e. a big girl in the same school) relating the anecdote to a friend quite seriously asserting that it was to herself (i.e. the relative) that *M*'s remarks had been made. Even after the writer's protest, she adhered to her own version with some embroidery added on the spur of the moment.

The value of the anecdote as an example of intolerance of course remains but it is the actual experiencing of how inaccuracies and anachronisms arise which makes us realise the extreme need for the utmost caution with regard to historical records of any kind.

Case 5. A lady experimenting in the kitchen hit upon a new and economical way of using dates in the making of a pudding. The pudding was voted popular by the family, and was made many times. A few weeks after the lady's sister exclaimed spontaneously in the course of a meal. How lucky that I thought of this date pudding! The inventor of the pudding looked in amusement at her sister thinking this was a joke. The other members of the family, too who well remembered with whom the idea had originated were highly amused but for the moment the sister was really under the impression and insisted, that the pudding was the child of her own brain. When the circumstances had been recalled to her mind she suddenly remembered apologised and joined in the general mirth.

Case 6. A young lady was prior to and during the early part of the world war engaged to be married to A. Subsequently her engagement to A was broken off, and she became

about (with the exception of "evening dress") in short frocks, low neck or sleeves displaying more than the wrists. The phenomenon is that people persuaded themselves of their virtue and high morals in this matter of dress, and that a mother who detected any tendency in her daughter to dispense with the exceedingly uncomfortable stiff high collars felt serious concern at the frivolous laxity of morals this implied. Morals may indeed have suffered a change during the last few years to account for the change in fashion in this respect, but it is more plausible to attribute the above mentioned phenomenon partly to the inherent dislike of man to think things out and partly to his desire to put the best possible construction on his actions.

The desire to keep up appearances, and to conceal the fact of our poverty from the outside world, leads to self-deception as regards our motives. We may resort to a certain practice from reasons of economy, and, making a virtue of necessity, persuade ourselves that we are doing it from altogether different motives. It often happens, indeed, that what was at first a painful necessity becomes a pleasure, but we need not on that account delude ourselves, nor feel ashamed of our lack of worldly goods when that lack is due to no fault of our own.

On the contrary, it is the self-deception which should be abhorred.

In your book on Education you praised a certain school of one Miss McWilliam. Do you propose to start this school of yours on similar line? I asked

"Yes it is a very good school for the children I think," he replied, "but it is intended mostly for poor folks."

"And yours?"

"Mine is meant—well—for the middle classes—that is for those who can pay for their children's education," he returned.

"Do you think that schools should be run separately like that?"

"I don't—but you see an elementary school is such an expensive undertaking that only the State can hope to tackle it successfully. A private person who is not rich cannot quite afford such a big expenditure."

"Why? Don't you think that such a school can be self-supporting?"

"Not if it is meant for the poor. So it comes to a paradox really that if one isn't rich one has to start a school for the rich."

Mr Russell laughed and I joined. He always enjoyed his own jokes quite as much as the others.

"So that's why you go to America?"

"Yes, I should not have ever gone there otherwise."

"But can't a school for the poor be run except with the help of the State? Supposing you succeeded in getting together some rich men."

"Ah! but there's the rub," he smiled. "If you want the rich men to come out with their donations they will like to impose their own conditions, won't they? That is to say they will insist on having their way in the regulation of the educational policy and that will be disastrous."

"Why? I asked, "they might want sensible things too, mightn't they?"

"No. What the rich will want will always be bad; you can depend upon it," he retorted.

We laughed.

"Besides, why should the rich people come out to oblige me with their funds when I have never obliged them by standing up for their heartlessness?" he added, smiling.

We laughed again.

"In Mr Wells's latest book called the Undying Fire, I said, 'Kerouac has emphasized these difficulties, namely the difficulties that an educational reformer must encounter in a school which is run by rich men. They al-

ways will poke their nose into the scheme for education,' he says, and the result will be that no substantial advance can be achieved."

Yes, I have seen that book, said Mr Russell, and he is quite right, I think. So I fear it will be idle for a long time to come to expect any but lip-deep sympathy from the rich in this connection. The only practicable way of effecting such reforms is therefore to stir up public opinion so much as to force the State to take up the advanced schools in the teeth of their opposition.

You don't seem to have particular faith in the goodness of human nature, Mr Russell. I said, smiling. I remember having read a cynical remark of yours in your Problem of China, that human nature in the mass does as much good as it must and as much evil as it dares.

I said, human nature in nations did not, I asked, he smiled.

No, you had said human nature in the mass if my memory doesn't fail me.

He smiled.

But if you have no faith in the goodness of human nature, then what hopes can there be in your advocating stable reforms in remoulding and remodelling the character of people by education? I asked.

Well, I don't think that human nature is either good or bad, really. Man has to be egotistic like all animals for the sake of his self-preservation. He has therefore to hedge himself in with certain formulas which he thinks are likely to stand him in good stead. Hence if you can offer reform schemes which do not run counter to those formulas you may just be able to get a few things done.

The lunch bell rang.

Mr Russell led me into the dining room. We sat down at the table as Mrs Russell came in. Mr Russell's son John (aged five) sat next to me and his little daughter Kate (aged three) sat opposite me.

Mr Russell introduced me to John. He is an Indian gentleman, Johnnie. The boy looked at me with deep misgivings.

Do you know anything about India? I asked my little friend at table to my right.

"Oh! yes," he said, "I have got a feather in my beard, see, like a Red Indian."

"But that is America, Johnnie," said Mr Russell. "Mr Roy doesn't come from there."

But the Red Indians shouldn't be in

America, they should be in India." John ejaculated incredulously.

We laughed at his evident discomfiture.

"Yes, that's rather puzzling I admit", said Mr. Russell laughing, "but Mr. Roy isn't quite red, see, is he?" So how can the be a Red Indian?"

"Then I'll be a Red Indian," he put in with rather baffling logic, "I will put on that wicked dark coat of mine and kill him. He looked solemn as he gave expression to his invincible resolution."

Children are not exactly pacifists are they? said Mr. Russell laughing.

"No, I wonder why though!" "Well, fighting has been ingrained in our blood for ages for self preservation, you see," replied Mr. Russell.

But cannot pacifism be made to be as ingrained in the child by careful inculcation? I asked.

Well, it is difficult, said Mr. Russell, "you see pacifism is too sophisticated a growth—and a much too recent one at that—to be able to appeal to an unsophisticated child. So success in such a matter cannot come in a day."

"He wasn't however so militaristic before!" said to me Mrs. Russell later, when we had moved into the drawing room, but you see we had a Bolshevik boy at our house recently—the boy of Mr. Rosengolz, the Russian Foreign Charge d'Affaires—and he preached militarism from morning till night. John has imbibed it all from him."

"So this boy got the better of your pacifism," I asked.

The children Mr. Russell told her we two would join them later on the sea beach.

"What do you think of England's late rupture of diplomatic relations with Russia following close upon the heels of the Arcos raid?" I asked as soon as we were alone.

"I think it is mad."

"Do you think Russia's recent activities in China have got anything to do with it?" I pursued.

"Undoubtedly. And we might be on the brink of a war with Russia at the present moment had it not been for the fact that France does not want it just now."

"What do you mean?"

"Well, you see, England is continually inciting Poland to a war with Russia. But Poland has always looked up to France as her guardian angel and France isn't now particularly keen on a first class war with Russia—at least not just at the present moment."

"Your prophesy in your 'Prospects of Industrial Civilization' that the next Great War is going to be waged between Asia with Russia at its head and the West with America at its head is very sound I think," said I after a pause. "For, see how Russia is helping China now."

"Quite. And I think Russia will help India too. At least it is the only great nation that has any interest in doing so."

"Why?"

Why, to undermine us of course. There is no love lost between modern Bolshevik Imperialism and British Imperialism, don't you see.

But you don't mean to say that the Bolshevik Imperialism isn't inspired by any ideals?"

"Of course every Imperialism is inspired by very lofty ideals," said he cynically.

You don't mean to say surely that we are any behindhand in the matter of proclaiming the loftiest of ideals even when our Imperialism leads us to commit the worst of atrocities in your country?"

No, but surely Mr. Russell, you can't put your Imperialism under the same category as that of Russia. I objected. "For, don't you believe Russia does have some real ideal—in a truer sense of the term? The proof is that she is bound to influence the world of the future more than your so-called ideals of British Imperialism. What about Communism?"

"Well I admit your contention that Russia

is going to influence Europe and the world in the near future. In their hating out religion for example in their crying down the Church for example and in many other things they are to day the vanguard of progress in the West. But a real Communism I must say has failed there—at least for the present any way.

It may have now. But don't you think that when they will have trained the new generations of boys and girls they will change the face of the world?

"I doubt that," said Mr. Russell dubiously. "When you inculcate overdoses of some doctrines in the boys and girls they grow up to espouse such views as run directly counter to those very doctrines. Christianity for example painted in glowing colours the charms of submissiveness didn't she?—and look at the result in Europe."

Do you mean to say that the inculcation of definite views and beliefs cannot mend matters substantially? I asked. What hope is there then in your educational projects?

Well there are some beliefs which do matter. Christian beliefs have been operative in the effleeting of the absurd divorce laws as well as the prejudices against birth-control but have not made pacifists of us exactly have they? The fact of the matter is that only such beliefs of religion happen to influence our action as are bad.

We laughed.

We started out for a walk.

Y' mean to say Mr. Russell that beliefs don't influence conduct? I said as we came out of the house.

"Well you see our belief as well as conduct are in no way the result of our temperament. That is we act in certain ways mostly because our impulses propel us in that direction according to our respective temperaments. At the same time this temperament induces us to formulate certain beliefs to induce those acts. So beliefs are in general not the motive of our actions really."

Do you mean that if our beliefs were changed our actions wouldn't change much?

Yes our actions would usually change too. Because beliefs are immensely modified by our circumstances and changed circumstances will also change our actions.

"But don't you think that some of the noblest of men and best of personalities have been the products of religious beliefs or mystic beliefs if you will?"

"Well I think that the finest of men are found in equal number if not in greater among the irreligious. When of course the majority of men in any country are religious a greater number of fine men are bound to be religious by pure rules of probability. He smiled. But that isn't because it is religion which has produced the fine men, he added on the contrary I should think. For on the balance I should think that religion has rendered the world definitely unhappier than it would otherwise have been."

What about the religious mystics who preached some of the loftiest of maxims from their mystical illuminations and ecstasies? I asked.

Well I believe in the ecstasies as data of definite experience but when they imply vision I cannot accept them. For the lofty principles are by no means the results of these mystical illuminations. As a matter of fact such ecstasies render the mystics distinctly selfish.

How?

Because through such mystic transports they become more and more subjective and get more and more loth to a healthy life of varied activities and lose interest in things for themselves. Consequently their joys tend to become more and more similar to the joys of the voluptuary or the drunkard.

You don't say so Mr. Russell? I exclaimed.

I do really. For I see no reason why the religious mystics should not be placed more under the category of drunkards than under the category of prophets.

But think of the sacrifices they make for their joys—the sufferings they cheerfully accept for their goal are they nothing?

"So does the drunkard. He undergoes a great deal of hardships too—doesn't he—often throwing his hard earned money away and making himself and even his beloved friends and relatives suffer. Doesn't he?"

We laughed.

What would you say of Buddha then?

"Well his enemies said that he lived on the aim of the pious—which was rather an easy life too wasn't it? But yet I must confess I like him better than all the other religious figure in the world put together."

"Would you prefer him to Christ?"

Any day I am convinced that Christ has done far more harm than good to mankind."

For you see he had observed the habits that are instilled into children very early die hard. Such deep seated habits must be the most difficult to eradicate later on once they have left their imprint on their impressionable trustful mind and body.

While Mr Russell swam I sat on the sand near Mrs Russell who was perched on a boulder. We talked casually about a lot of things. Incidentally I said

"In your Hypatia you have remarked Mrs Russell, that the difference between the nature of man and woman is much less fundamental than it is made out to be. But I wonder if that is quite true. For don't you think that women need love in a sense more fundamental than men."

I don't think so she said. I admit that up till now women have had scarcely any thing but love and motherhood to look to—since they have been debarred from taking an interest in men's work and activities. But it does not follow that given opportunities and training they may not take as keen an interest in life and thought and other disinterested activities.

"Don't you think that they want children more than men since the energy that she must expend to bear a child must be tremendous?" I asked.

I don't think that facts of to day tend to prove what you say she said. For I find daily that the modern women who don't want children are gaining tremendously in number. It is to me even disconcerting sometimes.

"But don't you think it is more due to the fact that most women have their health shattered owing to their having had to bear too many children and that often at very short intervals?" I asked.

"There is much in that," she said. I have seen among the poorer classes that a mother often doesn't know what a good night's rest or a period of fine health is. Consequently they come to forget what joy of life means. Therefore as often as not they come to hate children. Otherwise I think most women could be pronounced to be fond of children if they had one or two of them. Not till then will women be found to be able to take as much interest in so many different activities that are healthy and good.

She discussed the advisability of birth control among other things repudiating it

as absurd that sex without children must be sinful.

A little while later Mr Russell joined us. He sat on a boulder next to Mrs Russell.

I would have hated children for instance if my husband wanted me to bear children every year. I might perhaps have left him in the end for that she added.

I wonder why people should be so opposed to birth control when they see and often feel pained to see their wives health shattered by too frequent conceptions. I said.

You see said Mr Russell animatedly. We have to thank religion for that. That is why I said that religion is one of the most heartless means of making people miserable and helping those to pass for respectable who would otherwise have been castigated as criminals.

Do you really mean it?

Quite for don't you see that a man who makes his wife bear him a child every other year thus ruining her health is nothing short of the most heartless criminal?

But doesn't he suffer too?

No most assuredly not said he more warmly. If he says he does I would tell him he is a liar or hypocrite. For the plain fact is that he simply forces his wife to be miserable and shattered in health for the sake of his own sexual pleasure. And it is religion which stands by him in his brutality simply because he conforms to its sleek hypocritical codes of morality and senseless dogmas.

But you mean to say he doesn't necessarily love his wife or feel for her?

He loves only himself. It can be easily proved. Suppose society were to legislate that if he were to make his wife bear a single child to the detriment of her health he would be put to death by slow torture do you think he would have forced his wife to bear him children against her will year after year?

I was silent.

But you see what he does in effect is simply to condemn his wife to death by slow torture—isn't it? And how does he manage it with impunity in a society of human beings? Simply because religion continues to applaud him and he thinks self complacently that birth control is sinful.

But I wonder if it is religion really which is responsible for it all, as you say.

continued. Gradually however, as the British people became interested in the Indian Service, a public feeling grew against this patronage system. And when after 1833 the commercial monopoly of the Company was absolutely abrogated and it became in the eyes of the people nothing but a 'patronage bureau', the agitation became more vocal and grew in greater volume and strength. At length in 1853, when the Charter of the East India Company was for the last time renewed, the Directors were deprived of this patronage and the principle of competitive Examination was initiated as the only channel of appointment to the Indian Civil Service. A commission, of which Lord Macanlay was the president and Benjamin Jowett, the late master of Balliol, the most distinguished member, worked out the details for this new system of recruitment. And from the next year, the 'competition wallas' found their opportunity to enter the most highly paid service in the world. Patronage system was still then in vogue in the Home Civil Service and it continued for some fifteen years more. Unable, therefore, to enter the close preserve of their own Civil Service many of the brilliant British youngmen fought their way into the Indian service. As however, the avenues of the British Services were thrown open, as improvement was made in their emoluments and as the commercial houses and farms also began to recruit their officers, from Public School and University men the flow of first rate merit to India was checked and for a good long time past only third rate men have come down to this country. Sir Abdur Rahim in his excellent minute of dissent in the Ishington Commission Report has ably dealt with this aspect of the Indian service problem.

In 1858 when the territories of the East India Company were transferred to the crown, the Company's civil service became his Majesty's Indian Civil Service. The Secretary of State for India in Council became responsible for their appointment and service conditions. Along with this transfer, an emphasis was also laid in the queen's proclamation on the question of the appointment of Indians to the higher services. Already in 1833 when the Charter of the East India Company came to be renewed, a declaration was made that the Indians would not be debarred from higher appointments. But for full twenty five years this remained a dead letter. The Company swallowed its own words and made no effort to initiate the

"natives" into the conclave of their servant-rulers. In the sixties and the early seventies a handful of Indian youngmen ventured out to England and through the one door of competitive examination entered the civil service. This was merely a drop in the ocean and could not solve any way the wider problem of the appointment of Indians to the superior services. Accordingly in 1870, a haphazard measure was passed by the British Parliament. This because the Government of India Act 1870. It provided for the starting of a statutory civil service in India. It was intended that Indian gentlemen, admitted to this service would be given some high executive and judicial posts hitherto reserved for covenanted officers. This Act, however, remained pigeonholed in the Indian secretariat for full nine years. The Government of India influenced by the British Civil Servants was opposed to it and kept it in abeyance. Meanwhile a step, taken by Lord Salisbury had the effect of practically shutting out all Indians from the superior Civil Service. He brought down the age of the Civil Service probationers to nineteen. But it was simply impossible for most of the Indian candidates to compete at so low an age. Naturally a serious agitation was set on foot against this measure in India. Throughout the length and breadth of the country meetings were organised and deprecatory resolutions passed. Now in order to take away the wind out of the sail of the Indian agitation, regulations were framed by Lord Lytton a Government in 1879 for bringing the statutory civil service into being. In the next year some appointments were made to this service and for some years the recruitment was continued the total number coming up to sixty nine. The status of these officers was, however, lower, their prospects less bright and their powers more circumscribed. Naturally this service did not meet with the full satisfaction of the people. Nor was the Government very eager to maintain it. The Public Services Commission of 1886-87 recommended its abolition and the Government of India acted up to it. This commission also recommended the reorganisation of the uncovenanted services. The name 'uncovenanted', was to be given up and the 'Provincial Service' was to be the new christening. There was to be a selection grade in this 'Provincial Civil Service' and men promoted to it should be stationed in some superior posts, set apart for them and to be commonly known as 'listed posts'. It

is only gradually that the commercial monopoly of the Company was broken and the administration of the country became its main business. The functions of Government however during the East India Company's regime were limited in scope and narrow in outlook. The work of the Government consisted only in building up the administrative machinery the collection of revenue and the maintenance of some sort of law and order. The old Governmental system had absolutely broken down and the lack of governance was the one pre-eminent feature of the time.

Now the country to be of any benefit to the foreign conquerors must be thoroughly organised and systematically governed by a well established administrative system. And it was this system that the civil servants now set about rearing up. It was not of course an easy job to build up an efficient and enduring administrative structure where none existed and it bears high testimony to the organising capacity originality of thought and driving force of the civil servants that they could fulfil their task so satisfactorily. An official hierarchy connecting the Governor General at the top with the humblest Tahsildar and Police man at the bottom was set up. The administrative units—the province, division and district were carved out

Roads were opened better facilities for communication were to a certain extent established. In fact the backbone of the modern Indian Administration was built up by these civil servants of the first half of the nineteenth century. This stands certainly to their credit. But the circumstances under which they worked should also be taken into account. The conquered people at the moment were absolutely depressed. Public opinion was conspicuous by its absence. The white officers could do whatever they thought best. New experiments could be made with impunity even at a great cost to the people. The natives suffered much but suffered always in silence. They did not know how to grumble aloud. This gave the Government officers a free hand and they could bring into full play their creative originality. They imposed upon them any administrative system suited to the best interests of the foreign Government. This gave the company the right instrument for governing the conquered people and exploiting them as scientifically as possible. This also no doubt gave the people the by-product of law and protection—

protection not against the most unjust and excessive demands of the state but that against private intruders. Still when all is said the fact remains that the rearing of the administrative system of the introduction of the first principles of Government in British India constitute the most enduring achievement of the I C S.

So long the civil servants were recruited by direct nomination in England. The relatives favourites and henchmen of the company's Directors were alone in a position to get into the Indian Civil Service. Till the end of the 18th century they came out to India without any special preparation for their future work. Nor had they any general training in the Arts and Sciences of the West that would discipline their intellect broaden their knowledge and outlook and enable them to pick up at short notice the special requirements for their duties in India. Of course even this defective system of appointment produced officers like Charles Metcalfe and Mount Stuart Elphinstone. But still Lord Wellesley the Governor General thought it wise in 1800 to establish a College at Fort William that would give a comprehensive training to the new recruits to the Indian Civil Service before they actually knocked upon their administrative career. The Company's Directors however did not approve of the whole plan of the Governor General. The College at Fort William was shorn of its important branches and it continued its existence for several decades more only in an attenuated form.

While however this plan was rejected the able minute of Lord Wellesley had brought it to home to the Directors that some kind of thorough training for the Indian recruits was absolutely called for. Accordingly a well equipped College at Hailebury was started in 1806. And all the nominees of the Directors for the Company's Civil Service must pass successfully through the course of this College before their actual appointment. The products of this College the Hailebureans as they were called did much of the spade work or Indian Administration and contributed more to the reconstruction of the Administrative system than any other body of men. James Thomson John Lawrence Richard Temple and Alfred Lyall were the chief representatives of this order. Thorough bred bureaucrats they were all. But their efficiency in work was also unquestioned. For about half a century this mixed method of recruitment

was provided that one sixth of the total number of superior stations in India should be so filled. At the time the Lee Commission began its work there were 700 superior posts in all the provinces taken together. And one sixth of these 100 hundred and sixteen, should have been listed posts occupied by men promoted from the provincial Service. But the Government had set apart only eighty eight such posts, the remaining twenty eight stations being also filled by I C S officers.

Now this principle of promoting provincial service men to superior responsible posts meted out of course some amount of justice to them. But the method has its drawbacks from more than one point of view. The provincial service men are promoted to these stations only at the lag end of their career. Nor when promoted, are they made members of the Indian civil service. In other Indian services e.g. Education, Forest etc. a man raised to the All India Service is absorbed in its cadre. He enjoys all the privileges, exercises all the rights and takes all the responsibility of the All India Service. The promoted provincial Civil servants however, are only on a special grade. They remain provincial Civil Servants still with all its implications. Again the age at which they are raised to the selection grade handicaps their future prospects. They cannot aspire to rise higher than the positions of the District Magistrate or the District Judge. Besides used to work for a quarter of a century only in an inferior capacity, they lose much of initiative and drive so much needed for responsible posts. Truly a British Civil servant has observed: Responsibility is a thing you cannot exercise unless you practise when you are young. It is therefore, a salutary principle in the British Civil Service that men qualified to be promoted from the second grade to the first grade are given this lift at the eighth or ninth year of their service. They still remain young, energetic and vigorous and can easily accommodate themselves to the new environments. But in India, the officers are raised to a responsible post only when they attain their senility and it is, therefore, not unnatural that they should make square pegs in round holes.

But whatever the value of these listed posts the Government wanted, by their introduction only to conciliate Indian public opinion. This was only a sop to the agitators. The Indians have been too poorly represented in the superior Civil Service. On the first of April 1913, out of

a total of 1511 men there were only 63 Indians and Burmans in the Indian Civil Service, the Indian representation being only five per cent. "Under the Montagu Chemsford Scheme the ratio of Indian recruitment was fixed at 33 p. c. rising by 12 per cent a year to 48 p. c." The Lee Commission has recommended that twenty p. c. of the superior posts should be set apart as 'Listed posts' for the promoted provincial service men. Of the remaining 80 p. c. vacancies, 40 p. c. is to go to the whites and 40 p. c. to the Indians directly recruited to the I C S. This arrangement is to continue up till 1939 when the Indians in the I C S plus the Indians on the provincial selection grade would equal the European members of the superior Civil Service. As to the recommendation of setting apart twenty per cent of the superior posts as 'Listed posts', no Act however has yet been passed by the Government nor has any declaration been made to that effect.

The Indian Civil Service has not only constituted the Executive branch of the Government and controlled the Legislative wing, but has also to a considerable extent formed the judiciary in the country. To day excepting some 'Listed posts' and some High Court Judgeships, all the higher judiciary is manned by the Indian Civil Servants. In England, the judges are appointed by the executive from among the lawyers of at least five years standing. The Ishington Commission also recommended that in India forty higher judicial posts should be filled by direct recruitment from the bar. But the Government have been slow in giving effect to that recommendation. In Bengal up till now only three posts have been so filled. Sir Reginald Craddock has put forward some arguments in the Lee Commission Report against this principle of direct recruitment from the bar. This, he says, would prejudicially affect the prospects of the provincial judicial service which is also recruited wholly from the ranks of practising lawyers. This argument however holds little water. That only practising lawyers of some years standing should be appointed to fill the judiciary is the one principle to be adopted. Whether the district judges and Munsiffs should form the same cadre or they should be differently and separately appointed and form separate cadres is only a question of detail. From the bar to the bench is the natural elevation and lawyers in every country look upon the

Judgeship as the trophy of their career. It is high time that the Indian Civil Service men should be absolutely debarred from intruding on this reserved ground.

The introduction of the Reforms has again brought into prominence a most important constitutional question. The Act of 1919 has made the popular ministers responsible for the administration of certain departments in the provinces. It also fore shadows complete provincial autonomy in the near future in which the ministers alone would be responsible for the total provincial administration. The ministers are here responsible to and removable by the local legislative councils. The old principle of responsibility to the Secretary of State and ultimately to the British Parliament is here abandoned and the new principle of ultimate responsibility to the electorate is sought to be established. Now to discharge this responsibility, the minister must have a secretary and subordinate officials who will give him implicit obedience and unflinching loyalty. But to ensure this loyalty the relations between the minister and his assistants should be so adjusted as to make these officials ultimately responsible to him alone. Their appointment, suspension, dismissal and promotion should be determined by him. But the relation between the minister and the Indian Civil Service which forms the back bone of the Indian administration is the exact negation of this salutary principle.

It is the I. C. S. men that act as secretaries to almost all the departments of the provincial and central governments. As sub-divisional, district and divisional officers again, they are responsible for administering not only reserved but also to a great extent, transferred subjects, but these men are appointed by the Secretary of State and are ultimately responsible to him for their official work. Now as secretaries to the transferred departments they may disagree with the minister and approach the Governor, over the head of the minister. The minister is thus placed in a most unenviable position. He is responsible for the proper administration of the department to the legislative council. But his secretary, who is responsible for his work, not to him nor to the legislature but to the Governor and ultimately to the Secretary of State, may obstruct him in his work, far from loyally carrying

out his policy. The minister cannot enforce their obedience to him. He has practically no voice in the matter. He can only make a pathetic appeal to the Governor. But beyond it, he cannot do anything. The Indian civil servant we thus see, with his extra provincial and even extra Indian loyalty and responsibility cannot make a truly efficient assistant to a popular minister. Again it might be argued that for the execution of the 'reserved work' their service is still called for. But it must be borne in mind that total provincial autonomy will not be long to come. But the new men in the service are being recruited for a period of about 30 years. If therefore the recruitment is totally stopped even now for about 30 years, more these obstructive officers will be in the field. The mischief is thus being done every day, and sooner the inflow of fresh recruits is stopped the better.

In these days of rapid communication, the secretariat control over the district officials has developed enormously. The divisional commissioners, and the district officers have no longer the initiative that they exercised decades ago. Faced to face with any serious situation they cannot proceed to tackle with it without previous instructions from the secretariat. This is of course quite in the fitness of things. Officers not the least responsible to any local body should not be given a free hand in the moffussil at this hour of the twentieth century. They now practically do only the routine work. With the growth of public opinion their powers would be more circumscribed still. And the bit of initiative and enterprise they have to show now can easily be expected of the Deputy Magistrates. In fact, there is no distinction at present between the work of the provincial service men and that of the 'Heaven-Born' officers. But there is the world of difference in pay and allowances. A first grade European I. C. S. District Officer is paid all told over 2,800 Rupees a month which sounds only fabulous in a country with Rs. 52 as average annual income per head. The work he does, however, can easily be discharged by a first grade Deputy Magistrate with a monthly salary of 800 rupees. As to the Divisional Commissioners who under the new scheme get at once Rs. 3,200 per month the Retrenchment Committee of Bengal has urged the abolition of J. S. They are now

simply redundant officer, acting as the post office
The work of the Indian Civil Service has

run its course It is now only an anachronism
It is high time that it should go lock stock
and barrel

Conference (1921-1922) on the question of battleships. However Japanese statesmen made it clear that they would not subscribe to any agreement which would involve large construction programme. This attitude of the Japanese Delegation gave them a distinct position of advantage. If an agreement could have been arrived at, it would have been advantageous for Japan because this would have afforded a greater security to her than any programme of naval competition with the Anglo-American Powers. The failure of the Conference meant a real defeat for Japan.

Many publicists and politicians think that, as after the failure of Lord Haldane's Mission to convince the German Government not to build a navy which would challenge British naval supremacy, Anglo-German rivalry took an acute form similarly the failure of British efforts to come to an agreement with America would result in Anglo-American rivalry with a far-reaching consequence in World Politics.

In support of the above possibility they point out that in Great Britain a section of very influential press such as the *Morning Post*, *National Review* etc., is advocating the need of renewing the Anglo-Japanese Alliance. On the other hand they see that in America movements are on foot that larger number of cruisers would be built in conformity with the American programme of "a Navy Second To None".

But it is my firm conviction that there will be no serious breach in Anglo-American relations because for the best interests of the British Empire British statesmen will make a compromise with America, if necessary on American terms than creating any real possibility of Anglo-American hostility. British statesmen know well that during and after the World War, America could have outbuilt Great Britain if she only kept up her construction programme of 1916, which was on the way to completion, but America showed her good will to Britain by advocating a programme of parity while Great Britain gave up the Anglo-Japanese Alliance, hoping to secure American support and co-operation in World Politics. In 1921 British statesmen fully realized that American support would be of greater value to Greater Britain than anything else and at present the situation in World Politics is such that Britain cannot follow a policy which will alienate America.

It is true that after the failure of Lord Haldane's Mission to Germany, Britain took the leadership in bringing about isolation of Germany. She succeeded in her efforts and with her victory in the World War, through American support destroyed German political and commercial ascendancy. However, if British statesmen wish to bring about destruction of the United States they are doomed to fail in this effort for the reason of the unsailable position of America as a World Power and the unfavorable position of the British in World Politics.

American position in World Politics is stronger than the position of Germany before the World War in every respect—in man power industrial power economic efficiency strategic position and potential strength. Unlike Germany America cannot be effectively blockaded or starved. But American financial pressure may bring about bankruptcy of Great Britain. The British Empire single handed cannot fight America and there is no prospect of Britain's getting support from other Powers against her in a combat between Great Britain and America, it is safe to say that some of the British dominions, especially Canada and South Africa will refuse to fight against America. If Canada, to please Britain pursues a hostile policy the United States could without much difficulty conquer her.

Today the British position in World Politics is far worse than it was at the time of failure of Lord Haldane's Mission. The existence of the Triple Entente was a great security for Britain but that is a thing of the past. On the contrary there is a serious Anglo-Russian rivalry and breach of diplomatic relations. France is friendly to Britain and is in accord with her African and colonial policy so long as Britain does not upset the French position in World Politics. But France does not fully trust Britain, for the reason the British are suspicious towards French air-forces and sub-marines and British statesmen are seeking Italian co-operation in the Mediterranean and the Near East. Italian diplomacy is opportunistic and it is certain that Italy would not support Britain in an Anglo-American conflict. Britain is trying to win Germany to fight her battle against Russia, but so far she has failed. There is no reason for Germany siding with Britain against America. In fact if ever Germany chooses that course it will be dangerous for her for the reason that France and her

European Allies will certainly side with America against Britain. In an Anglo-American conflict Soviet Russia will attack Britain in Asia.

Today there is no Anglo-Japanese Alliance in existence. On the contrary the Japanese do not want to renew any alliance with Britain because it would seriously prejudice their relations with Russia, China, Turkey, the United States and even France. Japanese statesmen feel keenly that Britain, to win American support voluntarily gave up the Anglo-Japanese Alliance which might have led to isolation of Japan. They resent and look upon with suspicion the British policy of strengthening the *Singapore Naval Base* which might be effectively used against Japan. Japanese statesmen will prefer to adopt a neutral course in an Anglo-American conflict.

Position of Great Britain in Asia—in the region between Egypt and China—is not as secure today as it was in 1911. Because of the existence of the Anglo-Japanese Alliance the Anglo-French Entente and the Anglo-Russian Entente, Britain did not have to fear any serious situation in Turkey, Persia, Afghanistan, India or China. But today none of these alliances exists, and on the other hand, a new spirit of independence in Asia is menacing British supremacy in that region. In an Anglo-American conflict, it is safe to conclude, that all Asian nations, especially China, Persia, Turkey, Afghanistan even India will show their active sympathy towards America against Britain, for the reason that America has never directly injured these nations, while every one of the Asian peoples has suffered from British imperialism.

Under these circumstances, British attitude towards American naval policy will be to show the spirit of utmost consideration. It has been pointed out by no less important personages than Lord Balfour, Earl Grey, Lord Phillimore and others that the British should hold to the programme necessary for the need of the Empire, but should not oppose any American naval programme. It has been suggested by Mr. Garvin, the editor of the *Observer* (London) that the only solution of the present difficulty is to convince America that she should support the British programme and build in parity with that of Great Britain. Earl Grey in his letter of August 10, 1927 to the *London Times* makes the most significant suggestion

as to the future policy of Great Britain towards the United States —

"The conclusion is that naval discussion between the two countries will prove neither wholesome nor profitable. It is impossible for any British Government to set its hand to an agreement binding us to naval inferiority; it is becoming difficult for the United States Government to bind its people to anything that is not naval superiority. This was illustrated at Geneva this summer, where the difficulty was perceptibly greater than it was a few years ago at Washington.

'Is it not possible to get back to the axiom on which the British Government tacitly acted before the war—that of not taking into account the American Navy in calculating the requirements of the British Empire? In accepting this as an axiom we were moved by two considerations. One was the belief that if we acted as if war between the United States and Britain was impossible it would, as very truth, become unthinkable on both sides of the Atlantic. The other consideration was of a lower order, but not less conclusive. It was that competition with the United States in ship building was a race in which the other competitors must certainly lose. If this was true before the War, it is just as true, and still more demonstrable, now.

'If in calculating the naval requirements of the British Empire we avowedly rule out all contingency of war with the United States there will be more economy in both the British and the American Fleets than will ever be obtained by literal binding naval agreements. I would add there would also be no sacrifice of real security."

The above policy can be accepted by the British Government as the safest course, if they feel that by doing so they would ultimately secure Anglo-American co-operation in World Politics and promote their common interests, or if they do not find any better alternative. In spite of the fact that Great Britain has lost her commercial, financial and industrial supremacy to the United States and many Britishers resent it, yet all far-sighted British statesmen will be willing to surrender to the United States Naval Policy with the express object of "swooping to conquer" in the long run. They would feel that, if by the so-called surrender to the American policy, Britain can virtually gain full support of America that will ultimately mean British

victory in World Politics, through a virtual Anglo-American co-operation.

At times, "a wish is father to the thought." Great Britain's enemies feel that will be wonderful opportunity for them if Britain and America become rivals in World politics and fight for supremacy. But British statesmen are too astute to allow any such fateful development which might lead to the destruction of the British Empire. In this connection, it must not be forgotten that there is not one important and responsible American statesman who ever thinks that America will be benefited by an Anglo-American rivalry and war.

The immediate consequence of the failure of the Anglo-American-Japanese Naval Con-

ference would result in America's adopting a progressive building programme which would make American navy "second to none." It will strengthen French and Italian contention for stronger navies, suited to meet their national needs. But there is no substantial reason for an immediate Anglo-American Naval Rivalry. In 1931, the question of limitation of navies of the signatory powers of the Washington Conference—America, Great Britain, Japan, France and Italy—will be reopened, and then it will be possible to determine whether the failure of the Three Power Naval Conference in Geneva, resulted in Anglo-American rivalry or not.

Munich Aug 22, 1937

CONGRESSES AND DURBARS

By NAGENDRA NATH GUPTA

The Eighth Indian National Congress

THE Eighth Indian National Congress was held at Allahabad towards the end of December 1932, with W. C. Brownlee as President. This was the second time that he was called to this distinction since he had presided at the first Congress held at Bombay in 1885. Allahabad is only a day's journey from Lahore and the Punjab was fairly well-represented at the Congress. I left Lahore somewhat early with a margin of a few days on my hands and I thought I should best utilize this time by having a peep at Agra and the Taj Mahal. I stayed at the Dak Bungalows, and after looking at the Fort, the Pearl Mosque and the palace of Jodhabai, I spent the greater part of the day at the Taj gazing for long hours at that marvellous structure from different viewpoints. In the evening I saw Imamdoddollah. The next morning I drove to Sikandra where who should I meet but Dayaram Gidmal and Hussain Shoukram, both of whom I had met a few days earlier at Lahore. They insisted that I should join them at the house of Lala Baij Nath, then Subordinate Judge of Agra. Lala Baij Nath was fairly well known. He was a great friend of Malabari, a contributor to the *Indian Spectator* and a reformer

For some time he was Chief Justice of Ludore and had written one or two books. As we had to leave for Allahabad the same night I went over to Baij Nath's place in the afternoon. Dayaram had been nominated to the Statutory Civil Service and was also a Judge in the Bombay Presidency. We were all young men, more or less, Baij Nath some years senior to the rest of us. We were naturally bubbling over with animal spirits and were laughing and jesting. Baij Nath alone was grave and held aloof, and I remember the ponderous words in which he reproved Dayaram when the latter became exceedingly hilarious. "Your levity," said the judicial-minded Baij Naib, "is perilously bordering upon uproariousness." This polysyllabic admonition threw us into raptures of mirth. "Prodigious," we shouted, "here's the resurrection of the Dominie!" For hours afterwards and even in the railway train we plagued Baij Nath till all his gravity disappeared and he wished his words had remained unspoken. The next morning one of us greeted Baij Naib with, "We are bordering perilously close to Allahabad," and this sent us off into another fit of laughter at the expense of the unlucky Judge.

At Allahabad I went to a hotel where I met Gerd Prasad Sen of Patna and Raja Rampal Singh of Kalakankar, Oudh. Raja Rampal Singh was one of the most original characters I have seen. He had spent ten years in England, had an English wife and had stood as a candidate for election to the House of Commons. On his return to India he established an English and an Urdu newspaper, both of which he was supposed to edit. But neither the prolonged stay in England nor the English mode of living had produced the slightest effect upon his appearance and speech. He was a thickset, horsey man somewhat above the average height, with a plain large face strongly pitted with marks of smallpox. He wore his hair in the Hindustani fashion down to his neck and though he usually wore English clothes he sometimes appeared as a Talukdar, resplendent in cloth of gold. And his accent! It was as outrageous and incorrigible as his Rajput courage was undeniable and invincible. He was not the man to hide his light under a bushel and so audience and no platform ever cowed him. Once on the Congress platform he burst out 'Gentlemen, members of Council vote from which side wouldst thou?' He was himself a member of the United Provinces Legislative Council. But he was open handed and generous, and his heart was in the right place, and he was always given an indulgent and amused hearing.

The pandal of the Congress had been erected in the grounds of Lowther Castle and tents were pitched for the delegates. Part of Lowther Castle had been thrown open for the use of the Congress and there was a large drawing room in which a number of delegates spent some hours in the evening. I shifted from the hotel to the house of Charu Chandra Mitra which was occupied by a few delegates. It was at this Congress that I first met Gopal Krishna Gokhale and my recollection is that it was here that he first attracted public attention. Some months earlier Mr. Hume had addressed a public meeting at Poona and in the course of his speech had made a very appreciative reference to the *Irishman*. Gokhale mentioned this to me as soon as we met and we used to have long chats at the Lowther Castle. Gokhale was then a young man not known to fame. He was Professor of Mathematics in the Ferguson College under the vow of receiving

only a pittance as salary. He was the foremost helper of Ranade in public work and a painstaking and careful student of public affairs. Pherozeshah Mehta had also his eye upon him as a coming man. Gokhale made a most favourable impression by his speeches in the Congress. Mr. Hume praised them highly and I considered them far better than the flood of rhetoric by which we were usually deluged in the Congress. Meeting at Allahabad for the second time we recalled the stormy session of 1888 with the strong flavour of the many speeches we then heard and the tense temper of the Congress. The session of 1892 was a quiet and uneventful one. I remember a luminous address delivered by Ranade one evening in one of the pavilions and I told some friends near me that compared with so brilliant and informing an oration much that we heard in the Congress was mere twaddle. Ranade was not an orator but he spoke with perfect ease, and his speeches were as thoughtful as they were replete with information.

The evenings were fairly cold for visitors and delegates from the Bombay and Madras presidencies, though for the Punjabis the weather was quite mild. One day Lala Murahidhar of Ambala, who always assumed the role of court jester to the Congress, was so much oppressed by the heat that he fainted. He had made the mistake of continuing to wear the thick woollen clothes used in the severe Punjab winter. We had taken the precaution of putting away very thick clothes and using light warm suits. Ananda Charu of Madras made it a habit of going on a peripatetic expedition every night after dinner. He was not very rigorous in his orthodoxy, and with a thick overcoat and a cigar in his mouth he would stroll about the camp chatting pleasantly with everybody he met. He invited me to breakfast one morning in the Madras camp and he made me sit by his side without any protest from any one. Nothing of any particular note occurred in the Congress itself. In spite of the prevailing good humour and the frank cordiality of comradeship the shadow of a great sorrow rested on this session of the Congress. This was the sudden death of Pandit Ajudhianath, the fearless and stout hearted leader of Allahabad who was called away in the prime of life while completing the arrangements for the success of this meeting of the Congress. The

office of the Chairman of the Reception Committee was filled by the venerable Pandit Bishambharnath, a man of high character and scholarly attainments, but greatly advanced in life and without the dynamic energy and the galvanic personality of Pandit Ajudhianath.

THE NINTH NATIONAL CONGRESS

It was decided at Allahabad before the close of the session that the Punjab should invite the Congress the next year. The Congress had met eight times but the organisers had not yet thought of the Punjab for a change of venue. Of course the Punjab could not be compared with the three Presidencies in progress and public spirit, but it was certainly not much behind the United Provinces while it had shown splendid organisation and constructive energy in the Arya Samaj movement. Sardar Dayal Singh could not attend the Congress of 1892, though he was present at the Allahabad Congress of 1888, but it was well-known that he would loyally support any decision arrived at by the Punjab delegates. After some consultation among the Punjab delegates the Congress was formally invited to Lahore for the ninth session. Raja Rampal Singh gallantly and patriotically volunteered to tour in the Punjab to rouse enthusiasm in the cause of the Congress. Pandit Madan Mohan Malaviya, a popular orator of the Congress undertook to accompany him.

For political purposes the situation at that time in the Punjab was like this: the only political organisation was the Indian Association, called after the body of that name established by Surendranath Banerjee in Calcutta. The membership of the Lahore Indian Association was fairly representative but not considerable. It filled the usual part then undertaken by public bodies of making representations mildly criticising official measures, organising occasional meetings, and so on. The largest and strongest organisation in the Punjab was the Arya Samaj movement but its activities were mainly confined to educational and social matters. The Mahomedans left the Congress either severely alone or condemned it as a movement hostile to Government. To belittle the Congress the Anglo-Indian Press dubbed it the Hindu Congress. It was obvious that the attitude of the Arya Samaj would determine the success or failure of the Congress in the Punjab.

The uncertainty on this point was very soon dissipated. The leaders and members of the Arya Samaj readily joined the Reception Committee and the replies received from the various parts of the Province were most encouraging. Sardar Dyal Singh was unanimously elected Chairman of the Reception Committee. There were several vice-presidents and Balshi Jaishi Ram pleader, Chief Court was appointed. Honorary Secretary Work began early and subscriptions were promptly promised and paid. I was in constant correspondence with Mr. Hume who was then in England, and many leading Congressmen all over India. Public lectures were organised and delivered in different parts of the Province. I delivered a lecture on the Congress and also addressed the volunteers. Both these were printed and circulated. In fulfilment of their promise Raja Rampal Singh and Pandit Madan Mohan Malaviya visited several places in the Punjab and addressed public meetings. At Lahore I met Raja Rampal Singh at dinner and social gatherings. Pandit Madan Mohan Malaviya stayed in a house close to mine and spent much of his time with me. The response throughout the Punjab left no doubt as regards the success of the approaching Congress.

The choice of the President of the Congress rested with the Reception Committee. We put our heads together and it was decided to invite Dadabhai Naoroji to preside. He had been the President in 1886 when the Congress was held in Calcutta. He was now a member of Parliament and had achieved considerable distinction by carrying in the House of Commons a resolution affirming the desirability of holding simultaneous examinations in India and England for the Indian Civil Service. Nothing came out of the resolution at the time. It was ridiculed as a motion earned at a snatch division, it was contended that the resolution did not carry with it any mandatory obligation, and the Government of India issued some ponderous tones of official and unofficial opinion to prove that the introduction of such an innovation would be in the highest degree impolitic. If the recommendation had been carried out at the time the action of the Government would have been widely appreciated, whereas the belated introduction of simultaneous examinations, when they were given effect to a few years ago, passed utterly unnoticed, the country having taken long strides since 1893. This has ever been the wisdom of the

Government of India and the British Government in respect of India. Every half-hearted measure of reform has borne the fatal label, "Too late!" The Government has not even learned to copy from the copy books the maxim, *Bis dat qui cito dat*. Dadabhai Naoroji agreed to come out to India for the Congress and wrote that he would arrange to pair with a member on the other side of the House. It was the Irish Home Rule Ministry of Mr Gladstone with barely a working majority in the House of Commons and not a single vote on the Government side could be easily spared. Dadabhai had to satisfy his party that a Unionist member would stay away from the House as long as himself so that the voting balance of both parties would remain unaffected. A plot of land was secured near the Lahore railway station for the pandal and just behind it there was a small hotel which was leased for the President, Mr Hume the General secretary, and a few others who might choose to stay there. The Reception Committee met constantly and all details were carefully carried out so that there was no need to rush things. The idea of putting the delegates under canvas as had been done at Allahabad and elsewhere was not to be thought of not only on account of the severity of the Punjab winter, but the winter rains known as the Christmas rains and essential for wheat, the staple of the Province. The rain actually came down on the day following the Congress when the Social Conference was held in the pandal. Sardar Dyal Singh had built a number of houses in Lahore, and all those that were unoccupied were placed at the disposal of the Reception Committee. Other houses were lent by other citizens so that the house problem for the delegates was easily solved. Visitors of course stayed either at hotels or with friends. We had a large number of tickets printed for visitors and all these were sold out. Knowing of the carelessness of our countrymen I wrote a number of letters as the time grew near, particularly to people in the Madras and Bombay Presidencies to have heavy warm clothing made for the journey and the stay in Lahore. I also went round some of the large shops in Anarkali, Bazar advising the shopkeepers to keep in stock thick ulsters, overcoats and woollen underwear as there would very likely be a brisk demand for them. As things turned out this proved to be a wise provision for in spite of all warnings conveyed by letters,

circulars, and newspaper paragraphs delegates from outlying districts of the Madras Presidency arrived with insufficient and thin clothing, and the ready-made clothes in the shops in Lahore were snapped up in no time. There were two cases of pneumonia, the delegates were removed to the Lahore Medical College Hospital and were saved only by the unremitting care and devotion of the students and the constant attention of the physicians. G. Subramania Iyer of the *Hindu* complained bitterly of the cold, but Tilak and Gokhale stood the cold very well and often came to the *Tribune* office to look up newspaper files for the preparation of their speeches. Kanade, who had succeeded Telang as a Judge of the Bombay High Court, was perfectly unconcerned and occupied a small, bare room on the first floor of a house at the northern end of Anarkali Bazar. Tilak, Gokhale and others from the Deccan were in the same house. When, on my round of the delegates' quarters I made enquiries Kanade said he was quite comfortable and did not mind the cold.

Mr Hume came out from England a few days before the Congress and was given a great reception. He was taken in procession through a part of the town and Anarkali, the horses were unyoked and the carriage was drawn by enthusiastic volunteers. Mr Hume protested but had to give way to the entreaties of the young men. The pandal was approaching completion and as Mr Hume was living quite close he spent a great deal of time in supervising the arrangements. One day some carpets, which lay folded in one corner, had to be spread out on the dais. There were no volunteers present just at that time and the coolies were killing time somewhere. The only men present were some influential members of the Reception Committee. Some one offered to go out and look for the coolies. In that impulsive way of his Mr Hume cried out "I don't mind working as a cooly for the Congress and the nation." And he at once went and laid fold of a carpet. The restraint and dignity of respectability vanished like magic, and the lawyers, wealthy raisers and others eagerly and almost shamefacedly set about helping Mr Hume. It was good to see them doing an hour's honest manual work and the words of Mr Hume sank deep into my mind.

Dadabhai Naoroji was accompanied by Dusha Edulji Wacha from Bombay, and was

enthusiastically acclaimed all along the route. We tried to bring him to a special train from Amritsar and had telegraphed to him to halt there for that purpose. We had not, however, consulted with the railway authorities. The old Sind, Punjab and Delhi Railway and the Indus Valley State Railway had been amalgamated into the North Western Railway, the old custodian and accommodating officials of the Company had been replaced by pigheaded and snobbish Royal Engineers, whose only conception of duty and their own importance was to make themselves as disagreeable as possible. They made petty difficulties about the timing of the special train and said that only a small number of ticket holders would be allowed on the railway platform when the President-elect arrived. This was a deliberate innovation since there were no platform tickets in those days. We broke off negotiations with the railway bosses, sent some people down to Amritsar to convey Dadabhai Naoroji to Lahore by an ordinary local train and refused to apply for any permits or passes for the railway station platform. The consequence was that when the train conveying Dadabhai steamed in there was a surging mass of humanity on the station platform, and the station staff and the railway police wisely declined to interfere. Dadabhai Naoroji received an unforgettable welcome in Lahore. There was a dense cheering crowd all along the route. It became dark by the time the slow moving long crowd debouched into Anarkali Bazar and it was a torchlight procession that passed through it. All the open windows of the houses near Lahori Gate were occupied by Parsi and other Indian ladies waving handkerchiefs and throwing flowers and bouquets into the carriage of Dadabhai, who stood up and bowed and saluted with both hands. The first words that he spoke to me when we shook hands on arrival at the house where he was to stay were, "This crowd is all!"

The session itself was an unparalleled success. There was a threatened rupture when a Mahomedan delegate persuaded Dadabhai Naoroji and Hume, without the knowledge of the Subjects Committee to accept some resolutions granting special concessions to Mahomedans, but peace was restored by the withdrawal of the resolutions. Mr Hume fumed and fretted, lost his temper and became ill. Sardar Dyal Singh had an attack of gout and though he

would not stay away from the Congress he could not read his speech or call on the President. Dadabhai Naoroji asked me to take him to the house of the Sardar and we drove there together. Sir Deonis Fitzpatrick was Lieutenant-Governor of the Punjab at the time and he was one of the best Governors the Punjab ever had. Hume suggested that Dadabhai Naoroji should call upon the Lieutenant-Governor and a letter was sent off to the Private Secretary. In reply, Dadabhai Naoroji was invited to dinner at Government House and there was no conversation on political subjects. There was some stir on the Congress platform when the Maharaja of Kapurthala appeared as a visitor and sat by the President Sitondranath Banerji who was addressing the Congress, paused for a moment to call for three cheers for the Maharaja. The story got abroad that the Maharaja who was then a young man, had called on the Chief Secretary to the Punjab Government for permission to attend as a visitor. He was told that there was no objection but the Congress was scarcely a gathering fit for Princes. Financially, this Congress was probably the most successful of all sessions. After meeting all expenses on a liberal scale paying the passage out and back of the President there was a balance left of over Rs 10,000 and this formed the nucleus of the fund out of which the Bradlaugh Hall was built.

LORD ELGIN'S DURBAR

Official Durbars are held all over the country and I have been present at several of them. It is not my intention to write much about these functions but I should like to record my impressions of the Durbar held by Lord Elgin at Lahore in 1891 because of an almost tragic incident which created some sensation. The Durbar was held in November in a large tent close to the Chiefs' College to the east of Lahore. Lord Elgin made a public entry into the city of Lahore with all the pomp and paraphernalia of a victorious commander entering a vanquished city. The roads were guarded by surging Gurkha and other troops. In the viceregal procession, besides the Viceroy's Bodyguard in its imposing scarlet uniform and mounted troops there were some pieces of artillery and several Indian Princes brought up the rear. At the Durbar there were present the Lieutenant-Governors of the Punjab, Lord Harris, the well known cricketer Governor of

Bombay, Sir Charles Crosthwaite, Lieutenant-Governor of the United Provinces and the members of the Viceroy's Executive Council prominent among whom were Sir James Westland, with his big head and Sir Anthony Macdonnell who afterwards became Lord Macdonnell Lord Eglon with his short, stout figure and homely features did not look like a very august personage at all. The Princes were headed by Maharaja Pratap Singh of Kashmir, who looked very uncomfortable and scarcely martial in a Colonel's uniform with his five feet and very few odd inches of height and the familiar huge white turban on his head. There were the Maharaja of Patiala (the father of the present Prince) the Nawab of Bahawalpur, the Raja of Jhind, Raja Hira Singh of Nabha (the father of the deposed Maharaja) the Raja of Kapurthala (these three were made Maharajas later on) and several others. The incident I have mentioned took place while

the Raja of Faridkot was returning to his seat after presenting the customary *nazar* to the Viceroy. The Raja was a feeble, decrepit old man almost bent double by age and illness. To reach the viceregal dais there was a sloping plank covered with red cloth. After the presentation of *nazar* every one had to back three steps with his face to the Viceroy and then walk back to his seat. As the Raja of Faridkot was backing from the presence he stumbled and would have fallen heavily but for the presence of mind of one of the secretaries who was standing below the platform and who caught the Raja before he fell and conducted him to his seat. It was cruel and scandalous to have compelled this man to attend the Darbar. His presence could have been easily excused on the ground of ill health and physical unfitness without any loss of prestige to the Government and certainly without any suspicion of disrespect to the Viceroy.

EDUCATION IN JAPAN

By D C GUPTA

IT may be said that the education of the present day Japan has nothing to do with that which existed before 1868 or in pre-Restoration days. The truth is that both in spirit and from the education of the present day is entirely different from that of pre-Restoration days. Of existing schools which number about 15,000 there remain only one the Keio Gijuku which was established before the Restoration of the Imperial Regime and all other schools were established after the Restoration. This means that in Japan there is practically no schools which has a history of over 60 years.

Put more plainly, the education of the present was modelled on the education of Europe and America. Of course, education was modelled entirely upon that of any one particular Western country. In the earliest days, the educational system of Holland was investigated and then the educational systems of France, America, England and Germany.

And from all these Western systems good points have been adopted. Even at present researches and studies are being constantly and zealously made into the educational systems and teaching methods of Western countries and if anything that may benefit our schools is found educational authorities hasten to adopt it. In this way within half a century education in Japan has made great progress.

In the various branches of science, education has made the greatest progress, although the fact is not much noticed on account of their being less showy than other branches of study.

Wonderful Progress

What is the reason that education in Japan which was started only half a century ago has made such wonderful progress? In the preceding chapter I have mentioned the fact that the education of present-day Japan is quite unrelated to that which existed in former days. But if one thinks that the

Art In Japan

The appearance of the prefectural Gallery of Tokyo near the Imperial Museum Ueno Park opened on May 1st by way of commemorating the life of Shotoku Taishi (674-699 A.D.) one of the early founders of Japanese fine arts is one of the

Seal Don 13 Kikuchi Haketsu

Conqueror of Waters by Asakura Fumio
membre de l'Academie des Beaux arts

greatest events to be recorded in the sixty years annals of modern Japanese fine arts.

Two exhibitions were simultaneously held respectively by the Japan Art Society and the Society of the Second Section both leaders in the art world.

Mr Seiko Takeuchi is an unrivalled master of the Kyoto school and one of the veteran members of the Imperial Academy of Art.

In recent years however he has been very active in the guidance of younger painters. The landscape of Southern China at the Imperial Academy of Art annual exhibition silently bespeak the vigour of this aged master who is now always to the front.

interesting things--for instance, daily changes in the tree's diameter. In fact, with most trees, there occurs every day, independently of their growth, a swelling and shrinking. The ascent of the sap in the vessels of the wood, produced by the transpiration of the leaves is so powerful that the trunks of most trees contract between morning and evening and then begin to swell again until early morning when they regain their normal size again.

A STORY NINE YEARS LONG

This pine has been writing its record, as seen here, since 1918.

"The daily alterations in size may vary from 1-1250 to 1-200 of the tree's diameter; they are inverse to the changes due to temperature, for the tree contracts when it is warm, by losing its moisture, and dilates when it is cold and wet. Mr. McDougal has studied especially the California red pine and the Monterey pine. A dendrograph has been in place since 1918 on one of these latter and inscribes regularly its curve of growth."

—La Nature (Paris)

old clothes internally as well as externally. Just look at the young women in the street; most of them are accompanied by "boys," a thing rarely seen a decade ago. The only pairs seen in the street then were old couples, who wanted each other's assistance in venturing in the busy traffic or brothers and sisters who were accompanied by their parents. At that time the Japanese boys and girls felt a kind of envy and even jealousy at the sight of Western couples who were seen walking in the streets.

Looking at the attire of the women of the new age one cannot fail to perceive something "saucy" about it. Their gait sets them off distinctly from the softer sex of old Japan. Their feet with felt *sori* on gently touch the ground from the tiptoe. Their short legs, which are counted among their drawbacks are skilfully camouflaged by Japanese clothes, or they are attired in smart western garments, with opera bags in hand, and their high-heeled shoes click on the hard pavement with a sound quite different from that of *geta*.

The two types of the Japanese modern girl striding along in front of the Osaka City Hall

It was about 1910 that the new women's emancipation movement began. It was at that time that business girls began to appear, but their number was quite insignificant. In 1923, the great earthquake wrought disastrous havoc in and near the city of Tokyo. The women, having survived

economic conditions and to collaborate with the consular service in every trade centre of the world

There are forty two foreign offices distributed all over the world and this foreign field force is in the closest touch with the Washington Bureau by letter cable and radio

Dr Klein's position is that in spite of the War there has been a growth of world demand for manufactured goods he says—

On the average in 1921 60 enquiries came to Bureau daily Now the daily average is 9000 They are mostly from small manufacturers Farmers co-operatives as well as manufacturers are showing increased interest in foreign trade We have not yet inquired about everything from planes to grasshoppers and from pencils to automobiles

Dr Klein states Out of the conflicts and uncertainties due to the war has come a great world scramble or business In the situation that obtains today nations seeking trade cannot go along

according to old precedents Since 1914 there has been a revolution in trade methods To be of service our representatives must understand the new conditions that have grown up since the war must know the changes in buying power must be familiar with new currencies with new regulations affecting commerce with new Tariffs and the like The number of bankruptcies that followed in the wake of the war was appalling The effect of these must be borne in mind in their relations to credit

Do we realise all this in India? One is afraid not Our commercial community is still wedded to old world methods our Government is supreme probably deliberately indifferent

We may not blame the Government, but will our commercial community realise that if we wait and sleep till Swaraj comes—when it comes we shall find ourselves displaced from everywhere

POPULAR PEACE MOVEMENTS OF THE WORLD A BRIEF SURVEY

By SATISA C GUHA

Secretary Santi Sangha Darbhanga

MEN are sick of war and strife. Although there are Governments still that wage war on a slight pretext the people in general in almost all countries desire to avoid all sorts of war for they know that war does them harm in any case either in victory or in defeat And even the Governments of most countries seem to have seriously taken in hand the question of how to amicably settle international disputes at the least possible cost, i.e. without loss of men and materials to any large extent. And hence the attempt at an establishment in Europe of a body of international representatives known as the League of Nations with its headquarters at Geneva. It has its defects, no doubt but it is a new move or method with prospects of improvement.

It is a good sign of the times that we hear of some sort of peace societies being formed in almost every country nowadays. They are peoples societies, not governments. The non

co operators in our country as inspired by Mahatma Gandhi are one such popular body formed on a huge scale. And although they have political aims too their politics so far as *orthodox* non co operators acknowledging the *sattva* (popularly known today as Gandhian) principles and acting upon them—are concerned is not restricted to any form of narrow nationalism. Besides this huge body of non co operators there are also smaller peace groups and religious bodies in the country that seek to promote human fellow feeling by their endeavours in the field of *thought* in the main and that of *action* as well, where possible. But no definite statistics are as yet available.

There is not a single country in the world today that has not within its boundary at least one group of persons striving for universal peace. If we go a little back to find how the desire for human fellow feeling and consequent universal peace and brother

sympathy with other countries in place of the narrow patriotism which too often prevails. When occasion arises one or another organisation also approaches the Government as for example just now a petition is being presented to the British Government by the British Section of the War Resistance International in favour of disarmament, suggested by the efforts being made by the League of Nations in that direction.

The League of Nations Unions in various countries are another organisation that calls for notice. They are quite independent of the League and in that sense may be called popular organisations. These Unions have been formed within the last five or six years. The membership of the British League of Nations Union on May 22 1925 is at a figure as big as 46,272 while in the first year (1919) it was only 3841. This is taken from that Union's monthly journal called "Headway" (June 1925). The purpose of these Unions is to spread as widely as possible the knowledge of what the League of Nations is doing which of course presupposes the study by the members of the Unions of the aims and work of the League. There is a considerable amount of literature already issued by the British League of Nations Union, besides its monthly organ.

In concluding this brief survey of the Peace Movements of the present day world it will not be out of place to record in short the general aim of Pacifism. Generally speaking there are two objects that are kept in view by all pacifists. One is remote and the other is comparatively immediate. The remote object is to remove the ultimate causes of war which is the same as removing the causes of discord and strife. This they know full well cannot be done quickly, for it depends on the growth and evolution of humanity and a change of heart from self-seeking and self-centredness to love and altruism to the recognition of the importance of the whole as above the individual and of the brotherhood and solidarity of humanity.

For the bringing about of this result, thought is the strongest force combined with the effort to purify our own hearts and lives from selfishness. Every individual who tries his best to think love and live love is helping to bring nearer the day when love will rule the world and war will become impossible, nay unthinkable. This is the true inner way of working for peace, and of course with this must be combined individual self-purification the effort to inspire others with the same ideal and especially to impress it on the minds of the young.

But the establishment of this perfect peace is not the same thing as the mere ending of war, though this latter is of course included in it. This lesser end can be achieved even while the causes of strife and discord still persist. Individuals need to try to settle their quarrels by fighting them out, but they found by experience that it was a ruinous method, and did not really settle them so nowadays though they still quarrel they resort to the courts and arbitration and more often than not disputes are really settled. Nations are beginning to do the same and it will become a universal custom when a sufficient number of people in all countries of the world are convinced of the futility of war, even apart from the question of its rightness or wrongness. The effort to bring this about is perhaps the most important side of the work of the Pacifists, just because success will be attained more quickly.

There are three principal ways in which this work can be done — (1) the education of public opinion by means of various kinds of propaganda (2) the attempt at various kinds of social reforms to remove the economic disabilities which are at the back of most modern warfare and (3) the effort by whatever means may present themselves to lead the governments and peoples of the world to recognise the advantages of arbitration over warfare, and also the added security that should result from disarmament.

ourselves, having by our educational policy called into existence a class of Indian intellectuals, cannot complain if we find that the intelligentsia thus created are dissatisfied with British control and anxious to do the governing themselves. This is interesting, we now learn that the "impatient politicians" are the intelligentsia. He admits that this aspiration is natural but he goes on to add that that does not make it practicable now, nor indeed in any near future. But why not? He seems to imply that the intelligentsia are a mushroom growth, a handful of agitators misled by western theories of freedom. Indeed, one would imagine from Sir Reginald's articles that there was no education in India before the British Raj. I wonder if Sir Reginald Craddock has ever read the evidence of Sir Thomas Munro given before a Committee of the House of Commons in the year 1813 (114 years ago), in which he said, from his experience in India

If a good system of agriculture unrivalled manufacturing skill capacity to produce whatever can contribute to either convenience or luxury, schools established in every village for teaching, a long sitting and arithmetic the general practice of hospitality and charity amongst each other and above all a treatment of the female sex full of confidence respect and delicacy, are among the signs which denote a civilised people then the Hindus are not inferior to the nations of Europe."

And he added that

"If civilisation is to become an article of trade between the two countries I am convinced that this country (England) will gain by the import cargo."

Sir Reginald tells us that, above all the warring races and jarring creeds of India, the consolidating influence of the Pax Britannica and the English language were superimposed. These English speaking Indians, he goes on to point out, number less than one per cent of the population. He adds further that, out of these, the fraction that has any grasp of or sympathy with the principles of democracy is infinitesimal. (One has not noticed specially in the past, that the Craddocks, O'Dwyers and Sydenhams are outstanding examples as apostles of democracy.) And then he points out that few people in England realise that the section to whom the British Government has been committing part of its authority is not one which would command the obedience of this huge population of India, were British control to be withdrawn. British control,

in his view, has decreed that the Indian pen shall start governing the Indian sword, and he gives it as his opinion that, if we depart, that sword will reassert itself and the pen will revert to its own groove. He warns the British electors that the more we surrender, the more intense will be the quarrels amongst Indians over the spoils.

It is rather interesting to find that Sir Reginald Craddock agrees with so many other die-hards in describing Dyarchy as a 'hybrid system' that cannot continue. His remedy would be a single Cabinet presided over by a Governor with its personnel half British and half Indian. The object to be aimed at, he thinks, is not responsible Government but a representative form of Government in which, as under the Morley-Minto Reforms, the members represent "not numbers but classes of interests." In other words, as Sir Tej Bahadur Sapru points out, what Sir Reginald Craddock advises is an irresponsible Executive, partly British and partly Indian, and a powerless Legislature no better than a debating society. Sir Tej Bahadur Sapru goes on to point out that Sir Reginald's views and sentiments, as expressed in his articles, are entirely contrary to his admission that the "goal before India of becoming a self-governing dominion of the Empire cannot be abandoned."

It is not surprising that, to counterbalance the views of Sir Tej Bahadur Sapru, the *Rolhermers Press* broadcasts at the same time the views of such friends of India as Lord Sydenham, Sir Michael O'Dwyer and Sir Frank Popham Young, formerly Commissioner of the Rawal-Pindi Division.

Sir Frank Young endorses Sir Reginald Craddock's opinion that the endurance of the 'British cement' will be welcome to the vast majority of the Indian people. Lord Sydenham "agrees absolutely" with the views of Sir Reginald Craddock, but dissents from the view that the Indian Legislative Assembly can be described as a 'dignified' body. He also is a strong believer in the 'British cement' idea and its endurance, he thinks, is not only welcome to the vast majority of Indians in British India but also to the Princes and Chiefs whose rights and powers enjoyed under the British Crown are now menaced by partly denationalised Indian politicians."

Sir Michael O'Dwyer expresses his view that it was quite quixotic to expect that

of the western world lay far less in the fact that a new faith had become prevalent, than in the fact that a new fundamental psychological attitude replaced that of the ancients. Whereas the ancients were self-contained, the Christians felt themselves rationally satisfied only when devoted to a higher being which existed outside themselves. Whereas the ancients appear before all things to be determined by the intellect with the Christians the emphasis was placed upon the soul. Conformably herewith a new hierarchy of values assumed control.

In the Renaissance and Reformation period may be found even among the great thinkers of the late Gothic age a new metamorphosis began in the psychical

Count Hermann Keeserling

organism of the western world. The accent of significance gravitated from the soul back to the intellect, a new masculine phase of history dawned in Europe. But as the transition was a gradual one only few people were aware of the meaning of the change. There occurred at the turn of this century something similar, it was as though slowly

heating water had reached the last degree before boiling point and was about to change its form and become steam. All at once the previous condition appeared out of date. Hence the destructive forces of the soul became dominant. The results visible far and wide were the Great War and the world revolution—not conjured up by maladroit statesmen and not in themselves unaverted events but happenings of cosmic, fatal significance.

Since those events people have been trying to get the world into order again by approaching the task from outside. This cannot be done because the outward chaos is merely a phenomenon produced by a crisis in the mind of humanity. As I have shown in my works 'Schöpferische Erkenntnis' and 'Die neuestenstehende Welt' the crux of the problem lies in the fact that the accent of significance has passed from the untransferable to the transferable in the soul of man so that all solutions hitherto valid have physiologically lost their validity. Hence a readjustment of all questions and problems and all solutions has become requisite. If the present chaos is to blossom into a new civilization this readjustment must be principally just as radical as that which took place when the Christian era superseded the antique. Nothing but such a readjustment can save humanity from continually lacerating itself.

We now come to a definition of the purpose of the School of Wisdom. Here we are concerned only in the very last place with the tiny actually existing intellectual centre at Darmstadt. It is in the first degree a question of the symbol and the radiator of this new adjustment of an adjustment which expressed in the terminology of the Christian myth is adapted to the age of the Holy Ghost in contradistinction to the Son. The School of Wisdom does not teach or aim at teaching anything new in content scientifically understood; it does something incomparatively more important inasmuch as it gives to the problems of life a new form adapted to the present age. As regards the fundamental problems it does so by means of the great congresses at Darmstadt. It does so on a small scale in every publication, in every lecture, may in every studental conversation. And that it really does thereby provide something of which humanity is in need seems to me to be proved by the fact

that it imparts its impulse everywhere in equal measure and with equal force

In Spain, in France, and Italy, and more recently, in Hungary, Rumania and Turkey, its doctrine found quite as full recognition as ever it has done in Germany. And so I hope, it will be in the United States, where I expect to stay from January to May in

1928. A readjustment of life is, in critical times the one thing needful everywhere, for readjustment means rejuvenation and, hence, new possibilities of life. Consequently, I have entitled my recently published third main work "Wiedergeburt" (Rebirth). From time to time, humanity must be reborn of the spirit, that it may continue to live

PROF. HEINRICH LUDERS OF THE BERLIN UNIVERSITY

By DURGAPRASANNA RAYCHAUDHURI

PROF Dr Heinrich Luders has been appointed a Reader by the University of Calcutta and invited to deliver a course of lectures on ancient Indian history and culture. He is expected here by the end of November and will stay in Calcutta for about six weeks. It may therefore interest some of the readers of the *Modern Review* to know just a little about this great scholar who will soon be with us.

Prof Luders, probably the most distinguished German Sanskritist of our day, was born in the German town of Lubeck on the Baltic Sea on the 25th of June, 1869. He went to the Grammar School of his native town and afterwards studied at the Universities of Goettingen and Munich. At Goettingen he was a pupil of Keilborn. In the year 1894, he took the degree of Doctor of Philosophy and from 1895 to 1898 he was the "Keeper and Librarian of the Indian Institute at Oxford. In 1898 he became a Privat-dozent at Goettingen, that is to say, acquired the right of giving academic lectures as an unsalaried professor. In 1903 he was appointed *Professor adjunct* of Sanskrit and comparative philology of Indo-Germanic languages to the University of Rostock, where he became *full Professor* two years later (1905). In 1908 he was transferred to the University of Kiel and the very next year he was called to Berlin as the successor of Richard Pischel, who had died in Madras in Christmas week 1908 during his Indian tour.

Prof Luders is a Member and the Permanent Secretary of the Prussian Academy of Sciences in Berlin (Preussische Akademie der Wissenschaften), and Corresponding

Member of the Royal Society of Sciences at Goettingen. His first important research work was the prize essay, entitled the *Vyasa Siksa*, specially with reference to its bearing upon *Taittiriya Prati shya*, which was accepted by the Philosophical Faculty of the University of Goettingen in 1895. Then appeared in 1901 *Ueber die Grantharezenen des Mahabharata*, 1907 *das Wuerfelspiel im alten Indien* (i.e., the game of dice in ancient India), in 1911 *Fragmente of Buddhist Dramas (Turfan finds)* and in 1926 *Fragmente of the Kulpanamanditika of Kumarajala (Turfan finds)*. Prof Luders is Co-editor of the *Grundriss der Indo arischen Philologie und Altertumskunde*. Very important also are his epigraphical publications which are to be found partly in the fourth and the succeeding volumes of the *Epigraphia Indica* and partly in the reports of the proceedings of the Prussian Academy of Sciences. During the years 1913-14 Prof Luders examined the Asoka edicts with great minuteness and penetration and obtained very useful results. He has also made important contributions to the study of ancient Indian literature. The reports of the proceedings of the Prussian Academy of Sciences also contain two articles by Prof. Luders on the *Chhandogya Upanisad*. And we expect that his great work on *Varuna*, treating of the Vedic mythology will come out shortly.

In 1898-99 he translated Max Muller's "Contributions to the Science of Mythology" from English into German.

Prof Luders is a past master in the interpretation of difficult Sanskrit texts. Scholars have recognised even before him

that the language of the important Buddhist writings was originally neither Pali nor Sanskrit but a certain Magadhi dialect. But Prof. Luders was probably the first to make a practical application of this theory by employing Magadhi forms in order to clear the texts of many a difficult passage in Buddhist writings of old.

Prof. Luders is also mainly responsible for the deciphering and utilization of the famous Turfan finds as regards their bearing upon Indology.

His wife Dr. Else Luders executes herself the difficult task of putting together the fragments—often very small—of the Brahmi MSS. discovered in Central Asia. In 1921 she published in collaboration with her husband

a translation of Buddhist *Fairy Tales* of ancient India. In it the translation of the Pali prose-texts was done by Mrs. Luders, while the Gathas and the annotations were rendered by her husband. In 1921 the University of Rostock conferred on Mrs. Luders the honorary degree of Doctor (*Dr. h. c.*, *ca. honoris causa*) in recognition of her services to the cause of literature.

The writer of these lines had the privilege of sitting at the feet of Prof. Luders for a couple of terms at the University of Berlin. He had also the honour of partaking of his genial hospitality on more than one occasion in his home. And it is a fact that Indian students in Berlin always find in Prof. Luders a sure guide, philosopher and friend.

THE LEGALITY OF COMMUNAL DISTRIBUTION OF SERVICES

By ASHOKE CHATTERJEE

"Britain's Solemn Pledges"

SANCTIMONIOUS unscrupulousness is the dominant feature of imperialist psychology.

Whether it has always been so is not definitely known to us, but we have a suspicion that it has been there since the first emperor committed his first crime in the name of religion and civilisation. That being so, it is no doubt futile to demonstrate the insincerity, hypocrisy or inconsistency of imperialistic declarations. Yet we cannot say that it is entirely futile to show up lies for what they are, or that men are ever ready to accept things at their face value? Is it not, therefore, our duty to repeat ourselves over and over again in order to disillusion the last of the credulous victims of imperialism?

No one knows it better than ourselves that British declarations and promises are mostly hollow insincerities put in just to gain breathing time when adverse circumstances press heavily on Britishers—empty words flung about to divert the attention of people, while they refresh their weary muscles prior to continuing their work of exploitation anew. Knowing this as we do, it is necessary that we repeatedly told ourselves how far we could trust the

British so that we might not be taken in too often. If we cannot force them to be sincere in their words and dealings by our denunciations, we can at least thereby undermine to some extent their ability to do further mischief with the help of sweet words.

As in other fields, so also in the field of communal distribution of public services, the British rulers of India have shown a phenomenal lack of consistency and honest adherence to their own solemn pledges. It was the late Dadabhai Naoroji who first put Britain's Solemn Pledges within inverted commas in the Introduction to his memorable book *Poverty and Un-British Rule in India*. He did so in a different connection altogether, but we can here use his selections to explain and support our contention, which is that in distributing public services on a communal basis the Government of India are violating the Act of Parliament of 1833 (India) the Queen's Proclamation of 1858, Lord Lytton's declaration of Jan. 1, 1877, and various other Proclamations and Pledges. Let us quote here the lines selected by the Grand Old Man from Britain's Solemn Pledges and consider how far they justify or condemn the present policy of the Government.

Act of Parliament, 1833 (India) —

"That no Native of the said territories, nor any natural born subject of His Majesty resident therein, shall by reason only of his religion, place of birth, descent or any of them, be disabled from holding any place, office, or employment under the said Company."

(The Company's duties were transferred to the Crown in 1858)

The Queen's Proclamation of 1858 —

"We hold ourselves bound to the Natives of our Indian territories by the same obligations of duty which bind us to all our other subjects and these obligations, by the blessing of Almighty God we shall faithfully and conscientiously fulfil."

"And it is our further will that, so far as may be, our subjects of whatever race or creed be freely and impartially admitted to offices in our service the duties of which they may be qualified by their education, ability and integrity duly to discharge."

"When by the blessing of Providence internal tranquillity shall be restored, it is our earnest desire to stimulate and to administer Government for the benefit of all our subjects resident therein. In their prosperity will be our strength in their contentment our security and in their gratitude our best reward. And may the God of all power grant to us and to those in authority under us strength to carry out these our wishes for the good of our people."

Lord Lytton (the Viceroy), on the assumption by Queen Victoria of the title of Empress, 1st January 1877, at the Delhi Assemblage —

"But you the Natives of India, whatever your race and whatever your creed have a recognised claim to share largely with your English fellow-subjects, according to your capacity for the task, in the administration of the country you inhabit. This claim is founded in the highest justice. It has been repeatedly affirmed by British and Indian statesmen and by the legislation of the Government of India. It is recognised by the Government of India as binding on its honour and consistent with all the aims of its policy."

Lord Lytton (the Viceroy), as Chancellor of the Calcutta University, March, 1877 —

"The Proclamation of the Queen contains solemn Pledges, spontaneously given, and founded upon the highest justice."

Jubilee of 1887 The Queen Empress, in reply to the Jubilee Address of Congratulation of the Bombay Municipal Corporation —

"Attention is made to the Proclamation issued to the occasion of my assumption of the direct Government of India as a charter of the liberties of the princes and peoples of India. It has always been and will continue to be my earnest desire that the principles of that Proclamation should be unswervingly maintained."

We have italicised those words and passages

in the above quotations to which we want to draw the special attention of the reader. From the above we find that to the Government of India race, religion, caste, creed, place of birth or descent should have no importance at all in the selection of public servants and in the distribution of administrative power. Regarding the latter it may be pointed out here that the spirit in which allocation of franchise has been effected under the Government of India Act of 1919, is entirely opposed to the above-quoted 'Solemn Pledges.' It is capacity, education, integrity and such like individual and real qualifications that should have given a man his vote in India, not his religious faith or racial ancestry, as we find it actually in the present system. However, criticism of the Government of India Act of 1919 is not the aim of the present article, and we shall leave it at that.

That the present policy of the Government of India regarding appointments is communalistic is undoubtedly true. Let any think that the Government is adopting the communal principle merely as a temporary measure and not as their declared policy, let us point out that it is the declared policy of the Government of India to distribute the All-India and other services on communal basis. Let us study the following document for a while —

Copy of Home Department Office Memorandum No. 1-176/25 Ests., dated the 5th February 1926 to the Financial Adviser Military Finance.

Subject — Measures to be adopted for securing the appointment of members of minority communities in the Government of India Secretariat offices (Clerical Establishment)

The undersigned is directed to invite a reference to the Home Department Office Memorandum No. 1-176/25 Ests., dated the 15th July 1920, on the subject noted above.

2. The policy of the Government of India is to prevent the preponderance of any one class or community, and they have now decided that the method laid down for the purpose of attaining this end in the case of the All-India services namely the reservation of one-third of all permanent vacancies for the redress of communal inequalities should be adopted generally in recruitment of India Secretariat and the offices subordinate thereto. This procedure should be adopted in all future recruitment.

3. In order to give the instructions effect it will be necessary for each Department office to examine the communal composition of its clerical staff from time to time with a view to ascertaining whether any community is more adequately represented. In each office should specifically consider the case of every third vacancy which

or not such vacancy should having regard to the communal composition of the clerical staff of the office go to a member of a minority community. If the decision is in the affirmative candidate of such a community, if available and adequately qualified should be appointed to the vacancy, the claims of the various minority communities available for service being borne in mind. If the decision is in the negative the vacancy should go to the candidate with the best claim to it, having regard to all the circumstances of the case, and not necessarily to a member of the non-minority community. Such recruitment should of course be made through the prescribed channel where such has been laid down.

4 These orders refer to fresh recruitment only and not to Departmental promotions, which will continue to be regulated by merit.

5 It is requested that a copy of these orders may be communicated to attached and subordinate offices for information and guidance.

We have authoritative information from the Home Department, Government of India, that *some what similar instructions have been issued in regard to the All-India and Central Services generally*.

Let us next consider the following extract from the Legislative Assembly Minutes —

No 244

Legislative Assembly L. D. R. No 2040
Answered on the 24th August, 1927

(Reply by the Honble Mr J. C. C. to Mr Anwar-ul-Azim's question regarding the orders for appointment of members of minority communities in the Services)

General instructions on the subject have been issued by the Home Department. The principles laid down are applicable to the Government of India as a whole, and Departments do not ordinarily issue independent orders on the subject, but confine themselves to bringing the general orders where necessary, to the notice of subordinate authorities. I know of no case in which the orders have proved ineffectual.

Now the above clearly show that the Government of India do not now a days appoint people solely according to individual merit, but they are influenced largely by consideration of a man's religion or (in the case of Anglo-Indians) birth. This is no place to discuss the question whether or not this policy has been dictated by a desire to bring disruption into the growing nationalism of a united India, which is a menace to the British autocrats of India, we shall here judge only whether the British have any legal right to do what they are doing.

Indian state system. How then can we accommodate the present policy of the Government with these solemn pledges?

The Government's existing policy is that of all public services, some should be reserved for one community, some for another and so on, so that if after the quota assigned to one community has been filled up a highly qualified member of that community applies for a job, he will not get it and it will go to a less qualified man of some other community whose claim on services still remains unexhausted. What, may we ask, disaffects the more qualified man and deprives him of his job? *Evidently his religion or descent*. Does this not go against the Act of 1833 and the Queen's Proclamation? We believe it does.

The minority communities, who support the communal policy of the Government, do so, not on account of their minority in numbers, but because they are minors in education, ability, and general training. They look for a temporary advantage through political agitation (which is welcome to the British authorities), whereas the proper thing for them to do should have been organised effort at removing their own individual deficiencies. Just as a member of a minority community cannot become a good writer, an able scientist or a powerful athlete by pleading his religion or birth, similarly also he can not become an able officer in any department of Government through his professed faith in the Vedas, the Koran or the Bible, or through his having Portuguese, French, Dutch English or Bedouin blood in his veins. This communal criterion of excellence is one of the worst examples of the atavistic plunge back that "statesmanship" occasionally forces "statesmen" to indulge in in the hope of achieving some selfish purpose. In the present instance the Government of India are supplying a bone of contention, in the shape of this non-religious communalism, in order to substitute a religious bone of contention, which was fast disappearing towards the beginning of the century under the pressure of a rapidly growing nationalism in India. The result is that, at least temporarily, the one bone is creating a lot of trouble and the other is also recovering its solidity. But we are again digressing.

Our object in writing this article is to show that the communal principle in the distribution of jobs as adopted by the Government of

India IS ILLEGAL and efforts should be made to fight it legally and constitutionally. Whether or not the British are using this principle as a fruitful means of providing the people of India with too much occupation to find time to agitate against the British, the point is that they have no legal right to do so. If they desire communal disunity in India they must be more clever to gain

their objective. They must not thus openly go against India's "constitution" and 'Charter of Liberties,' the 'Solemn Pledges' of their own ancestors. Will not some one, some one preferably who has lost a job or failed to get one in spite of possessing superior qualifications sue the Secretary of State as a Test Case?

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this *Renew* or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor *The Modern Review*.]

Proficiency of Bengali Moslem Students in Mathematics

In your last issue, p. 491, you write: "Miss Fazilat-un-nissa, a 'Tahomeisi' woman student, placed a first-class first in M. A. in mathematics. Miss Fazilat-un-nissa's achievement is a record for Bengali Moslem students as well as for Bengali women students of all sorts."

This is not correct. Mr. Abbas Sobhan Mahmud B. C. S. stood first in the first class in mixed mathematics in the M. Sc. examination and Mr. Mobar Rahman L. C. S. stood first in the first class in pure mathematics in the M. A. examination.

A READER.

Recent Hindi Literature

In the October issue of the *Modern Review* Mr. L. N. Misra has endeavoured to refute all the statements of my article entitled the *Recent Hindi Literature* (published in the August issue of the *Review*).

My article was not a "piece of critique" as Mr. Misra thinks it to be. It was a mere informative article. It was written simply to inform the public outside the Hindi-speaking world about the miserable condition of our recent literature. I do not say that the Hindi-reading public constitutes a nation of its own, but I do say that the spirit of provincialism (the twin brother of "nationalism" as I have repeatedly called it) rears its ugly head over the minds of some of our editors and literary critics. Only the other day the editor of one of the most popular Hindi weeklies and Mr. Ram Nath Lal, whom Mr. Misra has admired as one of

the greatest poets of the "New Era", expressed their feelings of suppressed indignation by asserting that the aged editor of the *Prabashi* and the *Modern Review* published my article simply because he was very narrow-minded and greatly prejudiced against the cause of the *lingua franca* of India, and unreasonably jealous of the progress our literature was making by fit and starts. If this outburst is out the product of the venomous spirit of provincialism, what is it?

In the course of my criticism upon *Premashram* I have written, this very work of fiction has made our men of letters realize for the first time the greatness of our literature. Mr. Misra finds fault with this statement of mine. What about Tulsi and Kabir? asks our venerable friend. One might have thought that he had sufficient brain to grasp from the very title of my article the fact that I was speaking of the recent Hindi literature. Tulsi and Kabir require no Mr. Misra or anybody else to shed light upon their self-luminous and radioactive glory.

One wonders if Mr. Misra is defending Mr. Premchand or merely corroborating my views in regard to his "art." In one place he says that the true Art is quite independent of a problem whatsoever (which is the mere echo of my view expressed indirectly in my article), while immediately in the next paragraph he asserts that the solution of social and political problems is the ultimate end which the great artists have in view. One is at an utter loss to decide what to say about these contradictory arguments. I leave this decision for the reading public. One remark, however, cannot but explode. I never wrote in my that "a writer in the habit of touching a social and political problems eventually down from the rank of a superb artist."

really said or meant to say was that the *solution* of these problems is not the *ultimate end* which a true artist has in view and if a artist wants to solve any problem at all it is not the aphemeral problem of political and social triflings but the eternal problem of humanity of the sufferings of an individual (or personal, whatever you may like to call it) human soul. Art deals with the *reality* of the *personal* life and not with the impersonal theories of politics sociology and science. Great poets have no doubt brought problems for their works from political and social spheres. But they have brought them simply to give wider scope to their plots so that they might be able to express the sufferings of an individual human soul more beautifully and more clearly. They have always tried to show how the suffering human soul while conforming to every political and social conventionality has been striving to blend the rhythm of its every vibration with the harmonious music of the great Eternity. On the contrary in Mr Frenchand's novels the political and social problems are all in all. Take away these problems from them and the whole theory which the writer has tried to establish falls to the ground and the whole plot collapses like a house of cards. As if these problems constituted the basic factor in the evolution of the emotional energies of man. Thus Mr Frenchand's notion of Art is diametrically opposed to that of the great artists of the world.

Mr Misra's statement that Tolstoi failed in literature and succeeded in politics is so radically false preposterous and ridiculous that I dare not speak anything in this connection. Perhaps our respected friend is not aware of the fact that in the West Tolstoi the preacher has faded into insignificance before the dazzling glory of Tolstoi the true and great artist. As regards the misrepresentation of Gorki and Tagore Mr Misra successfully pretends not to be aware of any such writers in the Hindi world as have tried to present the art of these two master writers in a distorted form. Perhaps he will be so honourable as not to deny that he is aware of the literary criticisms of Mr Raghupati Sahai and Mr Janardan Jha. Both of these famous critics have asserted that Tagore and Gorki have preached politics behind the veil of their art. And this very Mr Raghupati Sahai it was who after comparing Premashram to a great many greatest classics of the world affirmed that this masterpiece of fiction was one of the brightest gems in the vast sea of the literature of the world.

As to the information of Mr Misra about the advent of a new era in the Hindi literature I am sincerely grateful to him. But all the same it is evident that he corroborated my statement respecting that art of Mr Maithili Saran Gupta and Mr Ayodhya Singh Upadhyaya, the respective authors of *Bharat Bharati* and *Priyaprasava*. In my opinion these two poets are still leading our literary public and I see distinct marks of the footprints of Messrs. Gupta, Upadhyaya and Frenchand in the writings of a great many of our young writers. However I do not deny the talents of Mr Iant and Mr Irasad. But I am perfectly convinced that the "new movement" has not proved a successful one as yet. For we see that so many of the advocates of this new movement have been trying hard to oppose one another. Why is it that each of our Frenchands, Tripathis

and Sumanas have been striving with unflagging vigour and straining every nerve to gain superiority over any other writer? Why are these master novelists and master poets engaged in furious but at the same time ridiculous literary cock fights? If this state of things is not disorder and chaos what in reality is it?

ILA CHANDRA JOSHI

Indians in Burma

In the October issue an Indian in Burma has drawn the attention of Indian leaders and publicists to the problem of Indians in Burma and has earned the gratitude of the Indian community in Burma. But it appears that the writer is one of those superficial critics who care little to take stock of actualities and whose carefully collected data are used to bolster up dead programmes while trying to give an idea of the Indian position and suggesting remedies for the community. He has gone out of his way to throw mud at the Congress workers of Burma among whom one can easily recount some of the most redoubtable champions of the Indian cause. He takes exception to their desire to form an Indo-Burmese *entente* and even goes to the extent of questioning the *honesty* of Congress leaders. He says that the separatist tendency is growing apace among the intelligentsia, certainly meaning the English-educated Burmans, and I am in full agreement with him having had enough opportunities of mixing with them in the University and outside. But the intelligentsia is a very small percentage of the population and their quarrel is with the 6 per cent. Indians following trade and the professions. It is a question of loaves and fishes of office and is similar to the cry of communal representation in the services made by the Mohammedans in India. Moreover the General Council of the Burmese Association, the Burmese Congress which claims the allegiance of a greater percentage of the Burmese population than the I N Congress does of the Indian people, is anti-separatist till the Burmans get Home-rule fighting along with their Indian comrades. They might ask for separation then in fact they shall have to in order to form a state. But that is no ground for saying that (1) the Burman is head over heels in malice and hatred to the *Aala* and (2) the Indians shall have to take a fighting attitude towards the Burmans in fact, the latter is an impossibility considering the vast amount of investment by Indians in Burma involved.

Burma and South Africa present dissimilar problems in many respects. The Burman and Indian bear close affinities of culture and tradition and it is because the Indian coming in the track of British conquerors have taken the position of exploiters and put on superior airs in fact, the very things which we detest among the European trades people in general in India, that he offers grounds for ill feeling amongst the Burmans. The Indians have done much in building up New Burma but to say as many Indians who want to fight the Burmans say that this had been done with a clearcut end of service to Burma in view and not in course of the exigencies of commerce is only repeating what Europeans often say to

us and I. That is not the politic attitude. What is required is, as your contributor has suggested, to organize and unite the Indian population in Burma, and also to stretch out the hand of fellowship to Burmans and say that we are trying to become good sons of the soil not to take the role of benevolent exploiters and talk of the Buddha and the consequent *guru* ship over Burma any more, but to become good citizens of Burma and not birds of passage. The Burman excluding the "intelligents" who exert little real influence on the people, does not hate the Indian; they are a hospitable people, they would gladly make room for Indians who talk Burmese, love the land of their adoption and not sneer at its people and put on a patronising air (which a fellow subject nation which has found its present foothold on the favours of the conquering race from across the seas has no right to put on) any more. That is what men like Rabindranath Tagore, Lala Lajpat Rai, Mr C F Andrews and I am not mistaken yourself advised the Indians in Burma to do. That is what Mr Andrews now asks the Indians to do in South Africa also though for reasons not alike.

Burma is a land where equality prevails as it does nowhere else on earth. Burmans cannot understand how a nation boasting of its ancient heritage and civilization can allow its labourers (amounting 94 per cent. of the Indian population) to live a life of wretchedness when the intelligentsia among the Indians in Burma adopt the European borrowed pinnies for all public appearance and at the same time talk big about their national glories and religious teachings. Indians in Burma need more of decency either they must stick to their position as birds of passage from a great land and prove their superiority like the British, or they must merge themselves among the Burmans with as much of their national heritage and culture as they can take there. It is on good taking, the role of benevolent angels from a hallowed land and prove by the callousness of the fortunate and the educated towards their labouring countrymen the falsity of their big professions. Let the Indians unite in love and pride of their culture, and if they find Burma a land which feeds them and welcomes them they should try to be useful to the country of their adoption. That is, I believe, the position of Congressmen in Burma, and for instance I might cite the case of Mr N C Banerji of the *Rangoon Mail*, who championed during his stay in Burma the cause of the Indians most successfully, earned the confidence of Burman nationalists, raised the Indian community in the eyes of Burmans by organising demonstrations during the visits of Tagore, Dr Barua, Mr C F Andrews and others and by urging on Indians not to be ashamed of their dress and languages made the Burmans feel that the Indians were not merely the coolies who had come to their land in their worst role in history as part and parcel of a foreign bureaucracy. He was a congressman and I believe many Indians think that such work by congress men is neither dishonest nor "their mishapen patriotism," and disingenuous propaganda have deluged them. Congressmen like him, instead of stifling the true and natural voice of the majority of Indians, the majority who were both dumb and indifferent and mostly ignorant, voiced their

opinion from the platform and through the press and thus tried valiantly to safeguard Indian interests working in unison wherever possible with Burmans. Mr S A S Tyabjee is a Congressman and his success in the recent Anti Ganga agitation is due to the co-operation of the sons of the soil. May I suggest that those who know little of the majority both dumb and indifferent personally except the phrase should cease bothering about them and let earnest and noble Congressmen Ramkrishna Mission workers and others who work for and amongst them work unhindered and with at least no uncalled for and groundless vilification in a country where ardent workers have to bear the cross unaided and with little hope of encouragement?

BENOTENDRA NATH BANERJEE

The Teaching of Anthropology in the Calcutta University

In connection with the letter published in the last issue of the *Modern Review* will you allow me to mention some additional facts regarding the teaching of Anthropology in the Calcutta University.

Mr Anathnath Chatterjee is peculiar in his behavior with the students. He does not allow them to handle the instruments nor any of the specimens that are in the Seminar. If any one say the bearer or Mr Tarak Chandra Roychoudhury his assistant is asked to give any the only answer that the students get is "সত্য সত্যই, দেবদত্ত।" The Doctor Babu, i.e. Mr Chatterjee, has prohibited it can't be given. Curiously enough these things are not generally shown in the class, whereas questions on these are asked in the examination. Thus the students are not allowed even to learn what little they can by themselves! Is not such examination a mere deceptive process? Mr Anathnath Chatterjee, according to the timetable, should take practical classes on Saturday. But so far as we are aware he has not turned up even for a single day in the Seminar not to speak of taking the class!

The university has bought a few specimens of human brains and these have been kept completely sealed up in the Seminar. No attempt has been made to demonstrate them to the students. Questions regarding the comparative position of the Neanderthal Brain and such others are set in the examination—but no attempt is made to show the students what a normal human brain is like—not to speak of the cast of the Neanderthal Brain or any of the Seminar Brains.

This year while some of the 5th year students were attending his class and could not at all follow what he dictated they asked him "We cannot follow you, Sir." He answered "You won't be able to follow them you simply copy the notes, that will do. Will not the University authorities take note of this?"

A large number of anthropometrical instruments have been bought by the university. But curiously enough Mr Anathnath Chatterjee and Mr Tarakchandra Roy Choudhury who are in charge

of the practical classes have not the foggiest notion as to how to handle these instruments and they have been preserved in the case with the order not to be taken out and are never shown to

the students. And we should not be surprised if some students were actually placed in the M. A. and M. Sc. examinations for not knowing how to use them.

PATH TO COMMUNAL PEACE

By M. DHAR

THE Simla unity conference met and dissolved as had been anticipated by many, after coming to the conclusion that as matters stand Hindus and Mahomedans cannot agree on questions of 'cow killing' and 'music before mosques'. To the credit of the conference now stands the tragic fact that what was before the conference a mere difference in the views of individuals has now become a sharp cleavage between the two communities concerned—what was scattered and personal has now become collective, organized and "racial". Knowing fully well that all the passions and prejudices centring round the sacred cow and the sacred mosque are political in their origin and manipulation, it was an impossible task the conference set before itself attempting to cure symptoms without tackling the malady. There is, however, no question about the good, honourable and patriotic intention of those who called the conference into being and who took part in its deliberations. And if out of good has come evil let us hope, out of this evil will come yet greater good. Indeed the phenomenal outbursts of the communal tension have been so appalling that they have eclipsed the real cause behind the scenes and fighting is going on as if for fighting's sake. This real cause is the hope of "Race" Domination. It is a "Race" Warfare in which Hindus and Mahomedans are engaged for "race" supremacy "race" sovereignty in India, so that, even if a binding agreement on questions of "cow killing" and "music before mosques" could be reached, whether with or without the intervention of Lord Irwin this fighting will still go on, possibly on some other pretext, and will not end until both sides give it up in a common conviction of its utter futility and absurdity.

There is a large volume of opinion, pre-

dominantly Hindu in favour of abolition of communal electorates stressing the point that this abolition will restore communal harmony. But against this view it is pointed out that communal representation and communal electorates had been the practice since 1909 without any overt disturbance to communal equilibrium. True, yet, these widespread communal riots have followed so close in the heels of the reforms, that it is impossible to dissociate the two. And should we scrutinise the Reforms for their share of responsibility for these deplorable communal upheavals we should find it in the very heart of the Reforms, in the very promise of responsible Government contained in it.

If in a subject country, say, of two 'races', the 'races' are left to develop independently of each other into a free nation, small wonder if they start developing antagonistically to each other. This is what is taking place in India to-day. It is this hope of "political freedom" held out by the Reforms, under conditions of separate communal electorates which has awakened race antagonisms tearing the country from end to end.

Separate electorates before the Reforms held no promise of political independence, and consequently raised no race ambitions and led to no 'race' antagonisms. But by their promise of responsible Government, which has been understood to mean promise of political sovereignty, the Reforms have invested these communal electorates with a 'race' meaning with all the rest into the bargain. Of course, the authors of the Reforms did not foresee that their generous offer was ever likely to take such a turn, but the fact that communal representations and communal electorates are incompatible with any progress towards responsible Government was fully admitted by them.

Whatever the reasons of state, revealed and unrevealed, which must have compelled the institution of communal electorates in the Reforms, so much against the reasonings of their authors, now the plain position is that either the Reforms must go or the communal electorates must be scrapped if we want to "lay the spectre that besets the path." For both cannot co exist and the cause of Hindu Moslem unity which has rightly come to be regarded as identical with the cause of Indian nationalism, will gain a thousand fold, should even both go. In any case from the point of view of Indian nationalism nothing can be worse than this Hindu Moslem strife.

Should the rulers of India's political destiny decide to stand by the Reforms by substituting separate joint electorate, this decision would not only mean a great forward step in the direction of responsible government, but what is of far greater importance in the present crisis than anything else this will pave the way to communal peace by giving a wide berth to the spectre of race domination. The opposition bitterness

'strain on Mahomedan loyalty', the main professed grounds for maintenance of separate electorates, have lost their former significance now and the Indian Mahomedan of to day is no more the Mahomedan of 1918 than modern Turkey, etc., is its former self. In fact, there are Mahomedan leaders who are gradually losing faith in separate electorates as they are realising by experience that these communal electorates are really doing great harm to their community by keeping it in isolation with a communal outlook and thus fostering a morbid spirit of self complacency.

But before the curtain finally drops on this tragic scene of race antagonisms in India, there must take place "a change of heart both in the rank and file of Britishers and in the rank and file of our countrymen. And that change of heart is easily effected in us if we concentrate on these two outstanding and obvious facts

- (1) India is our own common country
- (2) United we all advance, divided, we all go under

PROVINCIAL CONTRIBUTIONS

C V HANUMANTHA RAO B A.

QUITE after the introduction of the Constitutional Reforms of 1919, the question of Provincial Contributions has become a standing one raising its head annually at the time of the presentation of the Budget and providing a copious ground for the play of interprovincial wranglings. Before the reforms, there were no Provincial Contributions as the provinces had no independent sources of revenue for themselves and had to depend for all their financial requirements upon the doles distributed by the Central Government, which had in its own hands all the means of raising and spending the revenues of India. Under those circumstances, the provinces had no financial independence and no facilities for taking the initiative in any scheme of national amelioration and development, though, at the same time it was also true that there was not

any absolute need for financial adjustment between the provinces and the Central Government as all Provincial affairs were classed reserved and Provincial Governments were entirely under the control of the Government of India in administrative affairs as well.

With the inauguration of the Montagu Chelmsford reforms and with the division that was made between Central and Provincial Subjects, and especially as a result of the introduction of the Dyarchical principle of Reserved and Transferred Subjects in the provinces, it became imperatively necessary that a separation should be effected between the central and provincial sources of revenue so as to enable the Provincial legislatures and the Ministers, who were given the charge of the Transferred departments to possess independent means to effect an

improvements and carry out any schemes calculated to increase the good of the people. As such in their report on constitutional Reforms, Mr. Montagu and Lord Chelmsford clearly enunciated the principle of decentralization of Indian finances and their distribution of the Central and Provincial Governments on certain fixed principles and the allocation to the Provinces of the revenues from Land Tax, irrigation tax, Excise and duty on stamps and to the Central Government of the proceeds from Income Tax, customs, salt and opium dues and Railway receipts. Since as a result of this redistribution of revenues, it was thought that there would be a deficit in the revenues of the Central Government, the authors of the joint report suggested the covering of that deficit by a system of contributions by provinces from their newly acquired sources of revenue. It was estimated that the deficit of the Government of India would be about Rs 14 crores and it was recommended that the amount should be distributed over the different provinces who should pay to the tune of not more than 87 per cent of their increased revenues in order to make good that expected deficit. At the same time, it was also proposed to give to the provinces the powers of independent taxation and of borrowing money on the strength of their own resources.

Intense discontent prevailed in the provinces against the arrangement prescribed in the Montagu Chelmsford report, and the Secretary of State for India appointed, on the advice of the Joint Select Committee of Parliament, a Committee under the Chairmanship of Lord Meston to investigate into the whole question of Provincial Contributions and other allied questions and to make suitable recommendations. During the time the Committee was conducting its investigations, the Government of India's deficit was found to have gone down to Rs 6 crores owing to certain reductions in expenditure and other economies, but the Meston Committee transferred the receipts from General Stamps to the Provinces and thus showed the Imperial deficit to amount to Rs. 10 crores, which they sought to distribute over the provinces. The Committee was led to remark that the question of adjusting the provincial contributions is a very difficult one and that the policy of the Government of India should be so directed as to enable them to reduce as early as possible and to

abolish altogether in the near future the system of the Provincial Governments' Contribution to the Central revenues. The problem of making good the deficit in the revenues of the Government of India was so imperative and urgent, that the Committee could not bring themselves to consider the grievances put forward by the different provinces and finally adopted the principle that the contributions should be paid from the additional spending power acquired by the provinces after the recent financial readjustment between themselves and the Central Government. The Committee fixed the initial contributions which in seven years' time should become 'standard' contributions.

The main features of the Meston Settlement are first that agricultural provinces like Madras, the Punjab and U P, which are supposed to receive much advantage owing to the provincialisation of Land Revenue, are made to pay the biggest contribution, Madras paying Rs 318 Lakhs, the Punjab Rs 175 Lakhs and the United Provinces Rs. 240 Lakhs out of an estimated additional spending power of Rs 576 Lakhs, Rs 259 Lakhs and Rs 397 Lakhs respectively. Secondly, the additional spending power was estimated too liberally and in reality it never came at all, almost all the provinces having to run their administration on the basis of deficit budgets during the first few years of the settlement. Thirdly, Bombay, a largely industrial province had to forego its receipts from income tax, an admittedly primary source of income for that province and found itself in a very bad financial position. The result of the settlement was, of course increased discontent and dissatisfaction among the provinces and complaints poured forth to the Government of India urging a revision of the Meston award and demanding a more equitable distribution of burdens. Inter provincial jealousies sprang up, each province urging its own claims for exemption from payment of the contribution, Madras, for instance, saying that with a revenue and expenditure equal to that of any other province, if not more, she was made to pay the largest contribution and Bombay demanding the provincialisation of Income-Tax, a central head of revenue, if it was to balance its budgets.

The Financial Relations Committee, which went into the whole question again at the time of the consideration of the Government

of India Act, reported that it must be a definite principle that no province should start on its career of financial independence with a deficit budget likely to necessitate the imposition of additional taxation and that according to that principle those provinces which have most largely benefited by the readjustment like Madras, should be made to pay the biggest quotas. The provincial contributions thus became an irrevocable first charge on provincial revenues which they had to pay irrespective of their financial position which as said above was not altogether favourable. Ever since the contributions were decided upon there was the annual protest by the Provinces against the impost, which has been characterized as 'iniquitous' but every year for the last four years the Government of India's budgets were deficit budgets and it could not see its way to concede even an iota of the demands made for remission of contributions by provinces. The Legislative Assembly was the place where annual battles were fought over this question between provincial representatives and the representatives of the Government of India. At last in 1924 Sir Basil Blackett, the Finance Member was able to organise the central finances on a strong footing and to present a budget which showed a surplus of Rs 336 lakhs. This surplus was sought to be devoted to a remission in part of the provincial governments' contributions, while from the popular side came the demand that it should be used for the purposes of reducing the salt tax to Rs. 1-4-0. Sir Basil Blackett placed the Legislature on the horns of a dilemma by declaring that the surplus could be used for only one of the two things—reduction of salt tax or reduction of Provincial Contributions and asking the popular representatives to choose between them. It was definitely asserted that the amount remitted by the Central Government to the Provinces should be utilised mainly, if not solely, for the purpose of the Transferred department to be expended by them on nation building activities, and on this condition the Legislature assented to the latter of the two alternatives stated above.

Since that year the Central Government has been having surplus budgets and every year a part of provincial contributions is being remitted till at last this year (1927-28) owing to the fixation of the rupee at 1s 6d exchange and to an unusually favourable

monsoon, the Government of India could realise a substantial surplus which enabled it to follow up its declared policy and remit completely the contributions of all provinces. This action on the part of the Central Government was hailed with acclamation by all the provinces and the hope was expressed that it might prove a prelude to the permanent abandonment of Provincial Contributions in future. Whatever the chances of the realisation of that hope may be it must be stated that for the present, the Provinces are put in possession of adequate funds to enable the ministers to carry out schemes of National development, which may have been incapable of execution before or otherwise. The Provincial Contributions have always been felt as milestones round the necks of provinces and an incorrigible dead weight rendering them wholly unable to take the initiative in pushing forward any beneficial and useful schemes in departments like sanitation, public health and education. Their remission or removal will be a great boon to the people and to the Provincial Governments and it is to be the duty of the Provincial legislatures and the Ministers to see that the accrued amounts are spent for purposes for which they are legitimately intended.

What of the future of the Provincial contributions? They have been completely remitted this year but their statutory basis has not been shaken and they may be revived if by chance the Government of India find the necessity for reimposing them next year. So the danger is there still and with it are the grievances too of provinces like Bombay and Bengal, the first harping on the necessity of provincialising the income-tax and the second pleading for a part remission of the Jute-Tax. The question of reconsideration of the whole problem must probably, as has been made out by the Government of India in the Council of State recently, wait till the forthcoming visit of the Royal Statutory Commission, and though as has been stated by Government in the same place, the Provincial Governments have been addressed by the Government of India on the subject with a view to finding out their views nothing can be expected to come out of it. But it has to be pointed out that now that the Government of India has come to stand on its own legs it will be to the fitness of things if the method of provincial contributions is entirely given up. Also the

provinces should be allowed full financial independence and latitude to spend their funds as they like and as events are drifting towards the ideal of Provincial autonomy, it will be very awkward if Provinces have to go on depleting their resources, required for carrying out several important schemes, to fill up the exchequer of the Central Government. The Statutory Commission which is expected to recommend the introduction of political and administrative autonomy in the Provinces should inevitably be and as a necessary corollary to that recommendation go in also for financial autonomy to

the provinces and the abolition of the system of provincial contributions. The Government of India should be made to depend upon its increased receipts from income tax and customs duties to make good any possible deficits in its revenues and leave the provinces to themselves, the more so because the two central heads of revenue noted above are capable of expansion and increased yield while Land Revenue, Excise and Stamps which are provincial sources are comparatively inexpansive heads of revenue. This way lies the progress and prosperity of the country

INDIAN PERIODICALS

Kodak for Good Teeth

The *Indian Dental Review* and excellent monthly journal devoted entirely to topics of dental hygiene and dentistry tells us

George Eastman of the Eastman Kodak Company Rochester N.Y. U.S. America has donated a handsome amount of about forty-five lac rupees for establishing a dental clinic in London. There is also to be found the Eastman Dental Clinic at Rochester U.S. America, which is also the product of Mr Eastman's generosity. The establishment of such a clinic will materially aid to render adequate treatment to the thousands of children working men and women and the poor who through insufficient care of their teeth are the victims of those ailments which beset bad teeth. Such class of people will be benefited from the point of health which will react in greater economic efficiency for the country. It is believed that the researches and investigations made at the Clinic will greatly aid the facilitation of popular preventive dentistry and the standardization of treatment of dental diseases. We have nothing but words of praise and admiration for the broad mindedness of Mr Eastman and above all for his love of suffering humanity that he wishes to serve through the medium of dental clinics. We want here in India a philanthropist of the vision of Mr Eastman.

Mexico takes Care of Baby's Mouth

It appears that Mexico is wide awake to the urgent need of enlightening people about oral hygiene. In India this like other important matters, is sadly

neglected. We should learn from Mexico where we are told by the *Indian Dental Review*

An order of the Mexican Federal Department of Public Health Mexico prohibits the importation and manufacture of baby pacifiers on the ground that they are a menace to the health of the baby. The department has sent out instructions to mothers warning them as to the need for the perfect sterilization of nipples used by artificially fed babies. It is by such steps that the care of the babies can be taken and not by holding once a year baby week shows.

Dentistry in Japan

In the same journal we also find the following

It is surprising to know the progress dentistry has made within so short a period in Japan. The number of dentists in Japan is at present estimated at about 10,000 and they are practising almost everywhere throughout the country. There are five colleges under the control of Department of Home Affairs sending out about 600 graduates every year. Japan also claims two dental colleges exclusively for ladies. They are Meika Girls Dental College and Tokyo Girls Dental College. Fifteen dental periodicals are published in the country.

Prof Sarkar on Indianisation of the Intellect

Progress of Civilisation, Bombay, has some good things to say about the University

of Calcutta and its intellectual preeminence among Indian Universities in connection with Prof Jadunath Sarkar's convocation address at Bombay in the course of which he said

The intellectual resurrection of India was I said the supreme ideal of the Indian nationalist and in realising that ideal the universities had to play the leading part. That was a duty which they could no longer ignore without failing to justify their existence in the changed world. They could no longer be glorified schools mere workshops for turning out clerks and school masters mechanics and overseers translators and copyists they had thenceforward to add to the world's stock of knowledge. They had to achieve intellectual *saukshmya* instead of clothing their peoples in mud with garments imported from Europe. Was political *swaraj* possible he asked could *swaraj* last if given by others in a country which eternally looked up to foreign lands for all additions to human knowledge for all new discoveries in medicine and science for all new inventions in the mechanical arts and the accessories of civilised life and for every leap forward of the human mind in quest of truth?

Hindu Muslim Riots

The *Vedic Magazine* writes

After Bareilly, Cawnpore and Nagpur have paid their toll to communal incendiarism. The number of wounded has gone up to hundreds. Of casualties as well as deaths the majority in both the places consists of Muhammadans. The boast of *The Muslim Outlook* that "the Muslim is the better fighter has been falsified at least in these two instances. To us the victory of either community seems in the words of Mr Roy whose article on a hundred subject we publish elsewhere, to be the defeat of the whole country. Whether Hindus win or Muhammadans the intercommunal scuffles inflict losses on both, and what either section suffers in men and money is so much manhood plus so much wealth wasted out of the common stock which its single owner single proprietor the mother country could have put to better use.

Punishment for Apostasy in Islam

The present craze among some Mahomedans for the assassination of Arya Samajist missionaries who probably preach against Islam and reconvert Indian Mahomedans to Hinduism has led many to think that it is probably through being urged by the teachings of Islam that the assassins prowled about with hidden daggers in search of the Arya Samajist missionaries. M. Zahur Uddin and Bott proves the contrary in the *Islamic World*. We are told that violence against non-believers is absolutely forbidden in the Islamic scriptures. He quotes ex-

tensively from texts and winds up his argument as follows

Surely as for those who believe then disbelieve again believe and again disbelieve then increase in disbelief. Allah will not forgive them nor guide them in the right path (1137). If the apostates from Islam had to meet capital punishment, how could they survive to become Muslims again and then to apostate. These are the only verses of the Holy Quran relating to apostasy. And it will be seen that in none of these is any punishment prescribed for the apostate except the suffering which they must undergo in the next life for dying in unbelief. And why should Islam prescribe punishment for those who according to its teaching die in unbelief? The answer is not far to seek. Do not our actions proceed from our beliefs? Good beliefs undoubtedly lead to good actions and bad beliefs to wrong deeds which undoubtedly bring down divine wrath. Islam wants us all to have good beliefs so that we may do righteous deeds.

It is therefore clear beyond the very shadow of doubt, that the teachings of Al Quran do not give us any clue to the truth of the allegation which has been made by some unjust critics of Islam that Islam prescribes death penalty for the apostates. The fact is that those who spread false reports that Islam prescribes death penalty for apostasy are either deliberately misrepresenting the matter for interested motives or it is due to ignorance on their part. In the latter case they are pardonable but in the former they richly deserve the condemnation of the whole civilized world.

Mr Gandhi and "Mother India"

Current Thought publishes the full text of Mr Gandhi's criticism of "Mother India". Mr Gandhi denies having said the things put into his mouth by Miss Mayo just before he was operated upon by Col. Madcock. He then says

The book is bristful of descriptions of incidents of which an average Indian at any rate has no knowledge. Thus she describes an ovation said to have been given to the Prince of Wales of which Indian India has no knowledge but which could not possibly escape it if it had happened. A crowd is reported to have fought its way to the Princess's car somewhere in Bombay. "The Police," Miss Mayo says "tried vainly to form a hedge round the car moving at a crawl unprotected now through a solid mass of shouting humanity which won through to the railway station at last." Then at the railway station while there were three minutes for the train to steam out the Prince is reported by Miss Mayo to have ordered the barriers to be dropped and the mob to be let in. The authoress then proceeds, "like the sweep of a river in flood" the interminable multitude rolled in and shouted and laughed and wept, and when the train started ran along side of the Royal carriage till they could run no more." All this is supposed to have happened in 1921 on the evening of November 25, whilst "dying embers of the riots

were still hot. There is much of this kind of stuff in this romantic chapter which is headed 'Belold a light'.

The nineteenth chapter is a collection of authorities in praise of the achievements of the British Government almost every one of which has been repeatedly challenged both by English and Indian writers of unimpeachable integrity. The seventeenth chapter is written to show that we are a world menace. If as a result of Mrs Mayo's effort the League of Nations is moved to declare India a segregated country unfit for exploitation I have no doubt that both the West and the East would let the gamers. We may then have our internecine wars. Hindus may be eaten up as she threatens by the hordes from the Northwest and Central Asia. That were a position infinitely superior to one of ever growing emasculation. Even as electrocution is a humane method of killing than that of the torturous method of roasting alive so would a sudden overwhelming swoop from Central Asia upon the unresisting insanitary superstitious and sexually ridden Hindus as Miss Mayo describes us to be be a humane deliverance from the living and ignominious death which we are going through at the present moment.

We entirely agree here with Mr Gandhi. Mr Gandhi then says a few words of advice to the foreign readers of this atrocious book. He says:

I warn them against believing this book. I do not remember having given the message Mrs Mayo imputes to me. The only one present who took any notes at all has no recollection of the message imputed to me. But I do know what message I gave every American who comes to see me. Do not believe newspapers and the cat's paw literature you get in America. But if you want to know anything about India go to India as students. Study India for yourself. If you cannot go make a study of all that is written about India, for her and against her and then form your own conclusions. The ordinary literature you get is either exaggerated vilification of India or exaggerated praise.

But he finds at least some good in the book that Miss Mayo wrote to lower India in the eye of the world and to give an argument to India's tormentors for their acts of oppression. We are told:

Whilst we may be thankful for anything good that foreign visitors may be able honestly to say of us if we curb our anger we shall learn as I have certainly learnt, more from our critics than from our patrons. Our indignation which we are bound to express against the slanderous book must not blind us to our obvious imperfections and our great limitations. Our anger will leave Mrs Mayo absolutely unhurt and it will only recoil upon ourselves. We too have our due share of thoughtless readers as the West has and in seeking to disprove everything Miss Mayo has written we shall make the reading public believe that we are a race of perfect human beings against whom nothing can be said, no one can dare say one word. The agitation that has been set up

against the book is in danger of being overdone. There is no cause for fury. I would close this review which I have undertaken with the greatest reluctance and under great pressure of work with a paraphrase of a beautiful couplet from Tulsidas:

Everything created by God an male or in female has its good and bad side. The wise man like the fabled bird who separating the cream of milk from its water helps himself to the cream leaving the water alone will take the good from everything leaving the bad alone.

Agriculture and Industry Go Hand in Hand

Prof Banerwar Das B S Ch E (M U S A) contributes a valuable article on 'The Importance of Chemical Technology in India to the Bengal Technical Institute Magazine'. He shows clearly that industry and agriculture are closely related and not mutually opposed as some think. Bettering agriculture means the betterment of industry. A single quotation from this article will explain his view point. He writes:

India is principally an agricultural country. So the growth of industries in India should be in keeping with the requirements of Agriculture and the agricultural products. With the improvements made in the agricultural methods the demand for fertilisers is found to go up. Thus the fertiliser industry and the oil industry are of great and immediate importance and are certainly worthy of the proper attention of the Indian financiers and industrialists. The oil industry holds a peculiarly interesting place in India. The oil seeds are the products of Indian agriculture and they are raised in great varieties and huge quantities. The products obtained from these seeds have multifold uses both for edible and technical purposes and they are in ready demand in India and abroad. Also this industry produces a by-product in the form of oil cakes which are good fertilisers. So the oil industry combines in itself the productions of both the oils fats and allied products and the fertilisers.

The main difficulties in the way of the development of oil industry in India along modern lines are in connection with the recovery of oils and the consumption of oil-cakes. Most primitive methods which are very wasteful are still in use in India. These methods give very low yield of oils from the seeds and produce cakes rich in oil content which make them unsuitable for use as cattle-feed and fertiliser. So India loses both ways and she has to be content only by selling seeds to the foreign countries where they recover practically all the oils present in the seeds. India is indeed the queen of oil seeds but the above situation prevents her from being the queen of oils. All industries using and as their principal raw materials can succeed and survive provided they can get oils at a cheap rate. As at present situated this is a great drawback in India for the growth of oil industry. So the first and foremost attention should be directed in India towards the recovery of oils from their seeds by the most

up-to-date methods all of which are quite applicable under Indian conditions with slight modifications

The Next War

Dhangopal Mukerjee discusses the next world War in the *Forward* anniversary number Says Mr Mukerjee

The present European governments are driving their respective peoples into a world conflict as surely as a butcher drives the sheep and cows to slaughter Unless the common humanity of the nations asserts itself against the mediocre policies of their politicians there is not a thing on God's earth that can prevent the sinister catastrophe One does not have to quote statistics to prove the validity of the above statement Metaphorically speaking the powers of the West love peace, and are working for peace with a much gusto as a tiger toils for vegetarianism

Problem of the Indian States

Lord Meston's review of Mr H M Panikkar's book *Indian States and the Government of India* which appeared originally in the Sunday times has been reproduced in the *Foundatory and Zemindary India*. Regarding the history and character of the Indian states we are told

"The States, Mr Panikkar writes and their relation with the British Governments afford no parallel or analogy to any institution known in history The political system they represent is neither feudal nor federal though in some respects it shows similarities to both It is not an international system nor would it be correct to consider it a political confederacy because the constituent States have no rights of secession By way of further complication is the variety of their types At one end of the scale stand full powered sovereign States like Hyderabad and Gwalior the latter nearly as big as Scotland and the former more than twice the size of Greece Their rulers in turn Mr Panikkar says enjoy legally unrestrained powers of life and death over their subjects, and make promulgate and enforce their own laws and maintain their own armies At the other extreme are petty chieftains, lords of a few thousand acres, with about the same powers as a country justice And between them great and small they occupy one-third of the whole Indian peninsula.

Towards the beginning of British rule in India, the East India Company absorbed such states as were weak, whenever it could do so without much risk But

The Mutiny of 1857 showed the dangers of a policy of absorption such as the was effected by the East India Company and Queen Victoria gave a solemn promise to maintain all treaties and engagements into which John Company had

entered with the States This promise scrupulously observed in the letter has not always been respected in the spirit

There was a period in which the cult of efficiency and uniformity was vigorously pressed The older fashioned rulers murmured but Lord Curzon was firm He told them that they were vassal chiefs and that the British Crown with their feudal sizeran Wiser counsel subsequently prevailed and when it fell to Lord Reading to read his recent lecture to the Nizam of Hyderabad he took as his text the responsibility that rests on the British Government for preserving peace, good order and decent administration throughout the country as a whole After many variations of policy interference in the domestic affairs of the States has now been confined to strict necessity

This does not mean liberty for the Indian princes For we are told

At the same time there are very definite limits to the independence of the Princes The British Government in India runs its own railways and telegraphs through their States it does not as a rule let them mint their own coins it gives them no voice in the tariff of the country and no share in it proceeds it refuses to let them combine or quarrel among themselves and it allows them no status in foreign policy To some extent these restrictions are encroachments on the old treaties of equality and alliance But the Princes have reserved ample compensation in being sheltered from external aggression and internal revolution

They evidently are not contented with their lot, as we can see from the following words of Lord Meston

The Princes, or some of them took the unusual step of sending a mission to London this year in connection with their complaints of diminished sovereignty But they do not all forget how they and their forefathers have been protected by the power of England from the manifold risks that beset small and weak States all the world over

At the present moment one of the major preoccupations of the princes is their future relation with a self governing (?) India Lord Meston tells us

What disturbs them more than any encroachment on their rights is the future of the Nationalist movement in British India As patriotic Indians themselves, they cannot wholly stand on it and they certainly cannot condemn it a few of them have paid it the compliment of establishing dim colourless copies of a legislative assembly in their own territories But the prospect of a demand for the real thing among their people is by no means to their taste Still less do they relish the possibility of India as a self governing Dominion from which British control has been entirely withdrawn They have neither the machinery nor the experience for international relations with democratic neighbours, and sympathy with Nationalism in the abstract is a different proposition from daily co-operation of equal terms with Nationalist leaders Thus it is with the keenest vigilance that the Princes are watching the development of the new constitution in India, and seeking for safeguards.

Histrionic art in Germany

Bernard Held writes on *The Modern Theatre and Histrionic Art in Germany in Shamaa*. He says

German histrionic art is young. It is scarcely 700 years old. It has no such great traditions as the English theatre has inherited from Elizabethan times or the French theatre from the days of Molière but it has with energy shaken off the shackles of foreign influence and developed a vigorous line of its own. It has traversed some long stages in its journey first from the days of Caroline Neuber to Goethe's theatre at Weimar thence to Laubach's Burg Theatre and the Court Theatrical Company of Meiningen which gave birth to stage management afterwards came the liberation from the mannerisms of the 19th century which had to make way for freedom of gesture and of speech. The close of the last century saw a fresh development under Brahms which paved the way for Max Reinhardt who in the opening years of the present century consolidated the preceding styles. Reinhardt combined delight in colour and sound and the love of truth to nature so characteristic of the Meiningen school with Brahms' veneration for the text of the poet and his severe naturalness. Like Brahms he tolerated no false artificiality of tone or gesture but he also banned false scenery and made it harmonize with the human elements of the stage.

However there is no lack of creative minds in the German theatrical world at the present time. Among the managers who have inspired the stage with new life the most prominent is Herr Leopold Jessner of the Berlin State Theatre. Though benefiting to the full by Reinhardt's pioneer work he nevertheless goes his own road. Whereas Reinhardt, with his inexhaustible and untamable fancy ignores all bounds Jessner urged by a desire to reduce everything to the simplest formula seeks to set limits and to condense stage ideas both in scenic effect and in linguistic expression. Continuing the decanonization of poets begun by Gerhart Hauptmann in his production of *Wilhelm Tell* he claims for the stage manager the most unfettered liberty to adapt the poets' work to the ideas of the living generation. In contradistinction to Reinhardt for whom art is its own end and aim Jessner regards the stage as the arena of philosophy—as the political instrument of the State and of its constitution. In doing so he can cite as a prototype the theatre of Shakespeare's time whose stage reflected the political life of the Elizabethan period. In this matter indeed Jessner is outstripped by Erwin Piscator an exceptionally capable histrionic artist who goes so far as to turn the stage into a tribunal and enlist it in the service of a political doctrine.

In order to promote histrionic research and the study of the theory of dramatic art chairs have been established at several Universities, e.g. Berlin Kiel Cologne Munich and Frankfurt they serve to produce thoroughly trained experts. Thus everywhere life and development are visible. The projected Bistron Exhibition at Magdeburg is intended to provide an epitome of every phase of theatrical life at the present day.

The consolidation of economic conditions upon which the theatre depends, will lead to a consolidation of the theatre itself. The future belongs not to any merely liberated ecstatic or constructive theatre but to the theatre which is most deeply human. It is this living human element which like a magnet, has ever attracted humanity to the theatre and it is this direct human magnetism this irrepacable something which makes the theatre imperishable and just for this reason, broadcasting and filming wonderful and indeterminate as their possibilities unquestionably are, can never seriously jeopardize the stage and its living cast.

A Buddhist Vihara for Britain

The following appears in the *Mahabodhi*

Negotiations are being carried on for the purchase of a suitable plot of land in London for the purpose of building the first Buddhist Temple for the use of the Buddhists of Europe. For over a hundred years the different Christian missionary societies have been working in Ceylon to propagate the religion of Jesus among Sinhalese Buddhists. The result of their labours has been fruitful. Children of Buddhist parents by the thousands have been baptized and converted to the Galilean religion during the last century. The poor Buddhist parents did not anticipate that their children would be converted by the missionaries when they let their sons attend the missionary schools. A hundred years ago there were a few thousand converts who accepted Christianity for the sake of worldly gain. The late Colonel Olcott arrived in Ceylon in 1880 and accepted Buddhism along with the late Madame Blavatsky, and the result of his conversion was that he opened the eyes of the Buddhists and pointed out the danger of sending Buddhist children to missionary schools. The Catholics have their schools and the Baptists Wesleyans Church Missionary Society Church of England have their denominational schools which are attended by Buddhist youths. Each mission tries to convert the Buddhist youths and the result is that thousands of them have joined different denominations. The Buddhist Bhikkhus were the custodians of Buddhist youth for 21.8 years. But in 1870 the Christian government began establishing vernacular schools in different parts of the island and compelled Buddhist parents to send their children to them. The Temple schools had to be closed and the Buddhist youths passed thenceforward under Christian influence. The missionaries found the opportunity to sow the seeds of their faith through schools and they got permission to open their denominational schools throughout the island from Government. By diplomatic means the Temple schools were closed and the Buddhist Bhikkhu teachers were warned that they dare not try to get Buddhist boys back to their temple schools. It was an outrage but the simple minded unsophisticated Buddhist Bhikkhus through fear of Government censure let the Buddhist children go out of their control. It was a shameful trick the missionaries played knowing the harmless

nature of the Buddhist priesthood. Government officials helped the white skinned missionary to open more schools for the conversion of Buddhist children a procedure which would not be tolerated in any Christian country.

The time is come now to give the sublime teachings of the Lord Buddha to the natives of England and enlighten them about Buddhism and expose the missionary fraud.

The enlightenment of the natives of England regarding Buddhism has become a necessity. To preach the Dhamma to the English people it is necessary that Buddhists should have a temple in some part of London for the present. Science is in favour of the noble Religion of the Lord Buddha. In fact Buddhism is Science. When the people of England listen to the Doctrine of the Lord Buddha they will understand the difference between the Aryan Doctrine and the Jewish religion of Jesus.

There are Buddhists in China, Japan, Korea, Siam, Burma, Tibet, and Ceylon. In all these countries there are thousands of missionaries preaching the Jewish religion to the unsophisticated natives. The time is now come for Buddhists to establish a Buddhist Mission in London. For the first time the Maha Bodhi Society has established a centre in London, and operations are going on since July 1926.

To build a Buddhist Temple in a suitable quarter in London we have to purchase a vacant plot of land. The cost of land will come to about £4,000. To put up the necessary buildings another £10,000 would have to be spent. We do not attempt to compete with the various Christian denominations in converting the English people to the Aryan religion. But we do want to present the Doctrine of the Lord for comparison. Jesus was an Asiatic, the Apostles were all Asiatics and speaking psychologically Christians have an Asiatic orientation.

The British since the third decade of the 19th century have come in contact with Buddhism. It was an Englishman, by the name of George Turnour who translated the Pali Mahavansa into English. It was an Englishman—Brain Houghton Hodgson—who presented the complete Sanskrit collection of Buddhist scriptures to European libraries.

The gift of the Dhamma excels all other gifts said the Lord Buddha. To preach the Dhamma a Vihara Hall is a necessity. We require £10,000 to begin work.

We hope Buddhists all over the world will respond to this request of the British Maha Bodhi Society. There are millions upon millions of Buddhists who would like to give the supreme gift of the Dhamma to the people of England.

Sabbha Danam Dhamma Danam jina!

How Calcutta's Health is Looked After

The following facts supplied by Dr. T. N. Mazumdar, the Health Officer to the Calcutta Corporation are taken from the *Calcutta Medical Journal* organ of the Calcutta Medical Club.

1 For the supply of a pure and wholesome water the water is examined daily in Calcutta and Palta by analysts who make a chemical and bacteriological examination.

2 A staff of 15 Assistant Sanitary Officers enquires into all the deaths occurring in Calcutta and in cases of infectious diseases takes preventive measures regarding isolation, vaccination, inoculation and removal of patients to Hospitals etc.

3 A staff of Disinfecting Inspectors disinfects the premises after recovery or death of patients in case of infectious diseases. The beddings, clothings etc. are disinfected at the Steam Disinfecting Station.

4 Fifteen charitable dispensaries started by the Corporation are doing very useful work in giving free medical relief.

5 There are now seven maternity centres 4 in Calcutta proper and 3 in the added areas. There is a staff of 5 lady Health Visitors and 22 midwives. They attend to the poor people in houses free of charge. About 5,000 deliveries are performed by these midwives. There are two maternity homes with 32 beds and more than 500 cases are delivered annually in these homes. This Maternity and Child Welfare Work started by the Corporation about 15 years ago has proved a great boon to the poor houses people and has helped to reduce the maternal and infantile mortality.

6 There is a staff of 20 Sanitary Officers who attend to the nuisance unsanitary buildings called sheds, stables etc.

7 There is a staff of 10 Food Inspectors and this is totally inadequate for Calcutta. At present 6,000 samples are collected annually by the Food Inspectors of which about 10 per cent. are found to be adulterated. About 1,700 prosecutions are being instituted in a year by the Food Inspectors and Slaughter House Inspectors for selling adulterated and unwholesome food. The scheme for increasing the number of Food Inspectors, Analysts for reorganisation of the Food Inspectors Department and Laboratory is under the consideration of the Public Health Committee. With an increased number of Food Inspectors adulteration will be effectually checked.

In the 5 Corporation Slaughter Houses the Superintendents are Veterinary Doctors and all animals which are diseased are rejected and diseased meat is destroyed.

8 A fleet of 12 Ambulances is available by day and night to remove patients suffering from infectious diseases or accident cases to Hospitals free of charge. A grant of about 2½ lakhs is given annually to the different Hospitals by the Corporation. Recently a grant of Rs. 500 has been given to the National Medical Institute for opening a venereal disease ward. A long felt want of the city has been removed by the opening of a home for the incurable with 30 beds this month in Manicktolla.

The conservancy of the city is under the Engineering Department. Roughly about 13 lakhs of rupees are spent annually on the Health Department including about 27 lakhs of rupees, which are spent annually on conservancy and drainage system—the total annual cost amounts to about 40 lakhs of rupees on "Health and Sanitation of Calcutta," which is about 17 per cent. of the income of the Corporation.

Science of Motherhood in India

Man in India a journal of anthropology publishes an account of popular beliefs in West Bengal regarding conditions influencing the birth and growth of beautiful children. We quote portions from it.

Ladies believe in prenatal influences in the making of the child. The ladies do not prescribe heavy spicy and heating diets for a woman big with child. Light and healthy foods are said to be good for the child in the womb. Above all a mother's cheerful frame of mind conduces to the health of the child in the womb. A pregnant woman is required to take special care of her health from after the fifth month of pregnancy. She should take moderate exercise every day, otherwise the delivery will be painful and the child sickly and idle. Ladies believe that if a woman occupies herself with reading good books like the Ramayana and the Mahabharata after the fifth month of pregnancy the child born of her womb will keep an unsullied character throughout life. The belief is fairly common that the mother's food and the mother's thoughts during pregnancy contribute to the making of the child both physically and mentally.

Regarding beautifying children that are born, we are told many things. One is

A snub nose is a very great disfigurement in this country. Old matrons believe that this defect can be remedied if steps are taken immediately after birth and their belief stands to reason. Stretch your legs straight and put the child on them lying on its back. Apply mustard oil slowly on the nose and raise it up lightly so that the child may not feel the pinch. This process repeated day after day for a month or so cures the defect. Matronly ladies say that a snub nose is often the result of giving the baby suck in a lying posture so that the pressure of the mother's body falls on the end of the baby's nose. This is perhaps to some extent, correct.

A good deal of science is found in the above as well as in the following.

Elderly matrons fully believe in the efficacy of sunshine on the health of the babies. They make it a point to expose them for sometime everyday to sunshine. The belief is quite in keeping with the modern theory about the healing effect of the sun's rays.

Readers of Miss Mayo's "Mother India" will find something of interest in the above strictly anthropological findings. They show that commonsense and (empirical) science grows in all soils, not on the American kind alone. It will also show that illiterate people are often educated in their beliefs and conduct.

finds a similarity between the Duce and Napoleon.

The mantle of Napoleon, some people think, has fallen upon the shoulders of his Italian prototype Signor Benito Mussolini. Indeed there is a remarkable resemblance between the two. Both are Italians by birth, both have risen from the ranks to the highest position in the sphere of their activities, both have magnetic personalities and there is also a physical similarity between them. They are men of superhuman energies whom the world cannot easily forget, and history bears the impress of their names. The career of Mussolini reads like a romance. The son of a village blacksmith and innkeeper, he occupies to-day the most responsible office under the Italian Government. Workman, Schoolmaster, Journalist, Socialist thinker, Soldier and Scholar he is now one of the foremost statesmen in the west. A life full of adventures, a life of ceaseless work, dedicated to the service of his motherland, a life which has experienced numerous difficulties and passed through great dangers, the Duce is the centre of all activities of Italy and is a man at once loved and hated.

Mussolini is autocratic.

He makes his own laws and dreams of a greater Italy such as Dante dreamed in the 13th century in *De Monarchia*. The big talks and high sounding promises of clever diplomats do not in the least delude him. His one ambition is to make Italy powerful in the political arena of Europe and supreme on the Mediterranean Sea and his mind goes back to the golden age of the Imperial Caesars.

His sole political philosophy is as follows.

"I have no politics," he said. "I have only one message—Love your land." In the face of the gravest dangers Mussolini is composed and self-controlled. "My path lies through the terrible," he said.

Regarding detractor of Mussolini the author says

But little do they think that he works not for any personal gain but for the good of his country. If patriotism be a vice then all patriots alike are to be condemned unequivocally. The Fascist methods may be somewhat cruel but perhaps Italy needs fascism today. Elsewhere in Europe there is chaos and unrest. The political equilibrium of Europe would be in a state of convulsion at the slightest sign of unrest. He holds Italy in his firm grasp and is the ironman of Europe and fears nobody. There is a story that his son Bruno was asked by his teacher as to whom the imperative mood should not be used. Why the King and my father, was the prompt reply.

Also

He is accused of suppressing the liberty of the Press of free speech and freedom of thought. But are there not governments today which are forging fresh fetters for strangling freedom of utterance, discussion and faction? Perhaps his greatest fault in the eyes of his enemies is that there is no cant or nonsense about him. He does not play that game of hide and seek which in

Mussolini, the Iron Man

Jayanta Kumar Das Gupta writes on Mussolini in *The Indian Educator* He

polite circles goes by the name of diplomacy. He would not call a gentleman a rascal behind his back. He would say it to his very face. When Mr Baldwin declared that Britain did not require a dictator like Mussolini the Italian Premier boldly retorted that it was unbecoming on the part of a man holding the most exalted office under the British crown to speak ill of another and he did not expect so from a gentleman.

He sums up

He is one of the makers of history like Bismarck, Cavour, Lenin and Sun Yat-Sen and the world watches his achievements with interest.

A Christian Reviews Mother India

The following are quotations from a review of Mother India appearing in *The National Christian Council Review*.

Two facts that struck me immediately on opening this book gave at once an unfavourable impression. The first was this passage in a review from the *New Statesman* quoted on the dust cover. She makes the claim for 'swaraaj' seem nonsense and the will to want it almost a crime.' The second was this sentence describing Calcutta—the second in the first chapter—'In the courts and alleys and between many little bookstalls where narrow-chested near-sighted anemic young Indian students in native dress trooped over piles of fly-blown Russian pamphlets.' The former of these produced an unfavourable impression for the reason that it was evident that this book was being seized upon—with or without the goodwill of the authoress—for purposes of political propaganda, and that this was being done by such a reviewer as the one quoted with a shout of exultation and relief. Further the second passage quoted—so obviously untrue and ill-natured—gave plain warning that the writer was bent on discovering the worst things discoverable about India and then varnishing them with something like gusto. These fly-blown Russian pamphlets obviously exist only in her inflated anti-Bolshevist imagination.

The first may be subconscious but a quite virulent bias lurks behind every page, with the result that the picture that the whole book presents is untrue. Her attitude is indicated in the space that underlies the very title of the book and all through she gives the impression of imputing a 'colon' of mind beetles. What compels in Miss Mayo's mind behind this approach I cannot determine but perhaps one is the feeling that America has been taken in by smooth-tongued Muslims and Syrians with their egregiously false allegations about conditions in India' (p. 23). If so, Miss Mayo has reacted with unnecessary violence in an opposite direction.

'Mother India' Again

In the editorial notes of the same journal (Editors: Rev N Macnicol, D Litt, and Rev P. O Philip, B. A.) we find another

reference to the charges brought against India by Miss Mayo. It runs as follows.

This book *Mother India* brings charges of this kind based upon wholly inadequate knowledge of the people and in bringing these charges, it does grave injustice we believe, to India and to those who from among her people have long been labouring for the removal of evil customs that hinder her progress. There is no evidence that this book was produced in any sense in the interest of Christian Missions. The interest of Christian Missions can never be served by ignorance or by exaggeration.

A Lady gives Miss Mayo her Duo

Margaret E Cousins, B Mus., writes in the *Young men of India*

I have lived in India for twelve years in intimate friendship with the women of India, with its students and with its political and social reformers. I am neither a Government servant nor connected with official or missionary circles. I am a lover of humanity and work for it through seeking the advancement of womanhood to an equality of honour and opportunity with manhood. My work along those lines was viewed so favourably that I was the first woman honorary member appointed in India. These facts give me the power to pass judgment on Miss Mayo's book and while my experience corroborates a large number of her facts and illustrations regarding sex health, uncleanliness and the treatment of animals, I aver that the total impression she conveys to any reader, either inside or outside India, is cruelly and wickedly untrue. Unless read in conjunction with supplementary books on other aspects of Indian life and culture, or unless it is withdrawn from circulation outside India, it will create nothing but race-resentment and a fortune for its cleverly stupid authoress.

assembly tactics that broke the majority for the Bill as a whole. If the British members of the Assembly had supported the Bill girls of 14 would not now be legally approved mothers. We women definitely charge the British Government with delaying social reforms for which the people of the country are ripe.

Even despite inaccuracies I thought Miss Mayo was sincere till I read the chapter on the Prince and the Untouchables. That showed her hand; it proved to me that yellow journalism, sentimental gullibility and a bias in favour of British domination over ruled her vaunted open mindedness. The latter half of the book I leave more to politicians and economists to set right. She deals with problems sentimentally and superficially which cannot be separated from philosophy, religion and the 4 cat ethics of the right to self determination. One feels that where she allows herself to show discontent with Britain's rule it is only where she thinks that America would manage India better. This comes out especially in her review of education.

Miss Mayo uses the Sob Stuff to rouse a feeling of horror in the mind of her readers by describing animal sacrifice in the temple of Kali. She uses this to prove the necessity of British rule in India. Says Mrs Cousins:

She omits to tell that while Britain allows blood sacrifices in British India the Maharani, Regent of Travancore an Indian State prohibited

all animal sacrifices in her State as her first administrative act on becoming Regent.

Then we are told

She omits all good points in India's favour such as the fact that lunacy is fourteen times less prevalent in India than in England, that India's expenditure on drink is only a fraction proportionately compared with the one million pounds spent daily in Great Britain on alcoholic drink.

Defects can be found in all nations, but that would not justify foreign rule anywhere. Says Mrs Cousins:

On the same analogy America should govern Japan because of Japan's geisha system and more repellant sanitary system than even poor India. Holland should govern America because of America's political graft system and its record of being the most crime-ridden country in the world and so on round the world and only then might people sleep easy in their beds secure from world menace. Her argument has only to be stated thus to see how stupid it is: but people are so credulous and so ignorant that they will believe she has drawn an accurate picture. Those who are stimulated by the strong feelings that the book is raising to judge truly for themselves should read also *The Web of Indian Life* by Sister Nivedita (Longmans Green London), *India Bound or Free* by Mrs. Besant (The P. House Madras), Radhakrishnan's *The Hindu View of Life* and my own *The Awakening of Asian Womanhood* (Ganesh & Co Madras price Rs. 2).

FOREIGN PERIODICALS

Mussolini Prophet of the Pragmatic Era

Under the above caption W. Y. Elliot of the Harvard University analyses the Political Philosophy of Fascism in the *Political Science Quarterly*. The article is of academic importance and does not deal with popular likes and dislikes regarding fascist deeds. We are told:

Fascism is a repudiation of the old liberal utilitarianism of the English Radicals of 1832 in favour of the older psychological pragmatism of Machiavelli. Liberalism says Mussolini is not the last word; it does not represent any final and decisive formula in the art of government. In this difficult and delicate art which deals with the most refractory of materials, not stationary, but always in movement since it deals with the living and not with the dead, in this art of politics there is no Aristotelian unity of time of place and of action. Men have been governed more or less fortunately in a thousand different ways. Liberalism is the contribution, the method of the nine-

teenth century. It cannot be said that Liberalism is a method of government good for the nineteenth century for a century that is to say dominated by two essential phenomena like the development of capitalism and the growth of nationality should be necessarily good for the twentieth century which already betrays characteristics differing considerably from those of its predecessor. Facts outweigh books: experience is worth more than theory. To day the most striking of post war experiences those that are taking place before our eyes are marked by the defeat of Liberalism. Events in Russia and in Italy demonstrate the possibility of governing altogether outside the ideology of liberalism and in a manner entirely opposed to it. Communism and fascism have nothing to do with Liberalism.

Fascism is pure utilitarianism. We read:

To parallel Lenin's Democracy is a mere bourgeois superstition. Mussolini concluded the attack on Liberalism quoted above. Know them once and for all that Fascism recognizes no idols adores no fetishes it has already passed over the more or less decayed body of the goddess Liberty.

and is quite prepared if necessary to do so once more

In Fascism we find an undeclared adherence to political pragmatism and to nothing else

Although they have not always so named it and although only its protagonists attribute to the movement a profound underlying idea Fascism has come to mean to the popular imagination just this application of pragmatism to politics. Mussolini attributes his own intellectual shaping to William James on equal terms with three great pragmatists in politics: Machiavelli, Nietzsche and the vendicant, Georges Sorel.

This is nothing new or original for

The practice of politics has never been other than pragmatic. A stand on principle may be the nobler gesture may even be a necessary sop to man's compensatory desire to idealize his pursuit of deeply rooted instinctive interests. But rationalism too often serves only as a cloak for imperative and unreasoned desire. That at least is the way the matter looks to the political pragmatists of our own day.

The Nineteenth Century was prolific of ideas and all else that a mere quote not the real thing achievement and the making of all theory as means to the great end. What got the upper hand then were the doctrinaire efforts of an idealism which attempted to put a curb on the play of interests. Hence the reaction.

Fox populi had spoken the Lord's face was turned against points and such abstractions. The political prophets preached a new gospel—pragmatism the reasoned distrust of rationalized solutions.

And

The very Mahomet of this worship is Mussolini. Ideological programs and a superstitious reverence for the formal democracy of the ballot box had led his Italy to a state of anarchy approximate that before which the medieval republics of the cities had bowed.

A little knowledge of Italian affairs is necessary to appreciate Fascism.

After the war an Italy badly divided sabotaged by Communism grew sicker and sicker under government by blocs (government by unequal coalitions by log rolling and finally by *diritto legi*). It all amounted to no government at all. Machiavelli's Prince was not more needed when he wrote to raise Italy from her divided weakness than was a dictator now—one strong enough to seize the reins of government power from the lax hands which refused to tighten them on syndicalistic violence. Under such conditions it was natural that Fascism symbol of united power in a single hand should gather strength until it swept the slate clean of timid parliamentary equations and inscribed in a bold hand the single word Force!

The demand of the present age is not theory but deeds. If one professes good things

but fail to achieve any good he should be put second to one who professes nothing but does a lot of good.

Parliamentary government—we have the high authority of Lloyd George for it—means government by talk. But as ex-Ambassador Child put it: When a spirited people cannot stand it any longer they act. Talk and party conferences and social theories and sentimentality are luxuries enjoyed by these people who do not face intolerable situations. When a people face an intolerable situation the real ravenous hunger is not for a program but for a man. This apology for fascism broadcast through the columns of the *Saturday Evening Post* is accurate enough. Yet it is perhaps worth nothing that it is only these peoples who insist on the luxury of party systems and the sentimentality of social theories who arrive but rarely at intolerable situations on the other hand nations who are forever in search of the man, not the program seem to find almost all situations equally and chronically intolerable after a trial more or less brief.

As for programs apparently Ambassador Child was sufficiently interested in the Meaning of Fascism to make some inquiries of Mussolini even when the Black Shirt was still a bravado gesture. This is his report of the interview:

Well I said what is the Fascist program? It is easier to smother the tulle than to steer the boat.

Program, he said. My program is work discipline, unity. He shot another look at me and saw that I was doubtful about vague slogans. He said with tremendous conviction: "Programs are endless. It is the organization—it is the men—it is action not talk. It is men."

There you are the program of the politics of the period is action—not talk, not theory.

The 'Common Front' against Bolshevism

When England broke off diplomatic relations with Russia it was bawled out by the Empire critics the press that this was the beginning of the end of Bolshevism. Now would we see a general rising against Russia among all capitalistic countries. But what happened actually was comic to the extreme. Instead of copying Britain's heroic gesture other nations concentrated on capturing the trade with Russia that was given up by the former country. Thus one reads in the *Living Age*:

Standard Oil an all-powerful American corporation has concluded a contract with the Soviet Commercial Agent to market Russian petroleum abroad. Just now that is the only commodity the Soviet Government is able to export in large quantities and if she could be prevented from so doing that she would soon be bankrupt. But the Americans have taken advantage of the elimination of the British competitors to strike a bargain with the Soviets. They put up the money the Russians put up the oil. Thus Standard Oil

it entails an enormous mental suffering and unhappiness. If civilisation is a race towards a happier state of things infant mortality must slow up with its progress and social vigour obtained in a more beautiful economical and sensible way.

Prof Rushbrook Williams on Mother India

Prof L. F. Rushbrook Williams reviews Miss Mayo's *Mother India* in *The Asiatic Review*. He welcomes the boldness of Miss Mayo on writing on an aspect of the Indian question which others always leave untouched. Prof Rushbrook Williams does not appear in his review to have guessed the sinister motive of the authoress in writing a book whose sole object is to lower India in the eye of the world. Very strange for one of his erudition and intellect but very natural also for other reasons. Miss Mayo's undemocratic spirit seems to have pleased Prof Rushbrook Williams. He says:

Unlike the majority of her countrymen Miss Mayo regards democracy with little favour. So far from considering it the panacea for all ills whether social or political she seems to be an upholder of the heretical doctrine that it is a highly specialized form of government depending for its success upon certain factors that are by no means universally present.

The learned professor would probably discuss liberty or the right to keep one's money in one's own cash box to the same vein.

But even he fails to admire Miss Mayo's logic. He says:

Where Miss Mayo cites chapter and verse for her statements she proceeds to generalize from a few dozen examples, and to apply this generalization to hundreds of millions. For some of her most startling assertions she cites no statistics at all. How does she know that from one end of the land to the other the average male Hindu of thirty years provided he has means to command his pleasures is an old man and that from seven to eight out of every ten such males between the ages of twenty-five and thirty are impotent? I am quite at a loss here. I should have thought that the decennial statistics of the population to say nothing of common observation would have suffered to give the lie direct to any such assertion. Miss Mayo may have unchallengeable authority for her statement. If so she should surely quote it.

He sums up though in a different strain.

She has illuminated one side of the Indian problem in such fashion that it can hardly succeed for the future in evading the attention which it deserves but does not invite.

No mention however of her 'illumination' of many things that do not exist at all or only in a very small way. No mention of the overlooking of all good points of Indian life. No mention again of the contempt expressed throughout for India and of the inordinate admiration of the British whose misdeeds are conscientiously painted over with exaggerated praise all through.

Yet another Condemnation of "Mother India"

M. M. Underhill reviews the above book in the *International Review of Missions*. She writes forcefully against Miss Mayo's silly generalisations and blindness to most vital things connected with India. The reviewer who is a lady, says:

She was warned before starting for India not to generalize. And it is possible that she honestly tried not to generalize but she has nevertheless done so and has produced some quite appalling statements. That the Indian girl in common practice looks for motherhood nine months after reaching puberty—or anywhere between the ages of fourteen and eight—is simply not true. Had Miss Mayo given herself but a few years to live in India and to watch the family life of even a small circle of her neighbours she would have known better. Religion in the West forbids much which is nevertheless sometimes done. Hindu custom sanctions much which is nevertheless usually not done.

She also condemns Miss Mayo's strict exclusion of all references to the many Indian individuals and institutions working for the betterment of Indian life.

It is hardly fair to report unsavoury details of the breach of hygienic laws or revolting deeds of cruelty whether to man, woman, child or beast, with never a word of those who are spending their lives in fighting just those very evils. The passing mention of Indian volunteer associations, partially pledged against Untouchability which include the Servants of India, avowedly political, Lord Sinha's society for the help of the outcastes of Bengal and Assam, the Brahmo Samaj and others is as far as we can find the only reference to the existence of societies promoted and carried on by Indians for the social, moral and spiritual uplift of their fellows unless the vague statement in the concluding chapter that there are other facts is meant to cover them. Did Miss Mayo really meet no kind hearted, decent, loving husbands and fathers in India?

Then there is a general valuation of Miss Mayo's original discoveries and great insight into Indian thought and feeling.

In a book announced as totally unlike any other book on India one would not expect to come across that hackneyed statement of the hypothetical

jealous defender of private property though it may be in Mexico is buying petroleum in Russia from wells expropriated by the Soviets from the Royal Dutch Company.

Something similar has happened in case of Italy and Russia. Italy, to be sure recognized the Moscow Government some time ago but since then relations between the two countries have been anything but cordial. Only the other day far example Rome recognized Rumania's title to Bessarabia whereupon the indignant Russians began to boycott Italian goods. One would suppose moreover in view of the agreement upon general policies which seems to exist between Italy and England, that Mussolini would keep step with Sir Austen Chamberlain in this matter. But Italy must find markets for her products and manufactures she wants more territory and she needs even more urgently outlets for her goods. Now Great Britain's break with Russia promises to produce a market vacuum in the latter country for Italian manufactures to fill. So the Fascist press now advocates closer commercial relations between the two countries and Italian financiers propose to found an institution at Rome to subsidize exports to Russia. Simultaneously Moscow has tripled its deposits in Italian banks for buying Italian merchandise. We know definitely that the Russian Government promptly transferred to Rome the five million dollars gold more or less that it had in London banks in order to pay for goods that it originally intended to buy in England but has now decided to buy in Italy.

So much for the common front against Bolshevism.

Newer Methods of Cancer Treatment

We find the following in the *Lancet* Digest.

New hope for sufferers from certain forms of cancer heretofore regarded as incurable was held out by Dr. Joseph Muir of New York recently at a demonstration before the Cancer Research Congress in Vienna, of a new type of radioactive seed for implantation in diseased tissues. Says the Vienna correspondent of the *New York Times*:

While Dr. Muir said his method was of too recent development to claim permanent cures, he expressed confidence that it would prove more efficient in destroying the malignant process than the hit or miss methods which were all that were possible under the old conditions. The seeds, each no longer than the head of a pin, contain radon, a radioactive gas far less costly than the forms of radium previously employed and therefore may be made available to practically every sufferer. The containers, he explained, are so devised as to overcome two great drawbacks which have heretofore lessened the usefulness of the method—burning with subsequent necrosis of the tissues exposed to the radium and the necessity of leaving the seeds permanently in the radiated area. The new seeds, are screened with platinum which cuts off all caustic rays and the containers as soon as their usefulness is ended. The seed particularly lends itself he

said to treatment of cancer of the esophagus, one of the most deadly of all forms of cancer. Dr. Muir was for several years physician-in-chief at the New York Throat, Nose, and Lung Hospital. Abandoning the field of medicine for a few years, he served as Consul General at Stockholm and later as Secretary of the Legation to Norway and Sweden. Returning to medicine, he has devoted himself to radium therapy. On leaving Vienna, Dr. Muir will take his seeds' to cancer centers in Berlin, Paris and London.

When King Sisowath Went to Paris

In the same journal there is an account of the visit of the late King Sisowath of Cambodia to Paris. We are told:

The King of Cambodia arrived as a real potentate from ancient Asia should. The jewels worn by him and his entourage were worth 100,000,000 francs and the French police temporarily suspended all other activities to guard the weavers of this treasure.

The King also brought with him the Sacred Sword of Cambodia, reputed to be 3,000 years old and studded with jewels valued at \$3,000,000 and the Three Bakous guardians of the sword, whom rumor soon invested with all the mystery and glamour of fabled giants.

The 100 dancing girls were covered with diamonds, rubies, emeralds, topazes, carbuncles, tourmalines and sapphires, and those who saw them heartily approve of King Sisowath's name for them, The Living Jewels.

But their costume for the Sacred Dance was as unique as it was costly. For it consisted of gold wire fitting tight to the figure and more concealing than silk and President Fallières and Madame Fallières who were pious folk and hesitated before allowing the Cambodian ballet to appear before them later admitted their scruples had been unfounded.

In addition to the gold wire costume, the dancers wore a gold helmet incrustated with diamonds, emeralds and rubies set in a design which dated back to 1000 B.C.

Rodin the famous sculptor was among those invited to see the ballet dance. And he went crazy over the dancing girls. He spent many days watching and sketching them winning their confidence by giving them little presents as if they were small children, candies, toys, beads, fruit and other trifles. They pouted and smiled unless he came to them with his pockets bulging with these gifts. But Rodin was happy and even thought for a while of traveling back to Cambodia with them.

Rodin writes about these dancing girls in his reminiscences as follows:

"Never was the human form earned to greater perfection. These Cambodians have movements I had never seen—never would have thought possible to the human body. Antique sculpture in its interminable richness has not revealed these movements to us.

They are full of movement, there is a rhythmic shudder that passes along them from

it entails an enormous mental suffering and unhappiness. If civilisation is a race towards a happier state of things infant mortality must slow up with its progress and social vice, our obtained in a more beautiful, economical and sensible way

Prof Rushbrook Williams on 'Mother India'

Prof L. F. Rushbrook Williams reviews Miss Mayo's *Mother India* in *The Asiatic Review*. He welcomes the boldness of Miss Mayo on writing on an aspect of the Indian question which others always leave untouched. Prof Rushbrook Williams does not appear in his review to have guessed the sinister motive of the authoress in writing a book whose sole object is to lower India in the eye of the world. Very strange for one of his erudition and intellect but very natural also for other reasons. Miss Mayo's undemocratic spirit seems to have pleased Prof Rushbrook Williams. He says

Did Miss Mayo really meet no kind hearted decent loving husbands and fathers in India?

Then there is a general valuation of Miss Mayo's original 'discoveries' and great insight into Indian thought and feeling.

In a book announced as totally unlike any other book on India one would not expect to come across that hackneyed statement of the hypothetical

the old style of thought, and follow science and material forces

Reading a few sections of Mr Chen's *Hien Tsun* (Collected Essays) the spirit of the man is soon discovered. For example, in his essay 'The Destruction of Idols'

May I ask why we should destroy the idols? There are many persons and things that are useless, but are venerated just like idols. A thing which is useless even though it receives honor should be destroyed. * * * All the gods and devils in heaven and earth cannot be proved to be real. These pretenses in religion are like the idols which deceive men. The term *amita Buddha* or the word 'Jehovah' or the term 'Emperor of Heaven' may deceive people. All the spirits which the theologians worship are useless idols which should be broken. In the ancient days folks were ignorant and believed that a king was the Son of Heaven. They worshiped and honored him believing that his power was greater than any one in his country. The idea of divinity permitted the king to reign. As a matter of fact, kings and emperors are all idols. They cannot work miracles they depend entirely on the people. The Emperor P'u in China and Emperor Nicholas in Russia are more pitiful than the ordinary citizens today because they have lost their kingdoms. These emperors, like the idols of clay and wood have been destroyed and thrown into the rubbish heap.

Speaking also of the idols of the nation, family and ethics Mr Chen ends thus:

"Destruction! Destroy the idols! Destroy false idols. Our faith should take the standard of real truth. The vain traditional glory of religion, politics, and morality are all idols which ought to be destroyed. The reality of the universe and our own faith can never combine if these idols are not swept away."

Writing on 'The Revolution of Literature' Mr Chen says:

"Three principles may be written on the banner of our revolution: first, to overthrow the ornate, flattering noble literature, and create the simple, lyrical people's literature; second, to overthrow the antiquated extravagant, classical literature and create a new truthful, realistic literature; third, to overthrow the complex difficult and scenic literature and create the simple, ordinary social literature. * * * European civilization is not only gifted with politics and science but also has great literature. I love Rousseau, Zola, Kant, Bacon, Darwin and many I cannot here mention. Is any one in China as great as one of these men? If there is any one who will disregard his own honor and reputation to join in the fight against the eighteen devils (the classical scholars who oppose the progress and reform in literature) I will drag the biggest cannon and be a forerunner in the fight against these enemies."

In the recent *Controversy Between Science and Philosophy of Life* Mr Chen championed science and attacked metaphysics. He states in his preface to the collected essays which make up this controversy that science is more fundamental than metaphysics.

Comte divided the progress of human society into three periods: we are still in the period of religious superstition. Do not the great majority of our people still believe in witches, fortune telling

and foolish things? Among the educated class there are many who believe in metaphysics.

In another short essay Mr Chen says: "Some one has made the remark that China needs three forces—the Russian spirit, German science and American capital. I think we do not need American money but do need to combine the Russian spirit and German science. At present, people welcome American wealth but they are indifferent to German science, and their greatest terror is the Russian spirit."

Wu Chih hui

Along with Chen Tu shu goes Wu Chih hui, author, materialist and radical. Mr Wu, who is now also among the older generation, has become one of the boldest of reformers. He is an anarchist, a revolutionist, who has suffered exile for his beliefs but a teacher and warm hearted democrat who is respected for his character and earnest life. This touch of autobiography is found in his representative essays:

WU CHIH HUI'S CAREER

I am now sixty years old when the Emperor of Japan determined to reform his empire. I was then young. From that year I began to learn Chinese characters to memorize the *Four Books* and the *Five Classics* and stuff my memory with the famous essays. When twenty I became interested in critical study of the classics, and a great admirer of the Han Dynasty scholars. I had an ambition to write critical studies and felt exceedingly proud to have the opportunity to study these noble works of our Middle-Flowery kingdom. At that time I wrote inflammatory articles to denounce the foreign church and instigated people to burn these churches. I refuted republicanism by quoting the classics, and argued that a great empire must have a king. * * * When I was thirty I came to Peking for the examinations, but failed. I lived at that time with a successful candidate Wang Ying men. One day Chang Chien came to my place to talk with Mr Wang. Chang Chien was a student of the Premier Wong Tasing ho and agreed with the scholars of the time that they should help the Premier to fight the dwarfish Japanese. A few months later the emperor issued an edict and ordered me to give the enemies a decisive blow. Every one thought that the three islands of Japan would be crushed in a few days. But the war news became more and more disappointing. Four months later a General who was responsible for the loss of the frontier of Manchuria was beheaded. Then Kang Yu Wei presented his famous memorial to the Emperor and Liang Chi chao published lists of 'foreign books for the students of China.' At this time I followed these great men and tried to play a humble part. But how disappointing it is that after thirty years have passed our education is still ornamental, our industry is still undeveloped, the reforms are but changed signboards! And now people are taking Chinese curios, classical criticism and so forth as the spiritual civilization of the East, digging up rubbish from the past to eat as 'divine ambrosia.' And today I am still obliged to write articles such as Liang Chi chao wrote thirty years ago! Ah you sick man of the East, your sickness has really become incurable.

Mr Wu has been an outspoken opponent of Tagore, and during the Indian poet's visit to

Calcutta's Drink Problem

Selling Human flesh

The following extracts are from *Abkari*
During the twelve months April 1925 to March
1926, citizens of Calcutta including Howrah
drank in round figures—

250,000 bulk gallons of country liquor
140,000 bulk gallons of imported foreign spirits
31,000 bulk gallons of wine
300,000 bulk gallons of beer
4,000 bulk gallons of medicated wines.

A total of seven and a-quarter lakhs bulk gallons
of alcoholic liquor. There are no figures for tari
The tari vendors are not required to maintain
accounts of sales. But it has been computed that
40,000 maunds of tari were sold in the same period.

Bengal is falling back in the race for
prohibition says the Rev. Herbert Anderson,
whose speech before the Rotary club is re-
produced in *Abkari*.

The Japan Weekly Chronicle publishes the
following in the course of a criticism of
Japan's system of making virtual slaves of
Geishas and girl workers generally. We read:

Past experience and recent revelations show
that the girls practically become the slaves of the
masters of the houses and can be sold from one
house to another as slaves were sold from one
master to another in America in the times of the
slave trade. The arrangement is that the purchaser
of the girl pays so much down to her parents for
the use of her body. The girl is supposed to be a
willing agent in such transactions, but in view of
the stress laid on filial piety and the strength of
public opinion, the only alternative to meeting the
greed or need of her parents is suicide. She is
therefore only a willing agent to this extent. The
law against the sale of human flesh is overcome

by the pretence that the master of the house provides her with a room for the reception of guests and that the money that she makes goes to pay for her keep and her clothes for the provision of which the original loan was contracted. A girl who once finds her way into these houses very seldom makes her escape as long as she is of value to her master whether for his own house or for sale to another. Legally there are means whereby she can be freed but they are so complicated and require so much strength of character on the part of the girls surrounded as they are by wishes that they are virtually a dead letter. The girls are only flung out when they are diseased and worthless with the flower of their youth gone. The system is so far officially recognised that the police are prepared to protect the owners of the houses against any loss that they may suffer from the attempts of the girls to run away. In a recent case some girls who found their way in Tokyo were arrested by the metropolitan police as they stepped from the train and were sent back to servitude. The metropolitan police disclaimed any responsibility since they only acted on instructions from the police of the town where the girls had come from but their action plainly indicates that if they regard the girls as the property of their master who had applied to the local police for their return. If there had been anything illegal in the matter the master of the house would not have gone to the police to demand that his property should be returned to him nor would the police have been so prompt in responding to his request.

This sale of human flesh is not confined to the licensed quarters. There are other quarters where women are regarded as mere chattels which can be bought and sold. The girls who sell themselves to the mills experience a better fate than their unhappy sisters. It is to be hoped although many tales are told of their hardships and of the disease which lies in the train of these hardships. Here again there is a trade in human flesh. The girls sell their services in order to relieve their parents and thus bind themselves down to a state of servitude for a number of years. The mill owners always protest that they are willing workers but guard them with a strictness which seems to show that they are not. In the event of any trouble in the mill they can be locked into the dormitories by the owners, much as if they were their property and it is very exceptional that they should be turned out of the dormitories as happened in a recent strike, where the masters knowing that the girls had nowhere to go to, resorted to this end in order to break the strike. Times are bad now and the owners no doubt thought that they could dispense with the girls' services. In other directions there is also traffic in human flesh. Girls are sold to cheap eating-houses where they become the property of the owner who can pass them on to other houses when he is in need of money or even dispose of them to the brothels. Here again there seems no chance for the escape of the girl once it has got into the net. The men into whose hands she has fallen are violent characters who would think nothing of killing her rather than let her escape. And the law seems powerless to protect her against the passions of evil men. Rather the administrators of the law seem to be

against her. Public feeling also seems to be against her. The debt is regarded as a matter of honour which has to be repaid, and if it cannot be repaid the girl has to suffer. Even where the master of the girl has cheated her as he always does and got his money back many times over, still the original money has to be repaid. And when the original money is forthcoming the girl runs a great risk if she is worth keeping of being forcibly restrained and bullied into refusing to accept assistance.

This practice of dealing in women's flesh whether it be for prostitutes, *keisha*, mill girls or waitresses goes on all over the country and is a reproach against the nation. It is stated that an Imperial Ordinance was issued in the early days forbidding the practice but old established practice has triumphed even over an Imperial Ordinance. Whether the law could be revised to prevent it is a matter for lawyers to decide. We cannot prevent people entering into contracts for the sale of their services. This is a practice common in all countries and is to some extent a safeguard for the worker. But the peculiarity in Japan is that it is only the women workers who have such contracts. The men workers are liable to be dismissed at any time. This raises the question whether it would be possible to forbid contracts which provide for an advance of the wages paid. To appeal to the moral sense of parents who sell their daughters means little rebel for the present situation. The law must be appealed to for present relief and the only way to do this seems to be to make any advance on wages at the time of engagement illegal.

Lord Olivier on Indian Reforms

The Right Honourable Lord Olivier of Ramsden, P. C., K. C. M. G., C. B., former Secretary of State for India, writes on the Indian Reform Question in the *Review of Nations*, Geneva. He says at one place

It is presumed that the Commission to be appointed not later than 1929 is to judge whether Indians have shown themselves capable of being entrusted with further responsibilities or deserving of that indulgence by amiable and responsive co-operation with the Government in working the Diarchical constitution. The presumption is offensive and exasperating to self-respecting reformers. Mr. Ramsay MacDonald and other responsible Labour Party sympathisers with the Indian Nationalist Movement, have never minced words in criticising the futile political tactics of the Swarajist Party in their attitude towards the constitution but those tactics form no demonstration of incapacity for public administration which is a different thing from political tactics. And although we should have advised public-spirited Indians to make the best of a bad job by entering and taking office in the Councils unquestionably their doing so would have often placed them in most unsatisfactory and humiliating positions to which they might well say it was not worth their while to expose themselves. For the central fact about the Diarchical system is that an elected

College Calcutta has this year received her Master's Degree from Wellesley College, Wellesley Massachusetts, one of the finest institutions of learning for women in America. She is one of the most brilliant of students her high scholastic attainments throughout her college career have been a credit to her country. Her amiable and sweet disposition and proverbial eastern modesty combined with a certain western aggressiveness, writes Mr Siva Tosh Gupta have helped her fellow students to realize that Indian girls are equal nay often superior to their western sisters in intellectual qualities and human attributes which constitute the making of the best type of women. Having received her Master's Degree in Economics and Sociology last June Miss Ghose is planning to spend the winter

at Columbia University New York City where she will take courses in Psychology and Pedagogy work that will fit her to be of even greater usefulness to the cause of woman's education in India when she returns home. This summer Miss Ghose is spending most of her time in visiting social welfare organizations of New York City and gathering

information. She is also keen about factory labor. Miss Ghose has not only evoked popular sentiments among her friends for Indian girls but she has aroused the sympathy of American educationalists in the problem of the Indian woman's education. She has been instrumental in securing a donation of \$1000 from Wellesley College for the Maharam Girl High School at Darjeeling of which she is a matriculate.

SRIMATI SUGRASI DEVI daughter of Srijut Bahadur Chandra Dutt of Tipperah (Bengal) has it is reported achieved the distinction of being the first lady science graduate from the Bethune College Calcutta. She passed the last BSc examination of the Calcutta University with distinction and has taken up Botany in her M Sc course at the University College of Science. Sreemati Sugrasi became a widow shortly after her marriage at the age of 17.

She is the first lady graduate of Trivandrum to go in for the law degree.

The academic distinction of Miss JAMULA MARY SIRAJUD DIN daughter of Prof R. Sirajud Din of Lahore Forman Christian College deserves special mention in this connection.

Mrs. G Linn Ure

(Photo sent by L N A)

Miss Sirajud Din proceeded to England after taking her B.A. degree of the Punjab University. There she received the diploma of Technical Education (Dip Tech) from the London University and was subsequently admitted to the Ph D degree of the University of Edinburgh. At present she has been visiting Domestic Science Institutions in France, Germany and Switzerland. She has been appointed as Industrial Instructress for women by the Government of the Punjab.

In British India Indian ladies are not considered fit for holding responsible administrative offices. But a progressive Indian state has led the way in this direction by appointing a qualified Indian lady in the political department. We learn that the Maharajah Thakore Shambhob of Gondal has appointed SRIMATI JANABAI DEVI SINGH RATHOD B.A. as his Political Secretary.

This month we have received the news of the appointment of some ladies on the Municipal boards in different provinces. Mrs.

itself where (just before the interview) the leading members of the Indian community had told me that 90 per cent were men living without their families I had in mind other parts of Africa also which I had recently visited where the proportion was very nearly as excessive. It is true my words referred to certain features in the Transvaal as well but not so immediately.

In my apology I very gladly accepted the fact (pointed out to me) that in the Transvaal there had been a great improvement in this proportion of men to women in recent years. Further I stated that I had used the word demoralisation in the interview in a general sense as referring to the deterioration which inevitably takes place in habits of life when large groups of men live for a long period in a foreign land without the amenities of the family.

Since the matter has been brought to the notice of the press in this country I would ask leave to make my own position clear. During the past thirteen years, in every possible way I have been endeavouring to expose the wrong done to humanity whenever either by a system—such as that of Government indentured labour to the Government recruited labour to Malaya—or by private individual recruiting unregulated, the family life is not upheld as sacred. On the whole public opinion and Government opinion also has not been slow to recognise this wrong when once it has been pointed out. As far as I am aware I have never made any distinction either in my own mind or in the press as to the persons or races among whom this principle of the family life (in emigration) was in danger of being infringed. For instance I have often written and spoken very strongly of the wrong done in the tea plantations of Assam when young Englishmen are induced to come out from England on salaries which do not enable them to live a proper family life. I have also written to the English newspapers in England about the same evil in North Rhodesia and Malaya. Furthermore I have referred to the evil which has ensued in Malaya and Singapore with regard to a form of Chinese immigration which (up to quite a recent date) was destructive of the family life.

Every time that I have gone over to Africa, I have tried to encourage the family life among the white residents there is traders. Whenever the family life has been encouraged as among the Ismailia Community all along the coast the Arya Samaj members in Nairobi, the Goanese Community at Lorenzo Marques, the Parsee Community and others, the effect has been immediately to enhance the idea of Indian national dignity and respect. For nothing is more beautiful to witness than the love of Indian fathers for their children and their homes and this continually wins a true appreciation from those who are only too ready to criticise the Indian Community otherwise. I have lived in such Indian homes, and know the pure joy of it. I have also lived in homes where there are no other and children to give me their unspeakably precious welcome and I have noted the difference.

It is true (and it is one of the best answers to Miss Mason's book) that Indians have shown in Tropical Africa remarkable powers of self-restraint while living under these less fortunate conditions. It may be remembered that I collected

irresistible evidence on this point, especially in Uganda to rebut the charges of Lord Delamere, Major Grogan and others, which were published in the Economic Commission Report of 1919. But such self-restraint must not be counted on to last for all time so as never at any point to break down. We surely ought not to put such a strain on average human nature. Besides, there is an inevitable deterioration that takes place and this prevents the best features of Indian civilisation from being brought into evidence.

If I am asked finally whether I would say exactly the same things about Englishmen in India I would unhesitatingly say 'Yes.' It is a principle of humanity for which I am struggling and pleading.

P. S. I note in 'Young India' of October 6th, 1927 that Mahatma Gandhi has recently made the same appeal to the Chetty traders in Tamil Nadu to take their families with them when they go out to Malaya and Singapore.

Lord Bishop of Natal on Indian Question

Indian Opinion, Natal writes

We are deeply grateful to His Lordship the Bishop of Natal for the righteous lead he has given on the Indian question in his Charge to the clergy and the laity at the recent Diocesan Synod at Maritzburg: an extract from which we publish elsewhere. He put the finger on the spot when he said in the words of the Rev C. F. Andrews that the Indian in South Africa suffered from the inferiority complex, the constant reminder that they were despised and counted of no account by those of another race with whom they were brought in close contact everyday. No greater wrong can be done to a people than the destruction of its self-respect. Any other wrong is easier of repair than this, the loss of self-respect. It destroys all the finer and ennobling qualities of the people, their righteous ambition, self-help, public spirit and clean living, and inevitably degrades them. If the Indians in South Africa have not sunk very low it was not because there was anything in their surroundings that discouraged it but because of the traditions of their own ancient civilisation. Only the other day the *Natal Mercury* which seems to have made a speciality of creating and maintaining an atmosphere of hostility towards the Indian community gave prominence to the complaint of a European that an Indian who was occupying the front seat among the three back seats allotted to non-European passengers on the Durban train and was, therefore, well within his rights, did not to all humility vacate his seat in favour of the standing European passenger and retreat to a seat more to the rear. And the European correspondent accused the Indian of 'insolent pride.' This is a typical instance of the way the self-respect of the Indian is being attacked, and it also indicates that the Indian has resisted the attack.

Impressions of Kenya

Mr R D Harve writes in the *Democrat* his impressions of Kenya, which will interest all who desire to know about the conditions prevailing in that Colony. He writes:

The first thing that strikes the visitors to Kenya is that wherever Indians exist in sufficient numbers, they cannot help being sectarian. It is part of their nature. In Nairobi the capital for instance there is not a single club or other institution where all Indians can meet but there is a Cutchi Gujarathi Union, a Patel Brotherhood, a Goan Institute, an Indian Christian (non-Goan) Union, a Panjehias Club, and there are besides Punjabi Hindus, either followers of the Sanatan Dharma or the Arya Samaj, these latter being in two camps, vegetarians and meat-eaters. The railway administration has provided three separate Railway Institutes, Indian, Goan and European. Some of these institutions admit a limited number of outsiders as a concession but without full rights. It is perhaps natural to form groups according to languages but any further subdivision seems very undesirable. Even the elections to the Municipality are contested on religious grounds. I have not heard of any religious giving special training in Municipal administration and it is alleged to introduce it everywhere. Apart from this however the relations of different sections of Indians between themselves and with Goans seem to be cordial enough. But why should it be necessary to speak of different sections at all?

The relations between Indians and Europeans in Kenya are however anything but cordial. The Europeans, principally British settlers (official and commercial employees) try their best as usual to behave as if they were supermen, the official class being perhaps the least ill-disposed towards Indians. One is surprised to find all kinds of things reserved for Europeans. Not only are railway compartments so reserved, but cafes, restaurants, hotels, hair-cutting saloons, theatres, even rickshaws are there by the back door only. There is a doctor who will not go out at night except for European patients, though of course he does not announce this. In a European shop an Indian customer will never be attended to if there is a European customer in the shop, and the Indian has not the spirit to retaliate in Indian shops. He is out to make money and keeps his dignity aside if he has any.

In fact, the principal reason why the Indian in Kenya is disliked so much by the European is that he carries his low standard of living with him wherever he goes, and this enables him to undersell the European.

Even rich Indians will crowd together in mean, tiny tenements. If they build houses at all it will be for rent, not for residence. The Indian does not go out to settle there. He wants to make his

pile and return to his native place. The result has been that while European settlers and even Goans acquired vast properties when land was to be had almost for the asking the Indian did not care to take it. What is the use of land in a country where you do not want to live? And if you want to return to your country the sooner you can do it the better. So expenditure must be reduced to a minimum and we find even the richest Indians taking the cheapest seats at a cinema, the only one by the way which admits non-Europeans, and the only place where other people can sit by the side of Europeans.

Of course a few exceptional Indians like Mr Phadke, Bar at Law, member of the executive Council may be admitted anywhere even in European hotels because, in a small place, he is known to everybody but that only proves the rule. Indians are there in sufferance but they are in a way indispensable. Attempts have been made to get on without them in the Railway, the Post office and elsewhere. But it has always been found that when Indians are not there, the administration becomes more expensive and less efficient. The Indians who had been sent away from these services had actually to be taken back. One notable instance of this attempt to do without Indians is a War Memorial which was ostensibly erected by Africans and Europeans only. This show is said to have cost about three times the amount it should have if Indians had not been excluded from taking any visible part in it. And the same thing happened everywhere. But the Indians who were taken back into the services went back on smaller pay. The supply of Indians being unlimited they have to make themselves cheap. Every fortnightly steamer carries a fresh lot of Indians looking for jobs. All except first class accommodation on these steamers is booked for months ahead and the labour market there is being rapidly overcrowded. At present Indian employees are making a fairly decent living but the future is not at all bright for the mere service-seeker.

Politically Indians in Nairobi secured a great triumph in being able to prevent the reservation of the better areas for European residence. I am told they went so far as to refuse to pay taxes and even went to prison and ultimately the European community had to yield. At present, theoretically at any rate, there is no European Residential Area in Nairobi, as became clear the other day when the Government approved of a plot to the midst of the disputed area for the proposed Indian Hospital. The European community made a row and sent a big petition to stop it and the matter is still undecided but the principle is proved. Indians can and some do buy or build bungalows in that area, but the state of feeling may be judged by the fact that when an Indian does occupy a bungalow near a European the European will vacate it and make room for another Indian.

TO SIAM

(Translated from the Original Bengali)

When the thunder-voiced Prayer of the Three Refuges
rang from sky to sky across deserts and hills and distant shores,
the awakened countries poured their rejoicings
in great deeds, and noble temples,
in the rapture of self-dedication,
in mighty words,
in the breaking of the bond of self

At an unheeded, unconscious moment,
that prayer, wafted by some sudden wandering breeze,
touched thy heart, O Siam, lived in thy life
and shaded it with a branching wealth of well-being

A centre to thy revolving centuries,
an end to thy endeavours, which is Freedom of Spirit,—
it helped to bind thy people in a common bond of hope,
to strengthen them with the power of a single-pointed devotion
to one Dharma, one Sangha, and one immortal Teacher.

Let those words, potent with an inexhaustible creative urge,
ever direct thee to the adventures of new ages,
light up new truths with their own radiant meaning,
and in one single garland string all the gems of knowledge,
newly gathered

I come to-day to the living temple that is one with thee,—
to thy altar of united hearts
in which is seated on his lotus-seat Lord Buddha,
whose silence is peace, whose voice consolation

I come from a land where the Master's words
lie dumb in desultory ruins, in the desolate dust,
where oblivious ages smudged the meaning of the letters
written on the pages of pillared stones,
the records of a triumphant devotion

I come, a pilgrim, at thy gate, O Siam,
to offer my verse to the endless glory of India
sheltered in thy home, away from her own deserted shrine,
to bathe in the living stream that flows in thy heart,
whose water descends from the snowy height of a sacred time
on which arose, from the deep of my country's being,
the Sun of Love and Righteousness

NOTES

Constitutions for India

We have shown more than once in this Review that in federal constitutions where there are two legislative chambers the upper house generally consists of an equal number of representatives from each state or province of the federated commonwealth and the lower house consists of members of members returned by the provinces or states according to their population. We have also shown that in the constitution which India has at present, neither in the Council of State nor in the Legislative Assembly have the principles indicated above been followed.

We have been repeatedly dealing with this topic, because for the welfare and contentment of India and the provinces, it is necessary that the inhabitants of all the provinces should enjoy the honour privilege and right of serving the whole country and their respective provinces according to their numbers which they do not do under the present constitution. If it be thought undesirable or impracticable at present to assign to each province a number of representatives in the lower house proportionate to its population then the spread of education in it, or even the total revenues collected in it may be made the basis of representation. What we contend is that some consistent and easily comprehensible principle or principles should be followed in assigning the number of members to each province. We have shown that this has not been done.

And in consequence the inhabitants of the more populous provinces are represented inadequately and count comparatively for less as citizens. Such a state of things cannot be good for the country.

There are at present two draft constitutions before the country. One is to be found in the Commonwealth of India Bill presented by Mr Rennie Smith and ordered by the House of Commons to be printed 11 February 1927. It has been approved in substance by the Indian National Convention, and is popularly known as Dr Annie Besant's Bill. The other is the draft constitution for India which a number of members of the Independent Labour Party have prepared in consultation with Indian friends, and which was

sent some time ago by Mr A Fenner Brockway to some Indian publicists for their advice and opinion.

Besides these two, the Congress party, it is said are preparing a constitution. It is not known whether the persons entrusted with the task have finished it.

Representation in Dr Annie Besant's Bill

Clause 11 of Dr Besant's Bill states that "The Legislative Power of the Commonwealth [of India] shall be vested in a Parliament which shall consist of the King, a Senate and a Legislative Assembly herein called the Parliament."

In the fourth schedule of this Bill it is stated that the number of members assigned in the Provinces for the various legislative bodies shall be as follows—

Province	Senate	Legislative Assembly
Assam	8	Assam 16
Bengal	20	Bengal 40
Bihar and Orissa	20	Bihar and Orissa 40
Bombay	20	Bombay 40
Burma	16	Burma 32
Central Provinces	10	Central Provinces 20
Madras	20	Madras 40
Punjab	16	Punjab 32
United Provinces	20	United Provinces 40

It is not clear on what basis or principle the number of members has been assigned to the provinces in the two legislative chambers of "Parliament." The principle followed in the United States of America, which is the most powerful federated commonwealth in the world, is to be found in the following extract from the eleventh edition of the *Encyclopædia Britannica*:

In 1787 all the states but three had bicameral legislatures—it was therefore natural that the new national government should follow this example not to add that the division into two branches seems calculated to reduce the chances of reckless haste and to increase the chances of fading wisdom in a multitude of counsellors. There was, however another reason. Much controversy had raged over the conflicting principles of the equal representation of states and of representation on the basis of numbers the larger states advocating the latter the smaller states the former principle and those who made themselves champions of the rights of the states professed to dread the tyrannical power which an

Assembly representing population might exert. The adoption of a bicameral system made it possible to give due recognition to both principles. One house the Senate contains the representatives of the states every state sending two the other, the House of Representatives contains members elected on a basis of population. The two taken together are called Congress and form the national legislature of the United States.

In Dr Besant's Bill, the Indian Senate, unlike the U S Senate, does not contain an equal number of representatives from the provinces nor has the number been assigned according to population. The Legislative Assembly too has not been constituted according any consistent principle that we can make out. The following table shows the population of the provinces and the number of representatives assigned to them in the Besant Bill —

Province	Population	Senate	Legislative Assembly
Assam	7,606,230	8	16
Bengal	48,691,361	20	40
Bihar & Orissa	34,002,189	20	40
Bombay	19,348,219	20	40
Burma	13,712,192	16	32
Central Provinces	13,912,760	16	32
Madras	42,318,994	20	40
Punjab	20,680,024	16	32
United Provinces	41,375,787	20	40

The table makes it clear that the basis of population has not been followed in the representation given to the provinces in the Senate and the Legislative Assembly.

Moreover, the minority of the population of British India, inhabiting Assam, Bihar and Orissa, Bombay, Burma, Central Provinces and the Punjab has been given a far larger number of representatives than the majority, inhabiting Bengal, the United Provinces and Madras, as the following two tables will show —

THE MAJORITY

Province	Population	Senate	Legislative Assembly
Madras	12,718,995	20	40
U.P.	45,477,787	20	40
Bengal	16,691,536	20	40
Total	134,390,308	60	120

THE MINORITY

Province	Population	Senate	L.A.
Assam	7,606,230	8	16
Bihar and Orissa	34,002,189	20	40
Bombay	19,348,219	20	40
Burma	13,712,192	16	32
Central Provinces	13,912,760	16	32
Punjab	20,680,024	16	32
Total	108,766,614	96	192

It is clear from the two tables that in both

the Senate and the Legislative Assembly Dr Besant's Bill gives the minority of the inhabitants of British India 50 per cent. more representatives than the majority. In India's present constitution the group of provinces containing the minority of the inhabitants of British India have 18 per cent. more Indian elected representatives in the Legislative Assembly than the group containing the majority. Therefore the Besant Bill discriminates far more against the majority than the present constitution. In the United States of America the framers of the constitution tried to counteract the tyrannical power of the majority. In India both the bureaucratic and the pro-people framers of constitutions have invested the minority with preponderant power. What is the reason?

From the statistical publications of the Government of India, it is not possible to state accurately how much revenue is collected in each province. For this reason we are unable to prove what is a fact, *viz.*, that neither in the present constitution of India nor in that contained in the Commonwealth of India Bill have the total revenue collections in each province been made the basis of representation. What can be demonstrated is that the basis of the number of literates in each province has not been followed. In previous issues we have shown that this basis has not been followed in India's present constitution. The following table proves our statement as regards the Besant Bill —

Province	Literates	Literates in English	Senate	Legislative Assembly
Assam	483,105	70,809	8	16
Bengal	1,254,601	773,161	20	40
Bihar & Orissa	1,586,457	1,132,062	20	40
Bombay	1,615,533	276,333	20	40
Burma	3,602,043	113,413	16	32
Central Provinces	633,293	62,736	16	32
Madras	3,621,908	398,883	20	40
Punjab	833,492	139,535	16	32
United Provinces	1,688,872	175,239	20	40

Representation in the I. L. P. Bill

Though the Independent Labour Party as a whole is not responsible for the Bill sent to some publicists in India by Mr A. Fenner Brockway, we have called it the I. L. P. Bill for brevity's sake. In this Bill, too, neither in the Senate nor in the Legislative Assembly has either the basis of total

agricultural schools etc. to turn out skilled artisans who will grow up to be master workmen. These should properly speaking be post-middle continuation schools and should devote some part of the working time to general education. (3) Type 3 prevocational training or vocational bias added as a subsidiary and correlated element to liberal education in high schools—to train students who after leaving school may desire to enter on a calling in life in the first instance as apprentices (more or less) in the vocations or callings concerned or to continue their vocational preparation in polytechnics, or commercial or sub-professional schools or in the technology departments of a university. (4) Type 4 mainly vocational, with instruction in applied science in technical institutes or engineering or medical commercial or other sub-professional schools or colleges outside a university—to turn out foremen sub-oversers such as assistant surgeons sanitary inspectors clerks and lower grade accountants etc. (5) Type 5 a mixed liberal and technological type such as diploma courses in technology or commerce in the intermediate and post intermediate stages of a university followed by workshop or farm training for a number of smaller chemical or other scientific industries (agricultural or manufacturing) or for subjects like commerce, teaching etc. This type will turn out men who will run small industrial or business concerns on a proprietary basis or be oversers and supervisors in mills farms or factories and will be eventually fitted to be entrepreneurs and captains of industry. (6) Type 6 technological or professional—of the university graduate or post graduate stage—to turn out men for the learned professions or advisers or scientific experts in mills and factories or superintendents of Government farms and workshops researchers etc.

Dr Seal concluded by observing

I have in every case characterised both the type of training the level of efficiency and the place in the social economy kept in view but these various grades are to be considered not as unconnected with or independent of one another they are mutually filiated as grades of one continuous and integrated national system of educational organisation at once cultural and vocational, and it will be a main object of that organisation when it is ready to devise easy lines of transition from one stage to the next higher one by means of tutorial classes summer schools evening classes one-year classes, or adult schools with the help of University Extension Movements, Workers' Educational Associations Trade Unions Educational Settlements Social Survey Groups and similar other voluntary associations that spring up in modern progressive society.

This scheme which Dr Seal had outlined in his Bombay Convocation Address also, should engage the attention of the holders of the education portfolios of the Governments of India and the Provincial Governments and of those in charge of education in the Indian States.

The Revival of Hinduism

The prescribed formula for the revival

of Hinduism is Shuddhi, Sangathan and the removal of untouchability. In the Punjab Bhai Parmanand has started the Hindu Samyavad or Hindu Equality movement, which is more thorough going and aims at the abolition of all distinctions of caste. Even in Modern India, this is an old idea, on which part of the social reform activities of the Brahmo Samaj is based. The Brahmo Samaj also advocates the worship of one God, instead of the worship of many gods and goddesses. The Arya Samaj, too, advocates the worship of one Supreme Being, adding to it a belief in Vedic infallibility and retaining the Hindu ceremony of *homa*. Some years ago Mahatma Gandhi declared that he was not a worshipper of images or idols which did not rouse the feeling of reverence in his mind. He also published in *Young India* verses from Hindu Shastras in support of monotheistic worship, compiled for him by Principal Dhruva of Benares. He did this probably because he felt that the worship of one deity, in addition to being philosophically true and spiritually on a higher level than polytheism makes for national unity and strength. He has enjoined the abolition of the purdah, advocated the marriage of child widows and condemned child marriage. These are all points of contact with what the Brahmo Samaj has professed and practised. But he is a believer in Varnashram Dharma according to his own interpretation. These 'ideal' four castes, however, do not and cannot exist. On the whole, the religious and social principles for which the Brahmo Samaj stands have been boding favour with Indian leaders of various groups.

The League of Nations and "Weaker Nations"

The Leader opines —

In a world where the weaker nations do not often get justice against the stronger ones, where people of one nation live in constant dread of another where nations are groaning under the burden of armaments and other martial preparations the importance of an organization like the League cannot be over emphasized.

This is true. But we have to consider which are the weakest nations. Among the peoples of the world some are independent and some are in a state of subjection. A country which is in a state

of subjection, even if its area and population are large, is really weaker than small independent countries. We have shown in previous issues of this Review that the greater portion of the habitable surface of the earth and its inhabitants are under subjection to foreign peoples. It is these enslaved weak peoples who require to be protected against wrong and injustice and oppression at the hands of their masters more than the small and weak independent nations, who also undoubtedly require protection. But we are not aware that there is anything in the articles of the covenant of the League or in the constitution and rules of any League body which can give subject peoples any hope of redress. If anybody knows of such things we shall be glad to learn from him. Needless to say we are not referring to the so called mandated territories, whose population is not large and which possess the right of representation of grievances on paper.

Scindia Steam Navigation Co Ltd

The speech of the chairman of this Company, Mr Narottam Morarjee delivered at its recent 8th ordinary general meeting contains many interesting items of information. It has been adding to the number of steamers owned by it and also trying to man its boats with competent and qualified Indians. On this latter point Mr Morarjee said:

The policy of manning your steamers with officers and engineers recruited in India has been receiving the careful attention of your Directors. Last year out of the 63 officers and engineers employed on your seven steamers 30 were brought out from England and 33 were appointed in India. This year we have at present in our fleet 23 officers and engineers brought out from England and 41 selected from this country. We are trying to engage as far as possible, men in this country possessing the necessary qualifications.

With a view to encourage our countrymen to man our steamers as officers and engineers you will be glad to learn that, as indicated "by me in my speech last year six engineers were sent to England to enable them to undergo further training in the schools and marine workshops there for the purpose of qualifying for higher certificates of competency as engineers. We hope when they return to India duly qualified they will be able to fill higher posts in the steamers of the Company.

I told you last year that two of our apprentices who obtained their certificates of competency of the Board of Trade as second mate were appointed as junior officers on the steamers of the Company.

Two more apprentices will shortly be sitting for their examination as second mate. Seven more apprentices are undergoing their period of apprenticeship on our steamers. We have been receiving a number of applications from young lads from different parts of the country requesting us to take them as apprentices on our steamers. Owing to the limited number of our steamers we regret it is not possible for us to take them all on our boats. We however propose to increase the accommodation on some of our steamers for taking such apprentices and when all our three new steamers will be in commission we hope to increase the number of apprentices.

All the maritime provinces of India ought to help this Company with cargo as well as with officers to man its steamers. The young men of Bengal along with those of other maritime provinces should apply for apprenticeships. Those who can afford to go abroad should learn ship building, marine engineering etc. in foreign countries.

A Strange Coincidence

As an example of how presumably the minds of great persons think alike we offer the following instance of remarkable coincidence to our readers.

On page 67 of the recently published (1927) brochure on 'The Hox of Seraikella' by Anathnath Chatterjee M.B.B.S. and Tarak Chandra Das M.A., which forms Vol I (New Series) of the Anthropological Papers of the University of Calcutta, there occurs the following paragraph—

Judged by the head length, we find that the Hox are more variable than the Bavarian Aino and English and less variable than the French. Judged by the head breadth they are less variable than the Bavarian Aino, French and English. Accordingly it would appear that our series is quite comparable in homogeneity with any modern series.

On page 424, *Biometrika* Vol I 1901-1902 in her memoir on 'The Nagada crania' Miss Cecily D. Fawcett writes:

"Judged by length we see that for both sexes the Nagada series is less variable than Bavarian Aino French and English. Judged by breadth the Nagada are more variable than the Aino less than French and English and differ little from the Bavarian skulls. Accordingly it would appear that the Nagada series is quite comparable in homogeneity with any modern series.

Excepting for slight alterations, not only the language but even the different series compared in the two above quotations are strangely identical. As there is a gap of two and a half decades between the writings of Miss Fawcett and those of the

Indian authors we suppose we cannot ascribe the coincidence to thought reading, but it undoubtedly furnishes a notable instance of the unity of the human mind independent of time and space.

How Bengal Is Handicapped

If the people of any area run the risk of getting beaten in the race for progress the fault to some extent is certainly theirs. But extraneous causes may to a great extent obstruct their march. It is our purpose to indicate in this note some of these extraneous causes so far as Bengal is concerned.

When the partition of Bengal effected by Lord Curzon was 'unsettled', it was done by means of a fresh partition. In the old administrative province of Bengal, in which Bihar, Orissa and Chota Nagpur were included, Hindus were in a majority. In partitioning this old province in the way Lord Curzon did, one of his objects was to give the Mussalmans a province in which they were to be in a majority. In the new partition by which the first one was undone that object remained fulfilled. But it is not any communal gains or losses to which we intend to draw attention in this note. By the new partition Bihar and Orissa were separated from Bengal. Bengal has not objected and cannot object to this, because Bihar and Orissa have a perfect right to be independent provinces. What is objectionable in the new partition is that some regions which have all along formed parts of the linguistic and geographical province of Bengal were separated from it, such as the district of Manbhum, parts of the Satal Parganas, etc. These include some of the richest mining areas. They are healthy, too, and comparatively sparsely populated. For these reasons they afforded room for expansion for Bengal in various senses. Such expansion is more difficult now than if these areas remained parts of the administrative province of Bengal. The problems of ill health and unemployment are very acute in Bengal. These separated Bengali-speaking areas could have provided some means of solving these problems to a greater extent than now, if they had not been severed from Bengal.

Bengal is one of the unhealthiest regions of India, as Dr Bentley's latest report shows.

But though the most populous and the richest source of revenue, Bengal of all the major provinces gets the smallest allotment of revenues for her provincial requirements. So there is little money available for improving the sanitary condition of Bengal, as well as for adequate medical relief.

A good many districts of Bengal could produce plenty of crops of various kinds, if there were irrigation works there. But *there are no productive irrigation works in Bengal!* This is the case with Bihar and Orissa and Chota Nagpur also, for the sin probably of having once formed part of the administrative province of Bengal.

The mileage of productive works in operation in the provinces is as follows —

Province	Main Canals and Branches	Distributories
Madras	4049	8903
Bombay	5605	744
United Provinces	1459	8805
Punjab	3438	19119
Burma	322	832
Central Provinces	211	846
N W F Province	88	200
Bengal	Nil	Nil
Bihar and Orissa	Nil	Nil

The mileage in operation of unproductive works is as follows —

Province	Main Canals and Branches	Distributories
Madras	751	705
Bombay	1898	1106
Bengal	60	254
U P	428	1362
Punjab	160	152
Burma	Nil	Nil
Bihar and Orissa	764	2752
Central Provinces	69	1402
N W F Province	141	346
Baluchistan	8	71

The absence of irrigation works is one reason why agriculture cannot make adequate progress in Bengal. The jute duty brings annually to the coffers of Government some 37½ lakhs of rupees. If Bengal were not robbed of this amount, both her sanitation and agriculture could improve to some extent.

Owing to the allotment of totally inadequate revenues to Bengal her Government cannot spend as much on education as it ought to. She is the most populous of all the provinces, but (in 1924-25) Government funds spent on recognised institutions amounted to Rs. 1,71,38,518 in Madras, Rs. 1,41,65, in

Bombay, Rs. 17228490 in the United Provinces and Rs. 1,33,62,962 in Bengal. The expenditure from fees however contributed by the scholars, was in the same year Rs. 84,32,991 in Madras Rs. 60,13,969 in Bombay, Rs. 42,14,354 in the United Provinces and Rs. 14,63,616 in Bengal. No people can make all the progress in education it is capable of without adequate State help. Bengal has not been getting this adequate help. She has made some progress mainly by self help. The reward for her thirst for knowledge has been inadequate State help.

It has been repeatedly shown in this Review how in Bengal along with some other provinces has been assigned a number of seats in the Legislative Assembly totally out of proportion to her population, extent of literacy and revenue yielding capacity. Intentionally or unintentionally this is one of the things which robs her of opportunities of doing good to India and herself. We have shown in a previous note how Dr. Besant's Bill and the I. L. P. Bill seek to perpetuate this injustice in an aggravated form.

The lawless law regulations and ordinances of the British Government have hit Bengal very hard. Large numbers of her sons have occasionally been sent to jail for the commission of technical political offences. Numbers have been deprived of their liberty for an indefinite period without trial of any sort and without even the formulation of any definite charges. One hundred and forty six of them continue to languish in jails or in unhealthy villages. They are kept in conditions which have resulted in some deaths, some cases of insanity, some cases of contraction of tuberculosis and other serious diseases and in a general breakdown of health.

It would have been a grievous wrong if the detention of these persons served to check only the political activities of Bengal. But it is a blow to other movements as well. It has always been observed that among these detenus there were some of the best young social workers and organisers of Bengal. For that reason it has always been believed that many of them if not all have been laid by the heels solely or mainly for their activities in connection with education, sanitation, rural economy etc. & by their internment or incarceration Bengal has been deprived of some excellent social workers. Nay more, the feeling has been produced that if any one shows great zeal and efficiency

in independent social work in the villages, he runs the risk of losing his liberty directly and perhaps his health and life, too, indirectly. Thus, on the one hand the State does not give sufficient money to Bengal for promoting sanitation, education, agricultural development etc., and, on the other, discourages truly independent private effort in these directions by its policy of depriving men of their liberty without trial and without formulation of definite charges.

What we have written above finds some support from the following paragraphs taken from *Forward* dated the 20th of October last.

Sri Himansu Kumar Bose who was recently released from internment at Debaganj (Jalpaiguri) was arrested under the Ordinance in October 1924. While in the Alipore Central Jail 1920 a very high police official (European) and Mr. Bhupendra Nath Chatterjee saw him in the jail. They discussed the nature of the allegations against him. The detenu repudiated all suggestions of complicity in criminal conspiracy.

European Police Official — I know you were not connected with any anarchist party or group. But you are more dangerous. We are not afraid of those who handle bombs and revolvers because they may be caught redhanded. You were founding aarams (social service institutions) in the villages, establishing libraries in the village areas and conducting national papers. You were a worker in the Ramkrishna Mission (a Religious and Social Reform and Service Mission founded by Swami Vivekananda so named after Ramkrishna Paramahansa). The Mission now has branch organisations throughout the country and devotes attention to flood and famine relief work and education of backward areas and classes. And you were injecting nationalism in and through that Association especially among the students and young men who come into touch with the Mission's work and organisation.

The European Police official went on — You were helping in spreading nationalist ideas among the masses and you realise it is difficult for us to check the growth of ideas among the masses.

And the official concluded with some emphasis — You are more dangerous.

The Rai Bahadur saw through the weakness of the European official's position and interposed — You were selling away copies of the book — *Kanaal* (a Bengali book by Maulai Roy of Prabatak Sangha, Chandernagore). Did you not?

Detenu — Yes I did but the book was not proscribed then. What was the harm in selling copies of a book the sale of which was not forbidden by any law, rule or regulation?

The above conversation between the detenu and the Police officials will give the readers an idea of the nature of the crime or guilt of the Bengal detenus. It confirms the public view that the police plots have been aimed at legitimate political and social work at open movements and against any organisation that would promote self help and patriotism. The detenu in question is a

near relation of S. Aswini Kumar Dutt of Barisal

Packing of the Calcutta University Syndicate ?

It has been alleged that under the present Vice Chancellor the Calcutta University Syndicate has been packed with Government servants. But what are the facts ?

From the Calendar for 1927 it appears that there are now only six Government servants as syndics, viz. the Director of Public Instruction, Principals Sterling Barnardo and Adityanath Mukherji, Khan Bahadur Ahsanullah and Mr Macdonald. But in 1916 there were nine officials, namely, the Director of Public Instruction, Principals Wordsworth, Satischandra, Vidyabhusan Calvert and Heaton, Mr Perke, Mr S. C. Mahalanobis, Dr U. N. Brahmachari and Mr J. N. Das Gupta, and in 1917 there were eight official Members, viz. the preceding nine with the exception of Mr Perke.

We think that even six officials in a body consisting of eighteen members is too large a dose of officialism. But for this proportion of officials the present Vice Chancellor is not responsible and those who could tolerate a larger proportion during the regime of some of his predecessors should not fall foul of him for the present smaller proportion.

The Vice Chancellor and Examinees

The story that the fate of 60 candidates whose cases deserved consideration was decided by the casting vote of the V. C. is not borne out by the Syndicate Minutes. It is easy for irresponsible anonymous writers to make these allegations. Neither the V. C. nor any other conscientious member of the Syndicate can refute these misrepresentations by publishing the speeches and votes at the Syndicate because Syndicate discussions are by law confidential. The object of the baseless canard is to prejudice ignorant unsuccessful candidates against the V. C. as their enemy. Every year the Syndicate draws a line beyond which grace marks are not to be given. The same old practice must have been followed this year. Those boys who were just below this border line will feel aggrieved. But this happens every year, and nothing new has been done by the new V. C.

One of the lies published against the V. C. is that out of communal partiality, he passed a number of Muhammadan candidates by giving them grace marks. Now, what are the facts ? A reference to the printed Minutes of the Syndicate (10th July, 1927) shows that the Principal of the Calcutta Madrasah wrote to the Syndicate pointing out certain irregularities in the Matriculation Urdu paper, and that the Syndicate resolved to accept the recommendation of the paper setter.

Similarly in I. A. Arabic, many questions were set from outside the Course through the paper setter being not informed of the exact names of the extracts set for 1927. When the mistake was pointed out by some lecturers and paper examiners, allowance was made for this mistake by order of the Syndicate. Is it argued that no justice should be done to a candidate if he happens to be a Moslem ? Where was the partiality of the V. C. ?

Fellows Appointed During Mr Sarkar's Vice Chancellorship

Vacancy	Successor
Amnul Islam Ofahomedan Govt. servant	A. S. M. Latif ur Rahaman
G. C. Bose Principal Bangabasi College	J. Choudhury Secretary Ripon College
Abanindranath Tagore Khair Professor	Dr. Jnanendranath Mukherji Khair Professor
Sir G. Ranin then puisne Judge	Justice B. B. Ghose puisne Judge
J. R. Barrow Inspector of Schools Presidency Div transferred to Dacca	Matiul Ahmad Chou dhury successor of Mr Barrow as Inspector of Schools Presidency Div
Ererton Smith I. E. S. Surendranath Mallick Vakil	R. N. Gilchrist, I. E. S. Charuchandra Biswas Vakil
Dr. P. B. B. University Lecturer	Dr. Sunit Kumar Chatterji University Lecturer
Dr. Meek Head of the Department of Physics (when first made a fellow) Presidency College	Prof. Benoykumar Sen Offg. I. E. S. & Head of the Department of History Presidency College
Justice Zahid R. Z. Suhrawardy Servant of Govt. of India	Abdul Ali M. A. servant of the Govt. of India
Dr. Heard Rai Bahadur Abinash chandra Bose University servant	Dr. Green Armitage Dr. Debendranathan Bose University Professor
Sir Kailas C. Bose Private doctor	Dr. Mridendral Mitra Private doctor
Dr. H. Stephen Professor S. C. College when first appointed	Dr. Ewan Professor S. C. College

All others have been reappointed without any change.

Under the Regulations, 45 per cent. of the nominated Fellows must be persons engaged in the teaching profession. School Inspecting Officers have always been counted as members of this class. Taking teachers ex teachers and only one Inspecting officer into our account the Senate in September 1927 had 78 nominated Fellows out of whom 53 (or 68 per cent) are teachers and not a bare 45 per cent.

The Registered graduates in December 1926 elected 3 Fellows (besides a doctor) and out of these 3 only one was a teacher namely, Mr Satschchandra Ghose of the Post graduate Department while veteran teachers like Dr Sisirkumar Mitra Dr Hemendrakumar Sen (both University professors) and Professor Bhagendranath Mitra were defeated at the election. Could Government have made a more unacademic selection?

Much has been made of the cessation of Justice Zahid Suhraward's Fellowship in January 1927. The University Calendars show that Mr Zahidur Rahim (Suhraward) passed the Entrance Examination from the Dacca Madrassa in 1881 declaring his age as 15 completed years. Therefore in 1927 he must have been above 61 years of age and must have retired from the High Court Bench under the age rules a year earlier unless the learned judge has 'corrected his age by a sworn affidavit'. He cared so little for the Senate that a search among the published Minutes of the University shows that in one whole year (1925) he attended only two meetings out of 17, and in 1926 from the beginning to September (the period for which the records are available) he did not attend a single meeting! It is futile to bear a mere name on the Senate list. It is not easy to understand a certain party's anxiety to have on the Senate Fellows who are habitually absent or cannot by reason of their distance be expected to attend. How can a busy touring officer like the Inspector of Schools, Dacca Division (Mr Barrow), attend meetings at Calcutta every month? His place is the Dacca University.

The Senate expects the advice and support of its members, if it is to decide properly the academic and administrative questions that are brought before it. A Fellowship is not a little of honour. A habitual absentee has no business to be a Fellow. His own sense of public duty ought to make him

resign when he cannot attend. Some examples may be given. In 1924 the Senate sat on 19 days out of which Dr Abanindranath Tagore attended only on 3. Probably the Artist never cared for a Fellowship and had sometimes to be dragged to the Senate House. Neither was he prosaic enough to resign. There may be others like him. Why make them Fellows at all and subject them to criticism? In 1925 Justice Subaward attended only 2 meetings out of 17 and in 1926 none in the first 8 months. Other examples may be given.

But there is a curious phenomenon — at the annual meeting of the Senate (end of January) when the Syndics and Faculty members are elected the habitual absentees flock or are dragged to the Senate to vote. So the old song is true after all.

There once was a black bird gay

A splendid fellow was he

And though he went out every day

He always came home to tea (to vote)

As an American sees India

The Rev R S Loring, an American gentleman visited India some months ago. An interview with him has been published in the *Milwaukee Journal* which we print below.

RETURNED PASTOR SAYS ENGLAND SMILES AT RELIGIOUS WARFARE

A Mohammedan kills a sacred cow in Bombay or Calcutta and the Hindu population rises in indignation. A religious war follows. Or perhaps a Hindu religious procession will pass a Mohammedan mosque, with banners flying and trumpets blaring. The Mohammedans are incensed for they will have no music in front of their mosques. Another internecine war Britain looks on with a smile of assurance, and knows that as long as this internal strife continues India is hers.

Such is the impression of India obtained by the Rev R S Loring in a four months study of that country.

India today with its 69,000,000 Mohammedans and 220,000,000 Hindus is a seething mass of resentment against British oppression according to the Rev Mr Loring interviewed in his apartment, filled with bronze gods of the Hindus and rugs on which Gandhi had pined the shuttle.

Tells of Promises

"I talked with many Indian lawyers and political leaders," he said "who expressed this antagonism to England because of her continued domination of that country after using thousands of native troops in the World War."

England mustered the troops at the muzzle of rifles, and never failed to fire when met with resistance. Promises of independence were made.

After the war these promises were forgotten and we are still under British rule. That is what they told me.

The speaker told of his interview with Gandhi the mahatma or 'Great Soul,' who once had half the Hindu world at his command but now is losing influence because he prefers hand weaving, to British manufacturing machinery. The Rev Mr Loring applied for an interview at the unpretentious home of Gandhi in Ahmedabad. He was informed by a secretary that the great man was on a vow of silence which meant that he could not speak till it was over. A card was sent in and the Rev Mr Loring was admitted the next day when the vow ended at 3 p m.

Thinks Gandhi's Work Futile

He received me with great courtesy sitting on the floor of his house busily engaged in weaving rugs said the minister. He folded his hands before him the Hindu salute then shook hands with me. He then waved me to a seat on a rough bench and this graduate of Oxford once a famous lawyer in London talked of India and his peaceful revolution while he worked.

The minister asked Gandhi if the religious wars had changed to economic struggles and if he thought the country's condition was growing worse after the adoption of his policy of non co-operation refusing British manufactured goods and resorting to primitive handicraft.

Gandhi replied that present conditions were darker than before but that he was confident his policy would succeed.

I was strongly impressed with the speech of this man his brilliant arguments his faith in his peaceful revolution his sympathy for all creeds and religions his urbanity. But when I saw the squalid condition of the Indian people their backwardness in industry education and methods of sanitation on his dogged determination to bide his time weaving rugs till England relented seemed futile the Rev Mr Loring said.

Like British Report

The speaker described the role of England in India as ineffective rather than cruel.

One finds good roads there because the British must travel he said. There are good hotels and government buildings extensive rail roads. But these are things England needs. For the masses there is no help from England. The colleges are maintained only for the training of clerks for the civil service. There are no public schools. More than 90 per cent of the people are illiterate. England is there for what she can get not for humanitarian motives. Her position is expressed by the words of British newspaper leading announcements of steamship sailing. Some of them read 'To Hamburg, to New York to Marseilles but none to London.' It is Homeward Bound. They consider India as a resort or a place to work and are ever thinking of home.

The Rev Mr Loring told of the resources of India of the opportunities it had for a leap to its feet. There are rich cotton fields in the northern half and great cotton mills in Calcutta and Bombay. This section is rich in jute coal and iron he said but added that these resources are in the hands of Britain.

The natives have little voice in the government.

he said. All matters of taxation and appropriations for the army and navy are determined by the British representatives. The native members of parliament can only make appropriations for internal developments after the others are made and then they have no money he said.

CONVERTIONS NOT LASTING

All matters pertaining to India originate in the British ministry he explained. Lord Irwin the viceroy is in sympathy with India but he has no power.

The Rev Loring expressed the opinion that India could free herself if she could get over her internal strife.

He told of the ineffectiveness of American missionary work in India.

A bunch of street cleaners were pointed out to me as a group of reconverts to Hinduism he said. Conversions to Christianity are seldom lasting. A member of the upper caste is never converted. It is only the poor and ignorant. What the Indians need is not religious teaching they have too much of it now. They need education schools hospitals modern machinery western methods of commerce and industry.

Dr Sudhindra Bose on Imperialism in India

The Milwaukee Leader writes —

The uneducated masses in India and the British imperialistic policy at present form a vicious circle that is hard to break. Dr Sudhindra Bose Indian professor of oriental political science at the University of Iowa who is in Milwaukee to complete some literary work declared to-day.

PLEA FOR SELF GOVERNMENT

India continually asks Great Britain for more self government to which the latter replies 'You aren't ready for more self government yet. Only one out of 10 of you can read or write.'

India then asks Great Britain for more schools in which to learn to read and write and the answer is 'There is no revenue left.'

So long as this dilemma continues in which India finds itself Dr Bose adds and education proceeds no faster than it has during the 150 years in which it has been ruled by England it will take 10,000 years to educate the masses.

He compares this situation with that of the Philippine Islands under the United States.

EDUCATION DESPITE HANDICAPS

In the short period of 25 years 10 per cent of the natives have learned to read and write he points out in spite of the fact that the revenue these are able to yield is much less than that which India yields to Great Britain.

Where does the money go?

Sixty per cent of the revenue derived by the Government from India is spent on the furtherance of British imperialism outside India Dr Bose declares.

In recent years England has fought Egypt Persia Arabia Afghanistan Tibet China Burma and other eastern countries. And for these cam-

saving too in the item of travelling and halting charges of the Fellows.

Benares Hindu University.

Pandit Madan Mohan Malaviya has issued an appeal for funds to wipe off the debt of 15 lakhs which the Hindu University has incurred as also for adding to its invested capital whereby the incurring of fresh debts in future may be avoided. It is to be hoped that this appeal will be liberally responded to. We are not in favour of sectarian institutions; we would vote against their multiplication. But we do not want that any such existing institution should die of inanition. Rather would we hope that in course of time such institutions would shed their sectarian character. The old English universities have been gradually liberalised and modernised in this way.

Aligarh University Commission

We had occasion once or twice to refer to the delusive character of certain examination results of the Aligarh University. One of its former high honorary functionaries also criticised the manner in which its affairs have been conducted. We hope the persons who are now inquiring into all matters connected with it will be able to present a report at once thoroughly critical and constructive.

Mysore and Intermediate Colleges

The Educational Review observes —

The authorities of the Mysore University and the Mysore Durbar have taken a very interesting step in the re-organization of University education in the State which deserves wider attention. Abolishing the system of a three years course for the B.A. the University is going back to the traditional separation between the Intermediate and B.A. courses and establishing intermediate colleges which will be within the jurisdiction of the authorities of the University and fulfil a double purpose—that of preparing some students for the higher work of the University and preparing others for various vocations in life. The introduction of Diploma courses in a number of vocational subjects is a special feature of this new organization. In view of the fact that in various other parts of India, attempts are being made to put intermediate education outside the control of the Universities, this experiment will be watched with considerable interest.

Perhaps it is not too presumptuous on our part to suggest that those who advocate the placing of intermediate classes or colleges outside University control are not greater and more experienced educationists than Dr. Sir Brajendranath Seal, who is responsible for Mysore's educational policy. In this connection we may repeat some observations of Lord Haldane's London University Commission which we quoted once or more often before and which we now extract from *The Educational Review* —

It is also a great disadvantage to the under-graduate students of the University that post-graduate students should be removed to separate institutions. They ought to be in constant contact with those who are doing more advanced work than themselves and who are not too far beyond them but stimulate and encourage them by the familiar presence of an attainable ideal.

Teaching will of course predominate in the earlier work and research will predominate in the advanced work but it is in the best interests of the University that the most distinguished of its Professors should take part in the teaching of the under-graduates from the beginning of their University career. It is only by coming into contact with the junior students that a teacher can direct their minds to his own conception of his subject and train them in his own methods and hence obtain the double advantage of selecting the best men for research and getting the best work out of them. Again it is the personal influence of the man doing original work in his subject which inspires belief in it, awakens enthusiasm, gains disciples. His personality is the selective power by which those who are fittest for his special work are voluntarily enlisted in its service and his individual influence is reproduced and extended by the spirit which actuates his staff. Neither is it the few alone who gain; all honest students gain inestimably from association with teachers who show them something of the working of the thought of independent and original minds. Anyone says Helmholtz who has once come into contact with one or more men of the first rank must have had his whole mental standard altered for the rest of his life. Lectures have not lost their use and books can never fully take the place of the living spoken word. Still less can they take the place of the more intimate teaching in Laboratory and Seminar which ought not to be beyond the range of the ordinary course of a University education and in which the student learns not only conclusions and reasons supporting them, all of which he might get from books, but the actual process of developing thought, the working of a highly trained and original mind.

Our contemporary then points out that

It would be an inestimable advantage for the staff concerned with the teaching of the Pass courses to be in close association with the superior staff which will be in charge of the Honours and Post-graduate classes.

A Biography of Mohammed.

The Week edited by Dr H C E Zacharias says that on the 14th October the A. P. I. informed the public that

The Government of India have prohibited under Sea Customs Act the bringing into British India of any copy of the book entitled Mohammed a biography of the Prophet and the Man by F. Dibble wherever printed

This it calls misplaced tenderness and proceeds to supply the information that the *Manchester Guardian* of the 23rd September contained a review of the book which concludes —

The writer evidently regards dullness as one of the most deadly sins and seeks to give more life and brightness to his narrative by using lively language. When this has been said it should be added that he has given a vivid impression of Mohammed unimpaired by the bias and abuse which used to mar the picture. Mr. Dibble brings out the frailties of the man perhaps rather over-emphasising them and the virtues of the prophet and leader. His concluding chapters which are the best in the book indicate a high appreciation of the true greatness of Mohammed.

On this the comments of *The Week* are —
But such a book published by a responsible firm like Hutchinsons and capable of being read only by people in this country who have had an English education is prohibited in India. Whether are we drifting with this extreme governmental pandering to the religious so-called Moslems? One really begins to wonder whether Islam has become the State Religion of the Indian Empire or whether we have still got the much vaunted 'neutrality' in religion. If this is a sample of what the Indian Government believe to be the way not to invite further, but to stop actual Hindu Moslem communal tension then indeed one can only gasp at the naivete of it.

5000 Year Old Textiles

The following paragraph is going the round of the papers —

A discovery of some interest that has just been made by the Archaeological Department is that cotton was used in India for textiles as far back as 5000 B.C. The evidence for this comes from the prehistoric city of Mohenjo-daro where recent excavations brought to light a silver vase filled with jewellery and round about the vase had been wrapped a woven cloth of which some fragments still adhered to the metal. Needless to say these fragments were in a very fragile condition after their 5000 years in the soil. But the examination of them which has been made by Mr. Turner, Director of the Technological Research Laboratory of the Indian Central Cotton Committee at Bombay leaves no room for doubt that they are true cotton with the typical convoluted structure which is

the peculiar characteristic of that fibre. The ancient Babylonian and Greek names for cotton material (Sodu and Sindan) have naturally pointed to the Indus region as the home of cotton growing but there has always been a doubt as to whether the cotton known to the Babylonians and Greeks was not obtained from the cotton tree (e.g. the silk cotton tree *Eriodendron aurfractum*) rather than from the cotton plants of the genus *Gossypium*. This doubt is now disposed of by the discovery that true cotton of the latter kind was used for weaving in Sind at the age referred to long before even the former had been discovered.

Health of British India

The latest year for which vital statistics are available for all the provinces of British India is 1925. The table below shows the birth rate the death rate and the rate of natural increase per thousand inhabitants in each of ten provinces for that year.

Province	Birth rate	Death rate	Natural Increase
Central Provinces	43.9	27.3	16.6
Punjab	40.1	30.0	10.1
Bihar and Orissa	38.6	28.7	11.9
Bombay	34.7	23.7	11.0
Madras	33.7	21.4	12.3
United Provinces	32.7	24.8	7.9
Bengal	29.6	21.9	7.7
Assam	29.1	22.0	7.1
N. W. F. Province	26.0	19.8	6.2
Burma	25.4	18.7	6.7

In 1925 the Central Provinces had the highest birth rate, and Burma, the lowest the highest death rate was registered by the Punjab and the lowest, by Burma, and the Central Provinces had the highest rate of natural increase and Bengal, the lowest. On the whole Bengal was in the most pitiable condition its natural rate of increase being the lowest showing that its inhabitants had on the whole the lowest vitality. No wonder the Weston Award having most consciencelessly robbed it of its wealth of revenue and deprived it thereby of the power of making adequate provision for sanitation, medical relief, education and economic development.

Diarchy

The creed of Non-operation damned diarchy in advance and opposed council entry. The Swarajya Party, a rebellious wing of the party of Non-operation, advocated council entry but opposed the acceptance of ministerialships, though perhaps on account of the argument of the settled fact or owing to lack of courage

to oppose some of its influential members it felt constrained to allow or support the acceptance by its members of salaried presidencies of legislative bodies and memberships of Government appointed committees and commissions. However, both orthodox non-cooperators and the insurgent Swarajists have throughout opposed the acceptance of ministries. The Liberals have all along been in favour of working diarchy and accepting ministries, etc. It is they who have given diarchy a trial and worked it either as ministers or as members of the executive councils. But they, too, have damned diarchy. Their unfavourable criticism of diarchy has a special value, because their condemnation has not been *a priori*—it has not proceeded from considerations of abstract principles. But they have found out the defects and unwelcome character of diarchy by actual experiment conducted by themselves.

For this reason no member of the Liberal party ought to have accepted office in any province as minister or member of executive council. They know that by the very nature of diarchy they cannot do justice to the subjects entrusted to their care. They should not therefore have placed themselves in a position which would damn them. But in every province Liberals have been found to accept office.

The Bengal Ministry.

In addition to the considerations indicated above which go against the acceptance of office under diarchy in any province, there were special reasons in Bengal why ministries should not have been accepted. Large numbers of persons have been deprived of their liberty without trial. No definite charges even have been framed against them. One hundred and forty six of them are still in detention. And they are in detention for an indefinite period. They have already been in detention longer than the period for which some men openly tried for the offences *insinuated against the detenus* were sentenced imprisonment. All shades of political opinion to in Bengal have denounced these detentions and urged either the trial or the release of the detenus. But the Government has had neither the courage to adopt the first step nor the sense of justice to take the second. And so far as public information goes, no Bengal minister has ever been able to do anything to obtain justice for the detenus.

For these reasons alone, nobody ought to have accepted a ministry in Bengal.

Another reason why a ministry ought not to have been accepted by anybody in Bengal is that under present arrangements the Bengal Government has an utterly inadequate amount of revenue at its command for all sorts of public expenditure, and, therefore, even if that Government had been disposed, as it is not, to make the largest possible allotments for sanitation, medical relief, education and economic development, it could not have made any decent provision for these departments. Hence every Bengal minister is bound to fail to show any good work commensurate with the power and self enjoyed by him. So every one in Bengal to whom a ministry was offered ought to have declined to accept it so long as Bengal was not given a revenue proportionate to her population, her revenue collections, and her sanitary, educational and other needs.

We have all along recognised that some little good may result from the working of diarchy. But the claims of humanity and justice of self respect and the urgent need of a better constitution and better revenue assignments, make it imperative that we should forego for a time these little advantages in the expectation of securing greater good. There is a Sanskrit adage which runs—*Sarinashe samutpanne aridham tyajati panditah*. We may interpret it for the occasion to mean that to secure the whole a part should be sacrificed, as fingers, toes, hands, legs etc., are amputated in order that the other limbs and life may be saved.

As regards the distribution of the portfolios between the two ministers, the education portfolio ought to have been given to Sir P. C. Mitter, as he is better educated, better informed and better qualified to deal with matters educational than Nawab Musharraf Hossein. In the Moslem community of Bengal there are highly educated persons better qualified than the Nawab to tackle educational problems. But none of them is a minister. Among the Bengali Hindus also there are better qualified persons to deal with educational problems than Sir P. C. Mitter. But they, too, are not ministers. Sir Prahbas has, however, one preponderant claim to the education portfolio which, so far as our information goes, no other Bengal M. L. C. has. He has for years past evinced his practical sympathy with the movements for the spread of educa-

tion among the masses by contributing Rs. 200 every month to the funds of the Society for the Improvement of the Backward Classes in Bengal and Assam

There has been a proposal to appoint two other ministers in Bengal in order to "stabilise the ministry". Its plain meaning is that the leaders (or the arch-intriguers?) of two of the groups of M. L. A. who may still be recalcitrant may have to be "squared" in this way. In a province which has no money for most things that are worthwhile the appointment of two more ministers would be a scandalous waste of public money. The proposal is in abeyance for the present. Its underlying idea, however, has been very well brought out by the sarcastic suggestion of *The Musalman* that fifty-five more ministers ought to be appointed on a salary of Rs. 200 per head per mensem thus obviating the least chance of the wrecking of any ministry. It was Sir Robert Walpole who from his experience of Englishmen of his day, made himself responsible for the *obiter dictum*, "Every man has his price." Is there now in our midst among British bureaucrats any lineal or collateral descendant of that British worthy?

Unity Conferences

There are two means of bringing about communal unity: terrorism or frightfulness, and friendly negotiation. Either can be tried at a time, but not both simultaneously. Professional goondas and those who, without being professional hoodligans, have an overdose of the goonda element, obsession or bias in their natures, may favour the first method. But there should not be the least suspicion that those who follow the method of negotiation were in secret league or sympathy with or even connived or winked at the wicked deeds of the goondas who have struck down or attempted to murder Hindus obnoxious to them owing to reasons of fanaticism.

Not that personally we have any such suspicion. But what we wish to make clear is that, if the Moslem leaders who take the leading part in Unity Conferences have any effective influence over the turbulent elements of their community, why are they not able to prevent the outrages referred to above which have already exceeded a dozen. If they have no such effective influence, what is the good of discussing and

deliberating with them? Would it not be better, if possible, to negotiate with the leaders of the goonda group, professional and non-professional? Perhaps it would be impossible to discover them—at least without the whole-hearted co-operation of the C. I. D., which we do not know how to secure. Perhaps Lord Irwin's advisers may be able to tell him, if he is in accord with their ideas of statecraft.

We are seriously and sincerely desirous of securing intercommunal harmony and friendship. But we do not want repetitions of the sorry exhibition of Hindu 'leaders' and Moslem leaders' confabulating day after day and coming to an agreement which their so-called followers do not accept in practice, or not being able to come to any agreement at all.

As regards the ostensible causes of the Hindu-Moslem conflicts, our opinion is that Hindus and all others (including British soldiers, of course) should be free to pass along all public thoroughfares with muslin and perform such muslin in their homes and institutions without any restriction as to time or place, except such as would apply to all kinds of noise or muslin by whomsoever made, and that cows may also be slaughtered by Muslims and others at all times in any number in slaughter houses, and in mosques and other places owned by Muslims subject to the rules made by municipalities and other public bodies and officers in the interests of health, sanitation and decorum. As regards conversions and reconversions, minors are not to be converted or reconverted, except with their parents, and proselytism must not be conducted secretly by clandestine methods or by intimidation or pecuniary or other worldly inducement.

But "cow-killing" and "music before mosques" are only the ostensible causes of intercommunal dissensions. The real causes are political and politico-economic. Most Muslim leaders want a division of appointments in the public services and of seats in representative bodies on a communal basis, in proportion to their numbers where they are in a majority and in excess of that proportion where they are in a minority. We are on principle opposed to any division of appointments and seats along communal lines. In the interests of all the inhabitants of India, they should go to the ablest and the best qualified. But if the Muslim leaders

had agreed to a division of them along communal lines everywhere consistently on the basis of population alone for a strictly limited number of years it is very probable that some settlement would have been arrived at long ago. We would have continued all the same to stand for the principle of the open door for talent everywhere, though our voice would not have counted.

According to the census of 1921 the Parsis in India numbered exactly 101, 778, and the Musalmans 68, 735, 233. The Parsis have never asked for or obtained any reserved proportion of appointments, seats in representative bodies etc. Yet what a large space they fill in India in the spheres of politics, industries, commerce, civic activities, scholarship, social reform, literary achievement, and philanthropy. They have obtained this place by their education, character, tact, energy, enterprise etc. Muslims (and all other minority and majority communities in India, too) should learn from contemporary and past history that power and prosperity can be obtained and kept not by the means by which they are trying to obtain it but by keeping continually fit. A time there was when they had supreme power over the greater part of the country and had wealth, too, in proportion. Why could they not keep either? Why did they lose both? Because they deteriorated physically, mentally and morally. So now, even if they get all they want by means of some pact or Act, they would not be able to maintain their position if they did not adopt all those means which are the natural passports to success. On the other hand, if they do adopt all these means, they would be able, without the aid of any pact or Act to fill a space in the life of India in every sphere, largely out of all proportion to their numbers, as is the case with the Parsis. The craving for a "short cut, a royal road, a dominance "made easy," is futile.

The historically unprovable and incorrect notion that the Muslims were masters of India before the establishment of British rule is responsible for much heart burning and mischief. If educated Muslims would only consider how many battles altogether the English fought with Indian Moslems and Indian non Moslems (Marathas, Sikhs, Jats, Gurkhas, Rapputs, etc.) and how many of these were decisive and crucial, they would be able to understand that sovereign power really rested for the most part from non-

Moslem to British hands. We do not write these things to humiliate Moslems. They and non Moslems have equally lost the status of free men. None of them can recover freedom by quarrelling as to who would be the top dog when the British would cease to be the top dog. By such quarrels no Indian community can be the top dog. Such quarrels are the surest means of preserving the position of under dogs. The thing is, if India ever be free, no community as a community will or can be dominant. If, as is probable, self-ruling India has the party system of Government, the party in power may sometimes contain even a larger number of members of minority communities than of majority communities, and these members of minority communities may be Muslims.

Supposing the Muslims succeed in getting the number of seats they want, they will still always be in a permanent minority in the Central Legislature and in all provincial legislatures except in the few provinces where they are in a majority. For, if they stick to communal electorates and reserved seats, non Moslem constituencies would seldom return a Moslem candidate. On the other hand if they sincerely throw in their lot with the nation at large and if they devote the utmost energy to progress in education, they may sometimes succeed in capturing even more seats than they are now trying to secure by previous agreement. Thus, we know, would appear incredible to them. But we write what we believe to be true.

Trial of Murderers in the Punjab

Some organs of Muslim opinion in the Punjab are dissatisfied with the speed with which sentence had been pronounced on some coreligionists of theirs who killed or attempted to kill some Hindus. It appears, however, that all the formalities of a legal open trial have been duly gone through and sentences pronounced after detailed and dispassionate consideration of all the evidence. Nothing more is usually done in trials for murder or grievous hurt.

The offences are plainly the outcome of religious hatred and fanaticism. They bear some resemblance to the so called Ghazi crimes in the frontier and Trans-frontier areas. When a so called Ghazi murdered a Britisher, he was summarily tried according to the frontier law and hanged

and his body burned. His relatives were not allowed to give his body or ashes a Muslim burial. As Hindu lives are not as valuable and sacred in British eyes as British lives, no such drastic steps are taken for the protection of Hindus from religious fanaticism. And it is good that such summary methods have not been adopted in the case of murders of Hindus. That kind of justice is best in the long run which is not vindictive and which follows the ordinary legal procedure.

Detenus Day

The Swarajya party did well to celebrate a detenus' day in Calcutta. But they would have done better from the point of view of the people of Bengal as a whole and in the interest of the detenus themselves if they had sought and obtained the active co-operation of persons of all political parties and also of persons who are not politically minded in the celebration. The demonstration would then have been more impressive. For every body knows that in Bengal whatever a man's politics may be and even if he has no politics, he feels that a grievous wrong has been done to the detenus and that the conditions in which they are kept in or outside jails are heartless and very discreditable to a civilised Government. It is good however that in spite of the celebration having been managed on party lines, many people who do not belong to the Swarajya party attended the meetings.

As a demonstration these meetings served their purpose. But one does not know what effective steps the Swarajya party or any other party has taken or can take to bring sufficient pressure to bear on the Government to release all the detenus without any further delay—we do not add, or bring them to trial, because if the Government had an iota of evidence against any of them, they would have been long ago brought before a court of justice.

Rabindranath Tagore's Return

Rabindranath Tagore returned to Calcutta after his travels in parts of Indonesia. His visit to these lands will be productive of incalculable good both to them and to India in years to come.

He was interviewed by a representative of the Free Press of India. Portions of

what he said in reply to questions are printed below.

Concerning what happened in Malaya owing to the discussion in the newspapers with regard to his condemnation of Indian troops being sent to China he said that a great deal more had been made of that incident than it really deserved. It was a piece of newspaper sensationalism which very quickly sank into the background and became universally forgotten. It was due to some entirely untrue versions of what he was reported to have said. This version had appeared in newspapers in the Far East and had to be contradicted. At the same time the Poet made it perfectly clear that he held strongly to his objections concerning the use of Indian troops in China, as likely to do incalculable harm to the age-long friendly relations between India and China. The incident had one good effect, because it at once drew the Chinese community in every part of South Eastern Asia to his side. The Poet stated that he had such a generous and warm-hearted welcome from them in every place he visited that in a measure it exceeded even the welcome given to him by his own fellow countrymen. He had a hope therefore that his recent tour had done something to establish an intimate friendship between India and China on a true and stable foundation. He hoped that those who appreciated the importance of a true entente cordiale between these two countries would be able to follow up what has thus been begun and enter through the door which was now wide open. All through his journey as in other tours also he had tried strictly to keep to the cultural aim and the object of his mission, thus laying the firm foundation of friendship and mutual understanding.

When asked whether the people of Java, Bali and Siam remembered India and were grateful for their heritage from her civilization and culture the Poet stated that the Siamese people keenly remembered with gratitude their debt to Indian culture and wished more and more to express it. There would be no difficulty in making a close international rapprochement between the two communities. On the other hand in Java and Bali, this past intimate link with India had been almost forgotten. It would have to be patiently recovered. In Bali the strange idea existed that the island itself had originally been the place where the events described in the Hindu Epics had occurred.

In conclusion the Poet emphasised again the necessity of carrying on the immediate work of cultural understanding and appreciation. It would need scholars who would go out with that definite object in view and funds would have to be provided for them.

Referring to his return Farward writes

It may be confidently expected that he will be accorded an enthusiastic ovation on the completion of his tour which was undertaken for the advancement of culture and for reviving the forgotten ties of kinship and friendliness which once linked those countries with India. Save the unwelcome incident, namely the latter controversy which for a time raged over his devoted head in the jungles of Singapore, the Poet's tour has been a round of enthusiastic receptions.

Even without consulting the Poet one may say that he would not allow his fame and greatness to be exploited for party purposes by being "accorded an enthusiastic ovation on the occasion of the completion of his tour" by men who are incapable of appreciating him. Considering that not a single political, social, literary, scientific, khadi, journalistic or industrial "leader" was present at Outram Ghat to meet him on his return, it is rather hollow and insincere on the part of *Forward* to speak of giving "an enthusiastic ovation" to him, particularly as it was that paper which took the leading part in reproducing with sensational headlines the lies and half truths published in the Malay papers. Others, too, received the cuttings, but consigned them to the waste paper basket. It is quite characteristic of *Forward* to speak of an ovation and at the same time remind the Poet of the "bitter controversy" carried on with the weapons of lies and half truths, of which the Swarajya organ took full advantage with avidity.

The Poet's mission was cultural. He is the *Purodha* of the Greater India Society, whose mission is the same. Quite appropriately that society gave him a most enthusiastic send off, and we have no doubt that equally appropriately it would accord an enthusiastic welcome to him.

Mr Srinivasa Sastri's "Imperialism"

Mr Srinivasa Sastri recently delivered a speech at the Rotary Club, Cape Town. A brief cable has informed the Indian public that he holds the opinion that "the whole future of India depended on Britishers and Indian moderates identifying their interest." This bit of opinion is such that even his friend and co-worker Mr C. F. Andrews has felt constrained to declare that he finds it "difficult to share Mr Sastri's briefly cabled opinion", and that he, Mr Andrews, is "a confirmed internationalist and not a British imperialist." Perhaps Mr Sastri's immediate colleagues and followers of the Servants of India Society may accept his views, but what do other moderates think?

an outspoken peroration, which does not appear to be attuned to the same key as Mr. Sastri's opinion. The Pandit said —

Gentlemen it is one of those ironies of fate to which a subject race is further subjected, that India should be required to prove its fitness to rule itself. Instead of asking Britain to prove that she has a right to manage the affairs of India in preference to Indians, the Statutory Commission will be required to report as to how far India has proved itself fit to enjoy any degree of responsible government. A Commission from which Indians are very likely to be excluded may also recommend to extend, modify, or restrict the degree of responsible government already existing. If India were as efficiently administered during the last 150 years by a foreign bureaucracy as it is claimed to be the case we should have had by this time a truly happy and contented people, with a high degree of education widespread in the country and with a record of remarkable progress in sanitation, medical relief and public health. Besides, we ought to have been thoroughly capable of defending ourselves and holding our head high among the nations of the world. As a people we should not have presented the sorry spectacle of illiterate masses, of abject poverty and malnutrition, resulting in low vitality, lack of resistance to disease, short life period and huge infant mortality. No amount of efficiency of a foreign rule can ever compensate for the moral stunting of the race, the lack of high spirits, courage and self respect, and an almost incurable sense of inferiority. All these are the indisputable results of what Mr Asquith (now Earl of Oxford) during the menace of the German War, called the intolerable degradation of a foreign yoke. Gentlemen a nation like an individual is a distinct entity. It has its own temperament, its own characteristics, its own soul. Just as in the case of an individual so in the case of nations freedom is essential for the healthy growth of its soul. In the scheme of Providence when an individual has finished his life work he dies. So has it been with nations and their civilizations. But India has lived in history for thousands of years, and it is not yet dead. It is legitimate to conclude that it has yet some valuable contribution to make towards world-progress. Let us hope the world standard of progress has not fallen quite so low that it is now merely confined to the prowess of arms or is to be solely judged by the measure of territories brought under subjugation and by the concentration of wealth through a combination of military threats and political and commercial diplomacy. Human progress would be a very sordid and sorry affair if there was nothing higher and nobler to achieve. India does not ask for a place in the Sun. It only wants a free scope for its self expression. The agony of its soul lies in the cramped influence of the heavy pressure of a foreign yoke. It only longs for that dignified freedom which will help it in the evolution of its own nature for the service and not the domination of the world.

Pandit Gurus Address

Pandit Iqbal Narayan Gurus thoughtful and able address as president of the United Provinces Liberal Conference ended with

Pandit Gurus on Dr. Besant's Bill.

The commendable features of the Commonwealth of India Bill to which Pandit Gurus

drew attention in his address really deserve praise. One would however like to know what he thinks of the number of representatives in the Central Legislature assigned to the various provinces in the Bill—a subject to which we have drawn attention in a previous note in this issue

The Statutory Commission

We have expressed our opinion in a previous issue about the personnel of the statutory commission. It should consist of a clear majority of non-official leading Indians of different political parties with preferably an Indian president. If such an Indian majority cannot be assured an entirely British personnel would be preferable so that the world may understand that Indians had nothing to do with its conclusions. In the case of the Commission having an entirely British personnel or a minority of Indian members no Indian should appear before it to give evidence. What the conclusions of such a commission would be may be anticipated even now in their main features.

There is, of course, the previous question as to whether there ought to be a commission at all to inquire into our fitness for self rule. The need of such a commission cannot at all be admitted. No nation has any right to judge us. Self rule is a birth right to which every people is entitled. It is only by force that we are kept deprived of it.

The only proper question to investigate is how the constitution of a self ruling India ought to be framed. In dealing with such a question the help of foreign experts may be taken.

And if our fitness for self rule is to be at all judged of we ourselves are far better judges than foreigners. Englishmen of all political parties make great mistakes in judging of the political capacity of many of their own countrymen. For many of their prime ministers and cabinet ministers, chosen by their countrymen, are responsible for egregious and very serious blunders. It is ridiculous to assume therefore, that English judges of our political capacity would be infallible or reliable, particularly as Englishmen are interested in pronouncing us unfit.

The Viceroy's Invitation to Some Indians

It has been given out now that the Viceroy's invitation to some Indians to meet

him is for the purpose of ascertaining their opinion as regards certain details of the Statutory Commission. That he is to see these persons separately is a clever move. Lord Irwin would thus be able to utilise for British purposes the differences important or unimportant, in the opinions expressed by them.

Speculation is already rife as to why in selecting persons to invite his lordship has given a wide berth to some provinces and sections of the people. What is the policy underlying this discriminatory move?

Prabasi Banga Sahitya Sammelan

The Prabasi Banga Sahitya Sammelan will hold its sixth session in Meerut during the next Christmas week. The following gentlemen have been unanimously elected to preside over and conduct the deliberations of the different sections noted against the name of each:—

- (1) Sir P. C. Ray—General President
- (2) Babu Kedarnath Banerjee (Benares) President, Literature Section
- (3) Dr. Sisir Kumar Mitra (Benares Hindu University)—President, Philosophy Section
- (4) Dr. Radhakamal Mukherjee (Lucknow University) President, History and Economics Section
- (5) Dr. Niranjan Bhar (Allahabad University)—President, Science Section
- (6) Babu Sarada Ch. Ukil (Delhi)—President, Arts Section
- (7) Mr. A. P. Sen (Lucknow)—President, Music Section

The efforts made by Bengalis domiciled or sojourning outside Bengal to keep in touch with the Bengali language literature and art are commendable.

We have one suggestion to make. The promoters of the Prabasi Banga Sahitya Sammelan would do well to set apart a day or an evening to meet all local leading Hindi and Urdu speaking persons interested in literature and art, in order to make closer the cultural ties which exist between Bengal and Upper India. We mention only Upper India, as the Sammelan has hitherto met in some town or other in that region.

About the Age of First Motherhood in India Miss Mayo Contradicted

Dr. Miss M. I. Balfour M.R., who wrote a letter to the *Times of India* on the 10th October last on the subject of the age of first motherhood in India, is engaged in collecting data for Maternity and Infant Welfare work from the hospitals in Bombay. Her letter is reproduced below.

I have recently had the opportunity of reading Mother India and have been surprised at some of the statements made, especially with reference to child mothers. I have some facts relating to that subject which I have collected in the course of an investigation into the conditions of child birth and I am asking you to be kind enough to publish them in the hope that they may be of service to anyone who proposes to write a reply to Mother India. I have notes of 304 Hindu mothers delivered of their first babies in Bombay Hospitals. The average age was 18 years 8.6 per cent were 17 years or over 14.4 per cent were below 17 14 was the youngest age and there were 3 of that age. I have compared these figures with the reports of the Madras Maternity Hospital for the years 1922-24 2312 mothers were delivered of their first babies. The average age was 19.1 years 86.2 per cent were 17 years or over and 13.8 per cent were below 17 13 was the youngest age. There were 7 mothers aged 13 and 22 mothers aged 14. The Madras figures included not only Hindus but women of other communities also. I have reports of 3964 cases of child birth from other parts of India including the North. Of these only 10 were below 10 years of age 13 was the youngest age. There is no doubt that child birth sometimes takes place too early in India and even more so that cohabitation commences too early. Legislation is badly needed. But Miss Mayo's words at p. 30 of Mother India are as follows. The Indian girl in common practice looks for motherhood nine months after reaching puberty or anywhere between the ages of fourteen and eight. The latter age is extreme although in some sections not exceptional the former is well above the average. I think the figures I have given prove that the cases instanced by Miss Mayo do not in the least represent the common customs of the country.

civilization and a people of extraordinary virtue patience and spiritual quality I cannot here attempt to track her through the vivid maze of her assertions. It must suffice for me to deal with a few characteristic illustrations.

Then follow his string of contradictions of Miss Mayo's untruths.

Miss Mayo writes as though the horrors of filth and superstition surrounding child birth were peculiar to Hindu society. Suppose that one were to make a realistic picture of maternity in any other Asiatic country or for that matter as has often been done in the slum cities of Europe and the United States would any of Miss Mayo's interferences apply? She cites examples in detail of Indian male sexuality. It would be impossible I think to produce anything of the kind more loathsome. But Miss Mayo cannot be unaware that the records of all protective societies in Europe and America contain incidents which fact for fact are as horrible as these. She asserts that the majority of Hindu men are through indulgence and perversion impotent at twenty-five. The sufficient reply to that astonishing accusation would seem to be that if it were anything like half true the figures of population under the Pax Britannica would not cause any alarm to the government of India. In treating of the Untouchables and the so-called criminal tribes she implies that such agencies as the Salvation Army stand virtually alone in their remedial efforts. The truth is that long before the rise of their great champion Gandhi a powerful section of Indian reformers labored as earnestly for social redemption as for political advance. Miss Mayo quotes Rabindranath Tagore in such a way as to imply that he is an apologist of child marriage. The passage cited from the Bengali poet is a condensed statement of the case for early marriage (an entirely different thing) as accepted throughout the Orient. Rabindranath Tagore is a leader of the Brahmo community which fifty years ago carried through the Indian Legislature the first reformed marriage act. Miss Mayo speaks as though the seclusion of women behind the *purdah* were universal throughout India and she says again and again that no Indian girl or young woman can be left unprotected for an hour since she would assuredly be violated! The seclusion of women is an established custom only in certain provinces. Over great tracts of the country there is no *purdah*. Women move freely and unveiled through the bazarrahs. Women of the peasant and coolie classes work in the open as they work everywhere in the world. Miss Mayo in an astonishing lapse, quotes as a recent dictum the most threadbare piece of cynicism that is passed about among Europeans in India, namely that one week after the withdrawal of the British there would not be a rupee or a virgin left in Bengal. Apart from the point that according to Miss Mayo's own demonstration there are almost no virgins in Bengal over ten years of age, one may note the somewhat glaring historical fact that before the advent of the British Bengal certainly showed no despicable power of social resistance against, as Jaccary put it every marauder of the East. And finally in this brief series of instances Miss Mayo has been led to believe that there is an inherent contrast between the ethical standards of Hindu society and those of the Indian Moslems, a contrast

Mr S K Ratchiffe on 'Mother India'

Mr S K Ratchiffe formerly editor of *The Statesman* of Calcutta, has reviewed Miss Katherine Mayo's Mother India in *The New Republic* of New York dated the 21st September last. He begins the review by telling the reader

Two years ago when I read Katherine Mayo's propagandist volume on the Philippines, it seemed to me certain that she would go next to India and produce a book enforcing a conclusion precisely similar to the one reiterated in *The Isles of Fear*. The thesis of that vigorous manifesto it will be remembered is that the United States must keep its governing hand upon the archipelago for if it did not the Filipinos would be skinned alive by their own landlords lawyers usurers.

He recites or refers to some of the terrible and horrible things which the authoress has said of India and then observes—

A great part of Miss Mayo's facts cannot be challenged and yet the picture she has drawn is profoundly untrue. It is a lie upon a mislie

greatly to the advantage of the latter. This is one of the most surprising things in the book, and with it is coupled the extraordinary blunder of Miss Mayo's assumption that the vile races of India are all Moslems. Any British soldier would have put her right there.

This is followed by Mr. Ratchliffe's statement that he has been "able in this article to refer to no more than a hundredth part of the assertions and inferences that provoke debate in 'Mother India.' Any tolerable statement of the other side would require a volume at least as large as the one under review I end with a word of the kind which I think no European and no American who has dwelt among the Indian people could refrain from uttering. And this is what he says —

I lived for five years in India, occupying a position which gave me unusual opportunities of meeting Indians of different kinds. I had many Indian friends. I saw the inside of Indian homes. I observed the laboring Indian in cities and villages. And, as I call up the memory of those people and scenes, and set the reality of my recollection alongside the appalling picture which Miss Mayo has provided for her very large company of readers in several continents, I am filled with bewilderment and regret. The vast multitude of India's common people makes upon every Westerner a wonderful impression of goodness, endurance and dignity. We know for everybody tells us so that the Indian woman has a terribly hard time. But I see her as she comes up every morning from her ceremonial bath in the river walking noiselessly with a troop of her fellows, a figure unsurpassed in the world for beauty and serenity and grace and I marvel at the power of spirit which has so unadvisedly conquered in her. As for the intelligent class of India, they are made up of many communities all in their several ways endowed with remarkable and attractive gifts. They inherit a social system of extraordinary complexity. It is their task to bring it into relation with the modern world and be very least that we can do is to recognize that the task is one of immeasurable difficulty. But however difficult it may be one thing is surely beyond dispute: the Indian system can be changed only with infinite labor and from within. An alien power must leave it for the autonomous India of tomorrow. Miss Mayo quotes, with evident approval, the wildly nonsensical saying of some acquaintance to the effect that the crime of the British government is that it has stood protector to this awful system of darkness and oppression which is left to the mercy of the harder races of Asia, would long ago have been swept into the void. Here perhaps we have the book's prize remark from a Westerner about India. There are more than 300 millions of Indian people and the one thing we know about them that is above and beyond all controversy is that they are one of the very few eternal races of mankind, being rooted in a social system which has withstood the storms of at least thirty centuries.

In the same number of the *New Republic* which contains this review article of Mr.

Ratchliffe he has reviewed a book called "India and the Earthly Paradise" by Miss Sylvia Pankhurst formerly a militant suffragist, about which he writes —

Miss Pankhurst denounces child marriage and the Indian treatment of women, the tyranny of the priesthood and many other evils of the Hindu system as unmercifully as the author of "Mother India" herself and her citation of evidence is almost as dreadful but she comes to a conclusion precisely opposite. Miss Mayo says the Indian system is so hideous that the British must stay and rule very much more hardly than they do now. Miss Pankhurst, not disguising any of the facts that seem so appalling to the Westerner is convinced that the British must go.

A Missionary Condemnation of Miss Mayo's Book

A statement with regard to Miss Mayo's book, "Mother India," signed by Rev. Dr. N. Macdonald and Mr. J. O. Philip Secretaries and Miss A. B. Van Doren Hon. Officer has been issued to the Press in the name of the executive committee of the National Christian Council of India, Burma and Ceylon the only dissentient member being Bishop J. W. Robinson who does not find that he can assent in its terms. The Lord Bishop of Calcutta and metropolitan of India is the chairman and Dr. S. K. Dutta is Vice-Chairman of the Council and the executive committee includes Rev. Chulamber Bishop of Dornakal, Rev. J. F. Edwards, Dr. C. H. Greenfield, Bishop of Madras, Rev. J. Mackenzie, Rai Bahadur A. C. Mukerji, Messrs. A. T. Paul, B. L. Nalla Ram and Rev. H. C. C. Velt.

The statement reads as follows in part —

It has never been denied either by Indians or by foreign missionaries that great social evils exist in India and it is a matter of common knowledge that strenuous and organized efforts are being made by groups of Indian reformers to get rid of them. Yet we representing a body of men and women who are in close touch with the people and are conversant with their every-day life, we hesitantly assert that the picture of India which emerges from Miss Mayo's book is untrue to the facts and unjust to the people of India. The sweeping generalizations that are deduced from incidents that come to the notice of the author or that are suggested by the manner in which these incidents are presented are entirely untrue as a description of India as a whole. At the end of the book Miss Mayo admits that she has left untouched other sides of Indian life and for that very reason we can affirm that Indian life does not present the dark and the evil aspect which this book suggests and that the ugly and repulsive and disgusting aspects of it that are emphasized in the book are not the predominant things in Indian Society.

Beauty and culture, kindness and charm, religion and piety are to be found alike among the highest and the humblest. Miss Mayo leaves no room for these in her picture.

The Neill Statue in Madras

Those who have been trying to have the Neill Statue removed or to break or disfigure it are morally justified in doing so. But it seems to us that it is bad economy to undergo imprisonment to bring about the result aimed at. If British officials in India choose to have the greatness and civilisation of their country advertised by, among other things, the statue of a ferocious brute like Neill, let them please themselves. Instead of suffering imprisonment in the attempt to remove this precious reminder of military virtues, why not draw attention to Neill's doings by means of a permanent poster in some public place in Madras? Some extracts from Kaye's history of the Sepoy War would serve the purpose.

Orissa Floods

An appeal for two lakhs of rupees for relieving the widespread and acute distress caused in Orissa by flood has been issued over the signatures of Pandit Gopabandhu Das and Mr C F Andrews. Such an appeal ought to meet with a ready response in the case of any province. In the case of Orissa the response ought to be quicker and greater. For Orissa is a poor country, whose welfare has been neglected for more than a century. Unlike most of the other provinces, Orissa has not been the chief object of care—so far as that care goes, of any provincial Government. It has been neglected throughout. The people of India have been partly responsible for this neglect, in that they have acquiesced in Orissa's being given a back seat all along. For all these reasons all the provinces of India should come to the rescue of this stricken land once the home of a distinct culture of high grade and still one which Hindus consider it a merit to visit.

The Situation in Kharagpur

Whenever and wherever large numbers of the labouring population are thrown out of employment or about to be so, Government maintains the attitude of the unconcerned spectator—except when shooting is on. It has to be resorted to the unemployment and sufferings of so many people are not its business. In Britain, on the other hand, even now, so many years after the end of the great war, nearly eleven lakhs of un-

employed persons are being given weekly doles. During all these years doles have been given without break, and that sometimes to more than two million people. Why does the same British Government adopt a different attitude in India? Partly because the governed here are not the lith and lin of the governors, partly because, thanks to enlightened British rule and exploitation, the unemployed and dependants in India probably exceed the employed in number, and there are other causes. It is, however, the duty of Government to actively intervene to prevent strikes and unemployment.

'The Chosen Region of Lies'

The historian Freeman has, in one of his essays, characterised royal proclamations and declarations as "the chosen region of lies." All kings and emperors do not certainly tell lies in all their proclamations, etc. Some may have done so, whilst the words of some others become as good (or bad) as falsehoods, because they are not given effect to by their successors and servants.

We were reminded of Freeman's words while reading what has appeared in Sir Sidney Lowe recently published work on 'The Reign of the King Edward VII' relating to the appointment of Mr (Lord) Sinha to the Viceroy's Executive Council. It is related in that book that on November 1, 1908, the fiftieth anniversary of the assumption by the Crown of the direct Government of India, the King Emperor Edward VII issued a masterly message to the princes and peoples of India which repeated and confirmed the declarations and assurances contained in Queen Victoria's famous proclamation of 1858. The equality of treatment promised in that proclamation to all British subjects, irrespective of race, creed, colour and caste, as regards employment in the public services and so on need only be referred to. As noted above, this assurance was included in those repeated and confirmed by Edward VII. But that monarch objected very strongly to the appointment of 'Native Members' to the Viceroy's Executive Council. Some passages from Sir Sidney Lowe's work which relate to the affair are reproduced below.

The suggestion that native members should be admitted to the Viceroy's Council had received the Cabinet's approval as early as May 3 1907. The King however and many members of the House

of Lords objected to the proposal on the ground that it might give offence to the native princes and it was not until nearly two years later that Mr Sinha, an eminent Hindu lawyer was suggested as a suitable member of the Viceroy's Council. On February 24, 1909 Lord Morley had a long and once with the King. Morley records that King found the native member a great stumbling block.

Morley wrote two letters to the King on the subject

To the first of these two letters the King replied from Biarritz on March 1st —

"The King regrets that he cannot change his view on this subject and has thought it over quite as Lord Morley has. He remains a lover of opinion that this proposed step is fraught with the greatest danger to the maintenance of the Indian Empire under British rule. The reasons are well known to the Secretary of State as well as they are to the Viceroy but as the latter apparently is putting great pressure on the subject, and at the last meeting of the Cabinet Council the Government were unanimous on the subject the King has no other alternative but to give way which accords his will. He however wishes it clearly to be understood that he protests most strongly at this new departure. God grant that the Government in India may not suffer from it. Beyond that the King can say no more.

To the second letter the King replied again with strong feeling still protesting but admitting no alternative against a unanimous Cabinet. Morley in the course of his reply declared his firm conviction that the marked fulfilment of Queen Victoria's promise will win for your Majesty an exalted and enduring place in the deepest affections of the Indian subjects of the British Crown. To this use of Queen Victoria's name the King added the poignant marginal comment —

"This is the answer to my letter. Why he should bring in the name of Queen Victoria I can not see nor how it bears on the question. I myself do not think she would have approved of the new departure. I have had to sign the objectionable paper.

E R March 20

Mark that if King Edward VII knew the mind of his august mother the Queen Victoria correctly she would not have approved of the new departure. And yet she promised equality of treatment to all her subjects in her proclamation.

Lord Minto also had some correspondence on the subject with the King. Here is a portion of one of the King's letters in reply

"My dear Minto—As you hold such strong views on the subject and have given me many excellent reasons for such a new departure I am very unwilling to differ from you as well as the Secretary of State on the subject. At the same time I hold very strong and possibly old fashioned views on the subject, which my son who has so recently been in India entirely shares.

"During the unrest in India at the present time and the intrigues of the Natives it would I think be fraught with the greatest danger to the

Indian Empire if a Native were to take part in the Council of the Viceroy as so many subjects would not be desirous that a Native should take part. Besides if you have a Hindu why not a Mohammedan also? The latter would strongly claim it. If the present view which you so strongly advocate is carried into effect, and you find it does not answer you will never be able to get rid of the Native again. The Indian Princes who are ready to be governed by the Viceroy and his Council would greatly object to a Native who would be very inferior in caste to themselves taking part in the Government of the country. However clever the Native might be and however loyal you and your Council might consider him to be you never could be certain that he might not prove to be a very dangerous element in your Council and impart information to his countrymen which it would be very undesirable should go further than your Council Chamber.

Attention has here to be drawn to the fact that King Edward's son His Majesty George V according to him, "entirely shares his father's old fashioned views on the subject. The reigning King Emperor however on his accession to the throne repeated and confirmed Queen Victoria's proclamation. It is not impossible that he had by that time changed his views—a charitable historian would say.

We shall extract one more letter of King Edward to Lord Minto which shows that His Majesty had objections to the appointment not only of native members of the Viceroy's Executive Council but to that of native clerks as well who see and copy secret correspondence. Here is the letter —

I have had an opportunity of discussing question with several of those who have not lost touch with India. I find that they all look upon the experiment (for I can call it nothing else) with considerable alarm and dismay.

There is one point you mention which greatly surprises me, which is that secret correspondence with the Secretary of State is seen by Natives and that secret papers are copied in your office by Natives. This appears to me to be a most dangerous and objectionable practice and I am astonished that it should exist.

Now that it has been decided to have an Indian member on the Executive Council the Government of India will in future be always obliged practically though not perhaps theoretically to replace him by another Indian.

I am afraid it is the thin end of the wedge and it will require a most resolute Viceroy to avoid being forced to nominate one if not two Native Members of his Council.

I can hardly believe that the present appointment of a Hindu will not create great and just irritation among the Mohammedans, and that the latter will not be contented unless they receive assurance that one of their creed succeed Mr Chhabra.

Native Executive Councillors and Clerks and the Betrayal of State Secrets

One need not say what one feels on reading of King Edward's opinion of the trustworthiness of Indians as Executive Councillors and clerks. But it may be noted that so far no Executive Councillor has betrayed any secret. As to the clerks who see and copy secret correspondence let Sir Guy Fleetwood Wilson long a distinguished British official in India bear witness.

In a speech made when he was returning from the office of Finance Member of the Indian Government in 1913 he is reported to have said

I wish to pay a tribute to the Indians whom I know best. The Indian officials high and low of my department through the years of my connection with them have proved themselves to be unsparing of service and absolutely trustworthy. As for their trustworthiness let me give an instance. Three years ago when it fell to my lot to impose new taxes it was imperative that their nature should remain secret until they were officially announced. Everybody in the department had to be entrusted with this secret. Any one of these from high officials to low paid compositors of the Government Press would have become a millionaire by using that secret improperly. But even under such tremendous temptation no one betrayed his trust. So well was the secret kept that a ship laden with silver in Bombay delayed unnecessarily its unloading for three days and was consequently caught by the new tax.

European foreign offices including the British have no objection to obtaining the secrets of other States by bribing and similar means. Hence and as India stands in need of political freedom it is difficult for Britishers to believe that imperialistic secrets would be safe in the hands of members of politically subject people. But Indians believe that if they accept any office one of the conditions of which is that they are to keep secrets passing officially through their hands it would be dishonorable for them to betray them.

If however any secrets come into our hands without recourse to any dishonorable means we are certainly entitled to make use of them for promoting the interests of our country.

The correspondence published in the previous note ought to be a fresh eye opener to Indian officials high and low. By the generality of Britishers they are neither respected nor looked upon as equals. As for the Indian Princes we are not aware that they ever objected to the appointment of

Indian Executive Councillors. If they ever did that may have been under the political instigation or intimidation.

King Edward's nervousness about secret correspondence being seen by "native" clerks indicates that there is much correspondence of which Government cannot be quite proud.

'Native'

Recently there was some discussion in the British House of Commons on the use of the word native as applied to Indians. Sanctimonious hypocrites declared that they would not object to be called natives of England "natives of Scotland," etc. But that was quite irrelevant, as nobody objects to calling himself or being called a native of his motherland. The point is, what is the meaning of the word "native" when used singly and separately to denote a human being. It means member of non-European or uncivilized race and has a contemptuous significance.

Bombing Aeroplanes and Thunderclouds

When the present writer was in Allahabad on the day of the last Ram Lila celebration (which could not come off for the third time in succession) an aeroplane was heard and seen to circle round over the heads of the human creatures dwelling in Allahabad. It was an amusing exhibition of unnecessary frightfulness as was also the march past of troops or military police.

When we heard and saw the aeroplane the thought struck us that it would be futile to expect that the people of India would remain overawed by bombing aeroplanes for any length of time. They do not object to thunderclouds and thunderbolts. Bombing aeroplanes would in their philosophy of resignation be only one more means of destruction. And it would not pay the British to be more and more frightful.

There is no doubt a difference between the god Indra's bolt and bombs dropped from the sky. Indra sends down rain as well as thunderbolts. Aeroplanes only drop down bombs they do not shower blessings.

Violent Co-operation and Non-violent Non-co-operation

It has been amply demonstrated that our British bureaucrats do not like non-violent

non co operation on the part of Indians, irrespective of their race, creed, colour etc. But it is believed by some persons that its high functionaries appreciate violent co operation when the violence is directed not against public servants of any rank but against certain sections of non officials. It is said that recently in a certain town would be violent co operators thought that they had received a hint in the speech of a high functionary that violent co operation on their part would not be appreciated, and that that fact averted the possibility of riots on a certain festive day.

The Land for Foreign Aircraft to Fly over

Aeroplanes belonging to various western peoples have been flying over India. But not a single Indian aeroplane has broken the solemn silence of our skies. That is one of the beauties of British rule.

Revolt against the Caste system

In the course of a recent speech against caste delivered at Kumbakonam Mr R. K. Shanmugam Chetty M. L. A. is reported to have said:

"The revolt against the caste system began with the awakening of the consciousness of self respect amongst the lower strata of society among those who have been kept down as inferior castes."

We welcome the revolt against caste and the awakening of the consciousness of self-respect amongst the lower strata of society. It must, however be said that Mr Chetty is wrong in his history. In modern times the revolt against caste originated in India with the Brahmo Samaj movement. Neither the founder nor the leaders of that movement were men belonging to the lower strata of society, to the castes kept down as inferior. Later, the Arya Samaj began to some extent the fight against caste. Its founder, too was not a man of 'low' caste. He was a Brahmin. It is not the business of this note to philosophise as to why those led the revolt against caste who did not themselves suffer from it. We do not know whether in Madras the Non Brahman social (or is it merely political) revolt against Brahmins has led the chettis and other non Brahmins to inter-dine and intermarry with castes considered inferior to them. It is a poor revolt which only wishes to rise but not also to raise.

Suggested Indian Overseas Department

Mr C. F. Andrews has contributed an article to the *Pioneer* urging that the Government of India should create a new department in order to deal chiefly with the colonies and Dominions. One reason given by him for this suggestion is that such a department would be able to pay continuous attention to the problems of Indians abroad. He points out that the ban placed on the immigration of Indians into Southern Rhodesia has been entirely overlooked. Another reason given by him that such an overseas Department would be 'an admirable training ground for Indian statesmanship within the large world of affairs outside India and would bring Indians abroad into much closer relationship'.

We would support the suggestion on condition that the department would be manned *by Indians, nationally at the top and that* the Indian head of the department would possess initiative and give effect to resolutions relating to Indians abroad carried in the Central Legislature. If it be not manned by Indians it would only provide soft jobs for Britishers and if its head has no initiative it would accept a position of inferiority for Indians everywhere, as the South African settlement has done in the case of Indians settled in South Africa.

No real palliative is unwelcome. But we feel that no palliatives can do us much good until we have self rule in India the present bureaucratic Government not being actively sympathetic.

Medical College Defalcation Case

It is both surprising and not surprising that though Mr Roxburgh, the Presidency Magistrate in his judgment in the Medical College defalcation case has severely criticised the conduct of Col. Bernardo the Principal of the College who appeared as a witness, he has punished only one of the clerks accused of the crime. The public feels that Government should at once remove Dr Bernardo from the principalship, if not also from the I. M. S. When the result of the convicted clerk's appeal is known, other steps may be suggested.

Of Mr Roxburgh's strictures on Dr Bernardo in his judgment the following is a brief summary taken from the *Bengalee* —

Of Mr Bernardo as a witness Mr Roxburgh has said that "every statement of fact he makes is

suspect that he fenced dodged, feinted denied and did not remember in a way he (the Magistrate) had seldom seen a witness do that it is difficult to accept his evidence on any point. That he did not show that he was prepared to be honest in the witness box, that he could not, in giving evidence, get out of the habits of the poker table which include making one believe what is not that he is a very unreliable witness and that he did not come into the box to deal openly with the Court, and that one of his statements in regard to the motor car incident is about as stout as he as was ever told in a witness box. These are the considered conclusions of a Magistrate who is convinced that Col. Barnardo is free of the vile reproach which the allegations made by the accused carry with them; they are therefore all the more damaging as a verdict on the record for justice or the respect due to a Court and to one's oath which actuated the Principal of the Calcutta Medical College when deposing on behalf of the Crown.

Honest British Journalism in India

The Bengalee observes —

It is one of the most regrettable features of public life in this country that the portions of the judgment which are most damaging to Col. Barnardo as a witness have been deliberately suppressed by both the *Statesman* and the *Englishman* papers which are often found to be laying down the rule of journalistic etiquette to their kind in contemporaries. The opinions which a British Magistrate has formed of the conduct of a senior European officer of the standing of Col. Barnardo have been of set purpose withheld from the European community in this country and from those abroad who rely on them for information regarding India. Those opinions are so glaringly incompatible with the plea of immaculate infallibility put forward at every step by apologists of the bureaucracy that they have not dared to face the music of Mr. Roxburgh's findings. Those whom a high sense of journalistic duty to the reading public of India forced to publish the despicable calumnies of the Mayo-Picher gang have out of a prudent regard for the prestige of the white man been restrained from publishing the judicial strictures against Col. Barnardo's conduct in the witness box.

Teaching of Hindi in Seeth India

In addition to the value of its literature, a knowledge of Hindi has economic importance throughout India, and political importance too. Of the vernaculars of India, Hindi is the most widely spoken. The majority of those who may be considered the mercantile and industrial classes in India speak, or in any case understand Hindi. These are some of the reasons why Hindi ought to be learnt by those who can afford to learn a second vernacular of India in addition to their mother tongue.

A brief account of the work of teaching

Hindi in South India from 1918 to 1927 issued by the Dakshina Bharat Hindi Prachar Sabha of Madras shows the progress which the movement has been making. It gives a list of 30 books in Hindi published in the *prachar* series, some of which have had very encouraging sales. The sales of some of the best sellers are 30,000 copies, 11,000 copies, 10,900 copies, 10,535 copies, 8850 copies, 7900 copies and 5250 copies. The total number of candidates who appeared at the seven different examinations of the Sabha from the years 1922 to 1927 were 464, 1136, 695, 987, 740 and 517 respectively.

Marriageable Age of Girls in Baroda

It is common knowledge that among the states in India ruled by Hindu Princes which passed laws fixing the minimum age of marriage years ago, Baroda is one. Recently, as the result of the inquiries and deliberations of a committee appointed to report on the old law, the minimum marriageable age of girls has been raised to 14. There are to be no exemptions. And those parents or other guardians who bring about the marriage of girls below 14 will be liable to imprisonment. The minimum marriageable age of males also has been raised.

The Inquirer's on Marriage Legislation in India

The Inquirer of London a high class religious weekly established in 1842, writes with reference to Mr. Harbilas Sarda's Hindu Child Marriage Bill.

The Government of India would appear to be powerless to interfere with the social customs of the Hindus based as they are upon religion, nevertheless the leaven of education is working and the fact that a private Bill to make the marriage age limits fifteen for boys and twelve for girls has been brought up in the Legislative Assembly and sent to a Select Committee is a sign of advance adequate though it seems to us. But the way of the legislators is of course being made very hard by the religious communities.

The London paper is misinformed in speaking of the powerlessness of the Government of India to interfere with the social customs of the Hindus. The custom of *suttee* or the immolation of widows on the funeral pyres of their dead husbands was based upon religion but that Government stopped it by legislation. The ban on the remarriage of widows was a socio religious custom but

Government made such marriages valid by law. There are examples which need not be mentioned. If English papers want to write on Indian topics, they ought to be accurately informed. Knowledge of things Indian does not come by intuition to Englishmen, nor because they are masters of India.

In order to illustrate its remark that the way of legislators being made very hard by the religious communities. *The Inquirer* refers to the pest issued by the Marwari Association against the Bill mentioned above. The Marwari Association certainly did protest. But it represents at the most a few thousand men. But 36 Hindu members of the Legislative Assembly supported the motion for referring the Bill to a select committee while only 17 Hindu members (including several who were Government servants) were of a different opinion. We speak only of Hindu members because the Bill is a Hindu Child Marriage Bill. This ought to suffice to show that the main opposition does not come from the religious communities.

The main opposition comes from the British Government of India. When Mr. Sarda's bill was introduced on the 1st February last the Hon. Sir Alexander Muddiman, the Home Member of the Government of India, said on behalf of the Government that he would oppose any other motion after motion for introduction other than a motion for circulation. For this reason Mr. Sarda spoke this in the Legislative Assembly on the 15th September last.

Sir, it was a surprise to me as it was to most people to see that a Government which professes to work for the good of the people, a Government that is representative of a nation that certainly is one of the most advanced in the world in wisdom and in the development of justice and freedom and claims to think rightly—that it has a great respect for womanhood—should take up such an attitude, and instead of welcoming and promising to support such essentially necessary legislation for children and helpless girls, declare its intent on to oppose it. (*Legislative Assembly Debates Vol. IV No. 32 page 4403*)

The Inquirer ought now to be able to judge who oppose the Hindu Child Marriage Bill.

Miss Mayo's 'Emphasis' Exaggerated

The Inquirer observes —

It seems clear that the emphasis laid by Miss Mayo on certain deplorable aspects of Indian life in her much discussed book *Mother India* is somewhat exaggerated, in so far as it seems to im-

agine a nation as her critics say for the bad practices of the least progressive sections of it. And a like other countries is still struggling to free herself from the fetters of a so-called religious system which though established in accordance with great and lofty ideals has been debased by gross superstitions and her enlightened reformers well know that far more formidable than the oppressiveness of English rule is the ignorance of their own people.

If our London contemporary keeps an open mind and reads Indian periodicals and newspapers it will also find that Miss Mayo's book contains many gross, his many half truths, some garbled quotations and many inaccuracies.

As for the comparative formidableness of the oppressiveness of English rule and the ignorance of the Indian people we should like to meet the enlightened Indian reformers who would and could support with proofs the dogmatic belief which *The Inquirer* credits them with. It is English rule which has passively and actively stood to the way of the dispelling of our people's ignorance.

Need of more Nurses, Midwives and Women Doctors

Srimati Padmabai Rao of the Hindu University President of the United Provinces Social Conference drew attention in her remarkable address to the need of the diffusion of the knowledge of the most vital facts among the masses and observed —

But the diffusion of this knowledge and the supplying of medical aid to the women of India requires a large number of trained doctors, nurses and midwives. It seems to me that a good deal of sentimentality exists in the mind of the public about the respectability of these professions and there are many parents who would be most unwilling to allow their daughters to render social service along these lines. This sentiment however is the result of a deep rooted instinct which considers it degrading to a woman to take up any work only for the sake of pecuniary gain. The only way to overcome these objections is to create a different attitude towards all social work. Personally I feel that all social work can become effective only when inspired by a spiritual ideal. Work which is done only for money is degrading both for man and woman alike. It becomes merely mechanical and therefore dead without the vitalising power of a great spiritual ideal. It is only when the relief of the suffering and the needy and the teaching of the ignorant are seen to be the truest service of God that we shall be able to eliminate all the degrading associations that have gathered round some of these professions. We must elevate them into true and holy vocations, those duties which the human soul feels called to perform by an impelling and divine inspiration from within.
